17605 Wright Street
Omaha, Nebraska 68130

This Statement of Additional Information (“SAI”) is not a prospectus. It should be read in conjunction with the Prospectus of the Context Insurance Linked Income Fund (the “Fund”) dated December 29, 2018 (“Prospectus”). The Fund is a separate series of the Mutual Fund and Variable Insurance Trust (“Trust”), an open-end management company organized as a Delaware Statutory Trust. The Prospectus is incorporated in its entirety into this SAI.

Copies of the Prospectus and the Fund’s Annual Report may be obtained at no charge from the Trust by writing to the above address or calling 800-253-0412.

CONTEXT INSURANCE LINKED INCOME FUND

The Trust is a Delaware statutory trust, which was formed on June 23, 2006. The Trust is registered under the 1940 Act, as an open-end management investment company. As of the date of this SAI, the Trust operates fourteen separate series or mutual funds – twelve retail portfolios and two variable annuity portfolios (the “VA Funds”), each with its own investment objective and strategy. The Fund is non-diversified. Much of the information contained in this SAI expands upon subjects discussed in the Fund’s Prospectus. No investment in units of beneficial interest (“Shares”) of a Fund should be made without first reading a Fund’s Prospectus.

Rational Advisors, Inc. (the "Advisor"), acts as investment advisor to the Fund.

Context Insurance Strategies, LLC (the “Sub-Advisor”) acts as the sub-advisor to the Fund

The Trust does not issue share certificates. All shares are held in non-certificate form registered on the books of the Trust and the Trust’s transfer agent for the account of the shareholder. Each share of a series represents an equal proportionate interest in the assets and liabilities belonging to the applicable class of that series and is entitled to such dividends and distributions out of income belonging to the applicable class of that series as are declared by the Trustees. The shares do not have cumulative voting rights or any preemptive or conversion rights, and the Trustees have the authority from time to time to divide or combine the shares of any series into a greater or lesser number of shares of that series so long as the proportionate beneficial interest in the assets belonging to that series and the rights of shares of any other series are in no way affected. In case of any liquidation of a series, the holders of shares of the series being liquidated will be entitled to receive as a class a distribution out of the assets, net of the liabilities, belonging to that series. Expenses attributable to any class of a series are borne by that class, and thus the net asset values per share of the classes may differ. There can be no assurance that a series will grow to an economically viable size, in which case the Trustees may determine to liquidate the series at a time that may not be opportune for shareholders. Any general expenses of the Trust not readily identifiable as belonging to a particular series are allocated by or under the direction of the Trustees in such manner as the Trustees determine to be fair and equitable. No shareholder is liable to further calls or to assessment by the Trust without his or her express consent.

The Fund has established three classes of shares: Class A, Class C and Institutional shares. Each share class represents an interest in the same assets of the Fund, has the same rights and is identical in all material respects except that (i) each class of shares may bear different distribution fees; (ii) each class of shares may be subject to different (or no) sales charges; (iii) certain other class specific expenses will be borne solely by the class to which such expenses are attributable; and (iv) each class has exclusive voting rights with respect to matters relating to its own distribution arrangements. The Board of Trustees (“Trustees”) may classify and reclassify the shares of the Fund into additional classes of shares at a future date.

INVESTMENT RESTRICTIONS

The Fund has adopted the following investment restrictions that may not be changed without approval by a “majority of the outstanding shares” of the Fund which, as used in this SAI, means the vote of the lesser of (a) 67% or more of the shares of the Fund represented at a meeting, if the holders of more than 50% of the outstanding shares of the Fund are present or represented by proxy, or (b) more than 50% of the outstanding shares of the Fund. The investment restrictions pertain to the Fund unless otherwise noted. Except as discussed below, the Fund will consider the investments of underlying investment companies when determining compliance with its own policy on concentration.

The Fund:

- (1) May not invest more than 25% of its net assets in a particular industry or group of industries; except that the Fund will invest over 25% of its net assets in the insurance industry. For this purpose, the Fund defines insurance industry as life insurers, property/casualty insurers, reinsurers, and entities issuing event-linked bonds (which includes special purpose vehicles (“SPV”).
- (2) May issue senior securities to the extent permitted by the 1940 Act, or the rules or regulations thereunder, as such statute, rules or regulations may be amended from time to time.

- (3) May lend or borrow money to the extent permitted by the 1940 Act, or the rules or regulations thereunder, as such statute, rules or regulations may be amended from time to time.
- (4) May purchase or sell commodities, commodities contracts, futures contracts, or real estate to the extent permitted by the 1940 Act, or the rules or regulations thereunder, as such statute, rules or regulations may be amended from time to time.
- (5) May underwrite securities to the extent permitted by the 1940 Act, or the rules or regulations thereunder, as such statute, rules or regulations may be amended from time to time.
- (6) May pledge, mortgage or hypothecate any of its assets to the extent permitted by the 1940 Act, or the rules or regulations thereunder, as such statute, rules or regulations may be amended from time to time.

If a restriction on the Fund's investments is adhered to at the time an investment is made, a subsequent change in the percentage of Fund assets invested in certain securities or other instruments, or change in average duration of the Fund's investment portfolio, resulting from changes in the value of the Fund's total assets, will not be considered a violation of the restriction.

With respect to investment limitation 3 above, if the Fund's asset coverage falls below 300%, the Fund will reduce borrowing within 3 days in order to ensure that the Fund has 300% asset coverage.

The fundamental limitations of the Fund have been adopted to avoid wherever possible the necessity of shareholder meetings otherwise required by the 1940 Act. This recognizes the need to react quickly to changes in the law or new investment opportunities in the securities markets and the cost and time involved in obtaining shareholder approvals for diversely held investment companies. However, certain Funds also have adopted non-fundamental limitations, set forth below, which in some instances may be more restrictive than their fundamental limitations. Any changes in the Fund's non-fundamental limitations will be communicated to the Fund's shareholders prior to effectiveness.

"Concentration" is generally interpreted under the 1940 Act to refer to an investment of more than 25% of net assets in an industry or group of industries. The 1940 Act limits the ability of investment companies to borrow and lend money and to underwrite securities. The 1940 Act currently prohibits an open-end fund from issuing senior securities, as defined in the 1940 Act, except under very limited circumstances.

Additionally, the 1940 Act limits the Fund's ability to borrow money, prohibiting the Fund from issuing senior securities, except the Fund may borrow from any bank provided that immediately after any such borrowing there is an asset coverage of at least 300% for all borrowings by the Fund and provided further, that in the event that such asset coverage shall at any time fall below 300%, the Fund shall, within three days thereafter or such longer period as the SEC may prescribe by rules and regulations, reduce the amount of its borrowings to such an extent that the asset coverage of such borrowing shall be at least 300%.

Regulatory Compliance. The Fund may follow non-fundamental operational policies that are more restrictive than its fundamental investment limitations, as set forth in the Prospectuses and this SAI, in order to comply with applicable laws and regulations, including the provisions of and regulations under the 1940 Act. The Fund may change these operational policies to reflect changes in the laws and regulations without the approval of its shareholders.

OTHER INVESTMENT POLICIES

The following investment limitations are non-fundamental policies of the Fund, which may be changed without shareholder approval:

- (1) The Fund will not invest more than 15% of net assets in securities for which there are legal or contractual restrictions on resale or other illiquid securities.
- (2) Under normal circumstances, insurance-related investments will compose at least 80% of the Fund's net assets (plus borrowings for investment purposes).

ADDITIONAL INFORMATION ABOUT INVESTMENTS AND RISKS

The Prospectus for the Fund discusses the principal investment strategies of the Fund and the underlying Funds. Below you will find more detail about the types of investments and investment practices permitted by the Fund, including the underlying Funds, including those which are not part of the Fund's and/or underlying Fund's principal investment strategy.

Adjustable Rate Notes and Variable and Floating Rate Instruments

Adjustable rate notes include variable rate notes and floating rate notes. For Money Market Fund purposes, a variable rate note is one whose terms provide for the readjustment of its interest rate on set dates and that, upon such readjustment, can reasonably be expected to have a market value that approximates its amortized cost. The degree to which a variable rate note's market value approximates its amortized cost subsequent to readjustment will depend on the frequency of the readjustment of the note's interest rate and the length of time that must elapse before the next readjustment. A floating rate note is one whose terms provide for the readjustment of its interest rate whenever a specified interest rate changes and that, at any time, can reasonably be expected to have a market value that approximates its amortized cost. Variable or floating rate securities may have provisions that allow them to be tendered back to remarketing agents at par value plus accrued interest. Liquidity for these securities is provided by irrevocable letters of credit and stand-by purchase agreements. The absence of an active secondary market, however, could make it difficult for the Fund to dispose of a variable or floating rate note in the event the issuer of the note defaulted on its payment obligations and the Fund could, as a result or for other reasons, suffer a loss to the extent of the default. Variable or floating rate notes may be secured by bank letters of credit or insured as to payment of principal and interest. A demand instrument with a demand notice period exceeding seven days may be considered illiquid if there is no secondary market for such security. Such security will be subject to the Fund's limitation governing investments in "illiquid" securities, unless such notes are subject to a demand feature that will permit the Fund to receive payment of the principal within seven days of the Fund's demand. See "INVESTMENT RESTRICTIONS" below.

American Depositary Receipts (ADRs), European Depositary Receipts (EDRs), Continental Depositary Receipts (CDRs) and Global Depositary Receipts (GDRs)

ADRs are securities, typically issued by a U.S. financial institution (a "depository"), that evidence ownership interests in a security or a pool of securities issued by a foreign issuer and deposited with the depository. ADRs include American Depositary Shares and New York Shares. EDRs, which are sometimes referred to as CDRs, are securities, typically issued by a non-U.S. financial institution, that evidence ownership interests in a security or a pool of securities issued by either a U.S. or foreign issuer. GDRs are issued globally and evidence a similar ownership arrangement. Generally, ADRs are designed for trading in the U.S. securities markets, EDRs are designed for trading in European securities markets and GDRs are designed for trading in non-U.S. securities markets. ADRs, EDRs, CDRs and GDRs may be available for investment through "sponsored" or "unsponsored" facilities. A sponsored facility is established jointly by the issuer of the security underlying the receipt and a depository, whereas an unsponsored facility may be established by a depository without participation by the issuer of the receipt's underlying security. Holders of an unsponsored depository receipt generally bear all the costs of the unsponsored facility. The depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through to the holders of the receipts voting rights with respect to the deposited securities.

Asset-backed Securities (Non-mortgage)

Asset-backed securities are instruments secured by company receivables, truck and auto loans, leases, and credit card receivables. Such securities are generally issued as pass-through certificates, which represent undivided fractional ownership interests in the underlying pools of assets. Such securities also may be debt instruments, which are also known as collateralized obligations and are generally issued as the debt of a special purpose entity, such as a trust, organized solely for the purpose of owning such assets and issuing such debt.

The purchase of non-mortgage asset-backed securities raises risk considerations particular to the financing of the instruments underlying such securities. Like mortgages underlying mortgage-backed securities, underlying automobile sales contracts or credit card receivables are subject to substantial prepayment risk, which may reduce the overall return to certificate holders. Nevertheless, principal prepayment rates tend not to vary as much in response to changes in interest rates and the short-term nature of the underlying car loans or other receivables tend to dampen the

impact of any change in the prepayment level. Certificate holders may also experience delays in payment on the certificates if the full amounts due on underlying sales contracts or receivables are not realized by the trust because of unanticipated legal or administrative costs of enforcing the contracts or because of depreciation or damage to the collateral (usually automobiles) securing certain contracts, or other factors.

Certificates of Deposit

For a discussion of Certificates of Deposit, please see the “Money Market Instruments” discussion in this section.

Commercial Paper

For a discussion of Commercial Paper, please see the “Money Market Instruments” discussion in this section.

Common Stock

Common stock is a type of equity security which represents an ownership interest in a corporation and the right to a portion of the assets of the corporation in the event of liquidation. This right, however, is subordinate to that of preferred stockholders and any creditors, including holders of debt issued by the corporation. Owners of common stock are generally entitled to vote on important matters. A corporation may pay dividends on common stock.

Convertible Securities

Convertible securities include fixed income securities that may be exchanged or converted into a predetermined number of shares of the issuer’s underlying common stock at the option of the holder during a specified period. Convertible securities may take the form of convertible preferred stock, convertible bonds or debentures, units consisting of “usable” bonds and warrants or a combination of the features of several of these securities. The investment characteristics of each convertible security vary widely, which allows convertible securities to be employed for a variety of investment strategies. The Fund will exchange or convert the convertible securities held in its portfolio into shares of the underlying common stock when, in the Advisor’s opinion, the investment characteristics of the underlying common shares will assist the Fund in achieving its investment objective. Otherwise the Fund may hold or trade convertible securities.

Corporate Debt (Including Bonds, Notes and Debentures)

Corporate debt includes any obligation of a corporation to repay a borrowed amount at maturity and usually to pay the holder interest at specific intervals. Corporate debt can have a long or short maturity and is often rated by one or more Nationally Recognized Statistical Rating Organizations (“NRSROs”). See “**INVESTMENT RATINGS**” below for a description of these ratings.

In addition, the credit risk of an issuer’s debt security may vary based on its priority for repayment. For example, higher ranking (senior) debt securities have a higher priority than lower ranking (subordinated) securities. This means that the issuer might not make payments on subordinated securities while continuing to make payments on senior securities. In addition, in the event of bankruptcy, holders of senior securities may receive amounts otherwise payable to the holders of subordinated securities. Some subordinated securities, such as trust preferred and capital securities notes, also permit the issuer to defer payments under certain circumstances. For example, insurance companies issue securities known as surplus notes that permit the insurance company to defer any payment that would reduce its capital below regulatory requirements.

Credit-Enhanced Securities

Credit-enhanced securities are securities whose credit rating has been enhanced, typically by the existence of a guarantee, letter of credit, insurance or unconditional demand feature. In most cases, the Advisor evaluates the credit quality and ratings of credit-enhanced securities based upon the financial condition and ratings of the party providing the credit enhancement (the “credit enhancer”) rather than the issuer. However, except where prohibited by Rule 2a-7 under the 1940 Act, credit-enhanced securities will not be treated as having been issued by the credit enhancer for diversification purposes, unless the Fund has invested more than 10% of its assets in securities issued, guaranteed or otherwise credit enhanced by the credit enhancer, in which case the securities will be treated as having been issued both by the issuer and the credit enhancer. The bankruptcy, receivership or default of the credit enhancer will adversely

affect the quality and marketability of the underlying security. A default on the underlying security or other event that terminates a demand feature prior to its exercise will adversely affect the liquidity of the underlying security.

Defensive Investments

At times the Advisor or Sub-Advisor may determine that conditions in securities markets may make pursuing the Fund's principal investment strategies inconsistent with the best interests of the Fund's shareholders. At such times, the Advisor or Sub-Advisor may temporarily use alternative strategies, primarily designed to reduce fluctuations in the value of the Fund's assets. In implementing these temporary "defensive" strategies, the Fund may temporarily place all or a portion of its assets in cash, U.S. Government securities, debt securities which the Advisor or Sub-Advisor considers to be of comparable quality to the acceptable investments of the Fund and other investments which the Advisor or Sub-Advisor considers consistent with such strategies.

Demand Notes

For a discussion of Demand Notes, please see the "Money Market Instruments" discussion in this section.

Derivative Contracts

Derivative contracts are financial instruments that require payments based upon changes in the values of designated (or underlying) securities, currencies, commodities, financial indices or other assets. Some derivative contracts (such as futures, forwards and options) require payments relating to a future trade involving the underlying asset. Other derivative contracts (such as swaps) require payments relating to the income or returns from the underlying asset. The other party to a derivative contract is referred to as a counterparty.

Depending upon how the Fund uses derivative contracts and the relationships between the market value of a derivative contract and the underlying asset, derivative contracts may increase or decrease the Fund's exposure to interest rate and currency risks, and may also expose the Fund to liquidity and leverage risks. Over-the-counter ("OTC") contracts also expose the Fund to credit risks in the event that a counterparty defaults on the contract.

Equity Securities

Equity securities include both foreign and domestic common stocks, preferred stocks, securities convertible or exchangeable into common or preferred stocks, and other securities which the Advisor or Sub-Advisor believes have common stock characteristics, such as rights and warrants.

Exchange-Traded Commodity Funds ("ETCFs")

ETCFs invest in commodities, either directly or through derivative contracts and are treated as partnerships or grantor trusts for U.S. tax purposes. ETCFs may invest in a single commodity (such as gold) or manage a pool of derivative contracts that tracks a commodity index (such as the Dow Jones-AIG Commodity Index).

Exchange-Traded Funds ("ETFs")/Index-Based Securities and Ultrashort ETFs

The Fund may invest in ETFs or Index-based Securities and Ultrashort ETFs as an efficient means of carrying out their investment strategies. Index-based securities are often interests in a unit investment trust ("UIT") that may be obtained from the UIT or purchased in the secondary market. ETFs may be structured as a UIT, but may also be structured as an open-end mutual fund. Ultrashort ETFs are exchange-traded funds which are designed to correspond to twice the inverse of the daily performance of an underlying index. Ultrashort ETFs invest in financial instruments (including derivatives) which the advisor to the Ultrashort ETF believes should, in combination, achieve such daily return characteristics. As with index-based securities, ETFs sell their interests directly or the interests may be purchased in a secondary market. ETFs, index-based securities and Ultrashort ETFs are traded on stock exchanges or on the over-the-counter market.

As with traditional mutual funds, ETFs and index-based securities charge asset-based fees, although these fees tend to be relatively low. ETFs and index-based securities do not charge initial sales charges or redemption fees and investors pay only customary brokerage fees to buy and sell the shares.

A UIT will generally issue index-based securities in aggregations of 50,000 known as “Creation Units” in exchange for a “Portfolio Deposit” consisting of (a) a portfolio of securities substantially similar to the component securities (Index Securities) of the applicable index (Index), (b) a cash payment equal to a pro rata portion of the dividends accrued on the UIT’s portfolio securities since the last dividend payment by the UIT, net of expenses and liabilities, and (c) a cash payment or credit (Balancing Amount) designed to equalize the net asset value (“NAV”) of the Index and the NAV of a Portfolio Deposit. ETFs structured as mutual funds also issue large Creation Units in exchange for a basket of securities in a proportion similar to the current holdings of the ETF and/or a cash payment.

ETFs and index-based securities are not individually redeemable, except upon termination of the UIT or ETF. To redeem, the portfolio must accumulate enough index-based securities to reconstitute a Creation Unit (large aggregations of a particular index-based security). The liquidity of small holdings of ETFs and index-based securities, therefore, will depend upon the existence of a secondary market. Upon redemption of a Creation Unit, the portfolio will receive Index Securities and cash identical to the Portfolio Deposit required of an investor wishing to purchase a Creation Unit that day.

Fixed Income Securities

Fixed income securities include corporate debt securities, U.S. Government securities, mortgage-related securities, tax-exempt securities and any other securities which provide a stream of fixed payments to the holder.

Foreign Currency Options (also see “Options”)

Options on foreign currencies operate similarly to options on securities, and are traded primarily in the over-the-counter market (so-called “OTC options”), although options on foreign currencies have recently been listed on several exchanges. Options will be purchased or written only when the Advisor or Sub-Advisor believes that a liquid secondary market exists for such options. There can be no assurance that a liquid secondary market will exist for a particular option at any specific time. Options on foreign currencies are affected by all of those factors which influence exchange rates and investments generally.

Purchases and sales of options may be used to increase current return. They are also used in connection with hedging transactions. See “Foreign Currency Transactions.” Writing covered call options on currencies may offset some of the costs of hedging against fluctuations in currency exchange rates. For transaction hedging purposes, the Fund may also purchase exchange-listed and OTC put and call options on foreign currency futures contracts and on foreign currencies. A put option on a futures contract gives the Fund the right to assume a short position in the futures contract until expiration of the option. A call option on a futures contract gives the Fund the right to assume a long position in the futures contract until the expiration of the option.

The value of a foreign currency option is dependent upon the value of the foreign currency and the U.S. dollar, and may have no relationship to the investment merits of a foreign security. Because foreign currency transactions occurring in the interbank market involve substantially larger amounts than those that may be involved in the use of foreign currency options, investors may be disadvantaged by having to deal in an odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last sale information for foreign currencies and there is no regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Available quotation information is generally representative of very large transactions in the interbank market and thus may not reflect relatively smaller transactions (less than \$1 million) where rates may be less favorable. The interbank market in foreign currencies is a global, around-the-clock market. To the extent that the U.S. options markets are closed while the markets for the underlying currencies remain open, significant price and rate movements may take place in the underlying markets that cannot be reflected in the U.S. options markets. Options contracts are generally valued at the mean of the bid and asked price as reported on the highest-volume exchange (in terms of the number of option contracts traded for that issue) on which such options are traded.

Foreign Currency Transactions and Foreign Exchange Contracts

Foreign currency transactions and foreign exchange contracts include purchasing and selling foreign currencies, entering into forward or futures contracts to purchase or sell foreign currencies (see “Forward Foreign Currency and Foreign Currency Futures Contracts”), and purchasing and selling options on foreign currencies (see “Foreign Currency Options”). Foreign currency transactions may be used to hedge against uncertainty in the level of future foreign currency exchange rates and to increase current return.

Purchases and sales of foreign currencies on a spot basis are used to increase current return. They are also used in connection with both “transaction hedging” and “position hedging.”

Transaction hedging involves entering into foreign currency transactions with respect to specific receivables or payables generally arising in connection with the purchase or sale of portfolio securities. Transaction hedging is used to “lock in” the U.S. dollar price of a security to be purchased or sold, or the U.S. dollar equivalent of a dividend or interest payment in a foreign currency. The goal is to protect against a possible loss resulting from an adverse change in the relationship between the U.S. dollar and the applicable foreign currency during the period between the date on which the security is purchased or sold or on which the dividend or interest payment is declared, and the date on which such payments are made or received.

Position hedging involves entering into foreign currency transactions either to protect against: (i) a decline in the value of a foreign currency in which a security held or to be sold is denominated; or (ii) an increase in the value of a foreign currency in which a security to be purchased is denominated. In connection with position hedging, the Fund may purchase put or call options on foreign currency and foreign currency futures contracts and buy or sell forward contracts and foreign currency futures contracts.

Neither transaction nor position hedging eliminates fluctuations in the underlying prices of the securities which the Fund owns or intends to purchase or sell. They simply establish a rate of exchange which can be achieved at some future point in time. Additionally, although these techniques tend to minimize the risk of loss due to a decline in the value of the hedged currency, they also tend to limit any potential gain which might result from the increase in the value of such currency.

Hedging transactions are subject to correlation risk due to the fact that the amounts of foreign currency exchange transactions and the value of the portfolio securities involved will not generally be perfectly matched. This is because the future value of such securities in foreign currencies will change as a consequence of market movements in the values of those securities between the dates the currency exchange transactions are entered into and the dates they mature.

Forward Foreign Currency and Foreign Currency Futures Contracts

A forward foreign currency contract involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract as agreed by the parties, at a price set at the time of the contract. In the case of a cancelable forward contract, the holder has the unilateral right to cancel the contract at maturity by paying a specified fee. The contracts are traded in the interbank market conducted directly between currency traders (usually large commercial banks) and their customers. A forward contract generally has no deposit requirement, and no commissions are charged at any stage for trades.

A foreign currency futures contract is a standardized contract for the future delivery of a specified amount of a foreign currency at a future date at a price set at the time of the contract. Foreign currency futures contracts traded in the United States are designed by and traded on exchanges regulated by the Commodity Futures Trading Commission (“CFTC”), such as the New York Mercantile Exchange.

Forward foreign currency contracts differ from foreign currency futures contracts in certain respects. For example, the maturity date of a forward contract may be any fixed number of days from the date of the contract agreed upon by the parties, rather than a predetermined date in a given month. Forward contracts may be in any amounts agreed upon by the parties rather than predetermined amounts. Also, forward foreign currency contracts are traded directly between currency traders so that no intermediary is required. A forward contract generally requires no margin or other deposit.

At the maturity of a forward or futures contract, the Fund may either accept or make delivery of the currency specified in the contract, or at or prior to maturity enter into a closing transaction involving the purchase or sale of an offsetting contract. Closing transactions with respect to forward contracts are usually effected with the currency trader who is a

party to the original forward contract. Closing transactions with respect to futures contracts are effected on a commodities exchange; a clearing corporation associated with the exchange assumes responsibility for closing out such contracts.

Forward foreign currency contracts and foreign currency futures contracts can be used to increase current return. They are also used in connection with both “transaction hedging” and “position hedging.” See “Foreign Currency Transactions.”

Among the risks of using foreign currency futures contracts is the fact that positions in these contracts (and any related options) may be closed out only on an exchange or board of trade which provides a secondary market. Although it is intended that any Fund using foreign currency futures contracts and related options will only purchase or sell them on exchanges or boards of trade where there appears to be an active secondary market, there is no assurance that a secondary market on an exchange or board of trade will exist for any particular contract or option or at any particular time. In such event, it may not be possible to close a futures or related option position and, in the event of adverse price movements, the Fund would continue to be required to make daily cash payments of variation margin on its futures positions.

In addition, it is impossible to forecast with precision the market value of a security at the expiration or maturity of a forward or futures contract. Accordingly, it may be necessary to purchase additional foreign currency on the spot market (and bear the expense of such purchase) if the market value of the security being hedged is less than the amount of foreign currency the Fund is obligated to deliver and if a decision is made to sell the security and make delivery of the foreign currency. Conversely, it may be necessary to sell on the spot market some of the foreign currency received upon the sale of the hedged portfolio security if the market value of such security exceeds the amount of foreign currency the Fund is obligated to deliver.

Margin payments. When the Fund purchases or sells a futures contract, it is required to deposit with its custodian an amount of cash or U.S. Treasury bills, or other permissible collateral, up to 5% of the amount of the futures contract. This amount is known as “initial margin.” The nature of initial margin is different from that of margin in security transactions in that it does not involve borrowing money to finance transactions. Rather, initial margin is similar to a performance bond or good faith deposit that is returned to the Fund upon termination of the contract, assuming the Fund satisfies its contractual obligation.

Subsequent payments to and from the broker occur on a daily basis in a process known as “marking to market.” These payments are called “variation margin,” and are made as the value of the underlying futures contract fluctuates. For example, when the Fund sells a futures contract and the price of the underlying currency rises above the delivery price, the Fund’s position declines in value. The Fund then pays a broker a variation margin payment equal to the difference between the delivery price of the futures contract and the market price of the currency underlying the futures contract. Conversely, if the price of the underlying currency falls below the delivery price of the contract, the Fund’s futures position increases in value. The broker then must make a variation margin payment equal to the difference between the delivery price of the futures contract and the market price of the currency underlying the futures contract.

When the Fund terminates a position in a futures contract, a final determination of variation margin is made, additional cash is paid by or to the Fund, and the Fund realizes a loss or gain. Such closing transactions involve additional commission costs.

Foreign Government Securities

Foreign government securities generally consist of fixed income securities supported by national, state or provincial governments or similar political subdivisions. Foreign government securities also include debt obligations of supranational entities, such as international organizations designed or supported by governmental entities to promote economic reconstruction or development, international banking institutions and related government agencies. Examples of these include, but are not limited to, the International Bank for Reconstruction and Development (the “World Bank”), the Asian Development Bank, the European Investment Bank and the Inter-American Development Bank.

Foreign government securities also include fixed income securities of quasi-governmental agencies that are either issued by entities owned by a national, state or equivalent government or are obligations of a political unit that are not backed by the national government’s full faith and credit.

Foreign Securities (including Emerging Markets)

Foreign securities are those securities which are issued by companies located outside the United States and principally traded in foreign markets. This includes equity and debt securities of foreign entities and obligations of foreign branches of U.S. and foreign banks. Permissible investments may consist of obligations of foreign branches of U.S. banks and foreign or domestic branches of foreign banks, including European Certificates of Deposit, European Time Deposits, Canadian Time Deposits and Yankee Bonds and Certificates of Deposit, and investments in Canadian Commercial Paper, foreign securities and europaper. In addition, the Fund may invest in depositary receipts. The Fund may also invest in securities issued or guaranteed by foreign corporations or foreign governments, their political subdivisions, agencies or instrumentalities and obligations of supranational entities such as the World Bank and the Asian Development Bank. Investment in foreign securities is subject to a number of special risks.

Since foreign securities are normally denominated and traded in foreign currencies, the value of the Fund's assets invested in such securities may be affected favorably or unfavorably by currency exchange rates and exchange control regulation. Exchange rates with respect to certain currencies may be particularly volatile. Additionally, although foreign exchange dealers do not charge a fee for currency conversion, they do realize a profit based on the difference (the "spread") between prices at which they buy and sell various currencies. Thus, a dealer may offer to sell a foreign currency to the Fund at one rate, while offering a lesser rate of exchange should the Fund desire to resell that currency to the dealer. For additional information see "Foreign Currency Transactions."

There may be less information publicly available about a foreign company than about a U.S. company, and foreign companies are not generally subject to accounting, auditing, and financial reporting standards and practices comparable to those in the United States. The securities of some foreign companies are less liquid and at times more volatile than securities of comparable U.S. companies. Foreign brokerage commissions and other fees are also generally higher than in the United States. Foreign settlement procedures and trade regulations may involve certain risks (such as delays in payment or delivery of securities or in the recovery of the Fund's assets held abroad) and expenses not present in the settlement of domestic investments.

In addition, with respect to certain foreign countries, there is a possibility of nationalization or expropriation of assets, confiscatory taxation, political or financial instability and diplomatic developments which could affect the value of investments in those countries. In certain countries, legal remedies available to investors may be more limited than those available with respect to investments in the United States or other countries. The laws of some foreign countries may limit the Fund's ability to invest in securities of certain issuers located in those countries. Special tax considerations apply to foreign securities.

The Fund may invest in the securities of emerging market issuers. Investing in emerging market securities involves risks which are in addition to the usual risks inherent in foreign investments. Some emerging markets countries may have fixed or managed currencies that are not free-floating against the U.S. dollar. Further, certain currencies may not be traded internationally. Certain of these currencies have experienced a steady devaluation relative to the U.S. dollar. Any devaluation in the currencies in which the Fund's securities are denominated may have a detrimental impact on the Fund.

Some countries with emerging securities markets have experienced substantial, and in some periods, extremely high, rates of inflation for many years. Inflation and rapid fluctuation in inflation rates have had and may continue to have negative effects on the economies and securities markets of certain countries. Moreover, the economies of some countries may differ favorably or unfavorably from the U.S. economy in such respects as rate of growth of gross domestic product, the rate of inflation, capital reinvestment, resource self-sufficiency, number and depth of industries forming the economy's base, governmental controls and investment restrictions that are subject to political change and balance of payments position. Further, there may be greater difficulties or restrictions with respect to investments made in emerging markets countries.

Emerging markets typically have substantially less volume than U.S. markets. In addition, securities in many such markets are less liquid, and their prices often are more volatile, than securities of comparable U.S. companies. Such markets often have different clearance and settlement procedures for securities transactions, and in some markets there have been times when settlements have been unable to keep pace with the volume of transactions, making it difficult to conduct transactions. Delays in settlement could result in temporary periods when assets may be uninvested. Settlement problems in emerging markets countries also could cause the Fund to miss attractive investment

opportunities. Satisfactory custodial services may not be available in some emerging markets countries, which may result in the Fund incurring additional costs and delays in the transportation and custody of such securities.

The Fund may invest in foreign securities.

Futures Contracts and Options on Futures Contracts

A futures contract is a binding contractual commitment which, if held to maturity, will result in an obligation to make or accept delivery of a security at a specified future time and price. By purchasing futures (assuming a “long” position) the Fund will legally obligate itself to accept the future delivery of the underlying security and pay the agreed price. By selling futures (assuming a “short” position) it will legally obligate itself to make the future delivery of the security against payment of the agreed price. Open futures positions on debt securities will be valued at the most recent settlement price, unless that price does not in the judgment of the Trustees reflect the fair value of the contract, in which case the positions will be valued by or under the direction of the Trustees. Positions taken in the futures markets are not normally held to maturity, but are instead liquidated through offsetting transactions which may result in a profit or a loss. While futures positions taken by the Fund will usually be liquidated in this manner, the Fund may instead make or take delivery of the underlying securities whenever it appears economically advantageous to the Fund to do so. A clearing corporation associated with the exchange on which futures are traded assumes responsibility for such closing transactions and guarantees that the Fund’s sale and purchase obligations under closed-out positions will be performed at the termination of the contract. Futures contracts are considered to be commodity contracts.

Futures and options on futures are regulated by the CFTC.

Hedging by use of futures on debt securities seeks to establish more certainty than would otherwise be possible the effective rate of return on portfolio securities. The Fund may, for example, take a “short” position in the futures market by selling contracts for the future delivery of debt securities held by the Fund (or securities having characteristics similar to those held by the Fund) in order to hedge against an anticipated rise in interest rates that would adversely affect the value of the Fund’s portfolio securities. When hedging of this character is successful, any depreciation in the value of portfolio securities may be offset by appreciation in the value of the futures position.

On other occasions, the Fund may take a “long” position by purchasing futures on debt securities. This would be done, for example, when the Advisor or Sub-Advisor expects to purchase for the Fund particular securities when it has the necessary cash, but expects the rate of return available in the securities markets at that time to be less favorable than rates currently available in the futures markets. If the anticipated rise in the price of the securities should occur (with its corresponding reduction in yield), the increased cost to the Fund of purchasing the securities may be offset by the rise in the value of the futures position taken in anticipation of the subsequent securities purchase.

Successful use by the Fund of futures contracts on debt securities is subject to the Advisor’s or Sub-Advisor’s ability to predict correctly movements in the direction of interest rates and other factors affecting markets for debt securities. For example, if the Fund has hedged against the possibility of an increase in interest rates which would adversely affect the market prices of debt securities held by it and the prices of such securities increase instead, the Fund will lose part or all of the benefit of the increased value of its securities which it has hedged because it will have offsetting losses in its futures positions. In addition, in such situations, if the Fund has insufficient cash, it may have to sell securities to meet daily margin maintenance requirements. The Fund may have to sell securities at a time when it may be disadvantageous to do so.

The Fund may purchase and write put and call options on debt futures contracts, as they become available. Such options are similar to options on securities except that options on futures contracts give the purchaser the right, in return for the premium paid, to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put) at a specified exercise price at any time during the period of the option. As with options on securities, the holder or writer of an option may terminate its position by selling or purchasing an option of the same series. There is no guarantee that such closing transactions can be effected. The Fund will be required to deposit initial margin and variation margin with respect to put and call options on futures contracts written by it pursuant to brokers’ requirements, and, in addition, net option premiums received will be included as initial margin deposits. Compared to the purchase or sale of futures contracts, the purchase of call or put options on futures contracts involves less potential risk to the Fund because the maximum amount at risk is the premium paid for the options plus transactions costs. However, there may be circumstances when the purchases of call or put options on a futures contract would result in a loss to the Fund when the purchase or sale of the futures contracts would not, such as when there is

no movement in the prices of debt securities. The writing of a put or call option on a futures contract involves risks similar to those risks relating to the purchase or sale of futures contracts.

Margin payments. When the Fund purchases or sells a futures contract, it is required to deposit with its custodian an amount of cash, U.S. Treasury bills, or other permissible collateral equal to a small percentage of the amount of the futures contract. This amount is known as “initial margin.” The nature of initial margin is different from that of margin in security transactions in that it does not involve borrowing money to finance transactions. Rather, initial margin is similar to a performance bond or good faith deposit that is returned to the Fund upon termination of the contract, assuming the Fund satisfies its contractual obligations. Subsequent payments to and from the broker occur on a daily basis in a process known as “marking to market.” These payments are called “variation margin” and are made as the value of the underlying futures contract fluctuates. For example, when the Fund sells a futures contract and the price of the underlying debt security rises above the delivery price, the Fund’s position declines in value. The Fund then pays the broker a variation margin payment equal to the difference between the delivery price of the futures contract and the market price of the securities underlying the futures contract. Conversely, if the price of the underlying security falls below the delivery price of the contract, the Fund’s futures position increases in value. The broker then must make a variation margin payment equal to the difference between the delivery price of the futures contract and the market price of the securities underlying the futures contract.

When the Fund terminates a position in a futures contract, a final determination of variation margin is made, additional cash is paid by or to the Fund, and the Fund realizes a loss or a gain. Such closing transactions involve additional commission costs.

Liquidity risks. Positions in futures contracts may be closed out only on an exchange or board of trade which provides a secondary market for such futures. Although the Trust intends to purchase or sell futures only on exchanges or boards of trade where there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange or board of trade will exist for any particular contract or at any particular time. If there is not a liquid secondary market at a particular time, it may not be possible to close a futures position at such time and, in the event of adverse price movements, the Fund would continue to be required to make daily cash payments of variation margin. However, in the event financial futures are used to hedge portfolio securities, such securities will not generally be sold until the financial futures can be terminated. In such circumstances, an increase in the price of the portfolio securities, if any, may partially or completely offset losses on the financial futures.

In addition to the risks that apply to all options transactions, there are several special risks relating to options on futures contracts. The ability to establish and close out positions in such options will be subject to the development and maintenance of a liquid secondary market. It is not certain that such a market will develop. Although the Fund generally will purchase only those options for which there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange will exist for any particular option or at any particular time. In the event no such market exists for particular options, it might not be possible to effect closing transactions in such options, with the result that the Fund would have to exercise the options in order to realize any profit.

Hedging risks. There are several risks in connection with the use by the Fund of futures contracts and related options as a hedging device. One risk arises because of the imperfect correlation between movements in the prices of the futures contracts and options and movements in the prices of securities which are the subject of the hedge. The Advisor will, however, attempt to reduce this risk by purchasing and selling, to the extent possible, futures contracts and related options on securities and indices the movements of which will, in its judgment, correlate closely with movements in the prices of the portfolio securities sought to be hedged.

Successful use of futures contracts and options by the Fund for hedging purposes is also subject to the Advisor’s or Sub-Advisor’s ability to predict correctly movements in the direction of the market. It is possible that, where the Fund has purchased puts on futures contracts to hedge its portfolio against a decline in the market, the securities or index on which the puts are purchased may increase in value and the value of securities held in the portfolio may decline. If this occurred, the Fund would lose money on the puts and also experience a decline in value in its portfolio securities. In addition, the prices of futures, for a number of reasons, may not correlate perfectly with movements in the underlying securities or index due to certain market distortions. First, all participants in the futures market are subject to margin deposit requirements. Such requirements may cause investors to close futures contracts through offsetting transactions which could distort the normal relationship between the underlying security or index and futures markets. Second, the margin requirements in the futures markets are less onerous than margin requirements in the securities

markets in general, and as a result the futures markets may attract more speculators than the securities markets do. Increased participation by speculators in the futures markets may also cause temporary price distortions. Due to the possibility of price distortion, even a correct forecast of general market trends by the Advisor or Sub-Advisor may still not result in a successful hedging transaction over a very short time period.

Other risks. The Fund will incur brokerage fees in connection with their futures and options transactions. In addition, while futures contracts and options on futures will be purchased and sold to reduce certain risks, those transactions themselves entail certain other risks. Thus, while the Fund may benefit from the use of futures and related options, unanticipated changes in interest rates or stock price movements may result in a poorer overall performance for the Fund than if it had not entered into any futures contracts or options transactions. Moreover, in the event of an imperfect correlation between the futures position and the portfolio position which is intended to be protected, the desired protection may not be obtained and the Fund may be exposed to risk of loss.

Index Futures Contracts and Options on Index Futures Contracts

A debt index futures contract is a contract to buy or sell units of a specified debt index at a specified future date at a price agreed upon when the contract is made. A unit is the current value of the index. A stock index futures contract is a contract to buy or sell units of a stock index at a specified future date at a price agreed upon when the contract is made. A unit is the current value of the stock index.

The following example illustrates generally the manner in which index futures contracts operate. The Standard & Poor's 100 Stock Index (S&P 100) is composed of 100 selected common stocks, most of which are listed on the New York Stock Exchange (NYSE). The S&P 100 assigns relative weightings to the common stocks included in the Index, and the Index fluctuates with changes in the market values of those common stocks. In the case of the S&P 100, contracts are to buy or sell 100 units. Thus, if the value of the S&P 100 were \$180, one contract would be worth \$18,000 (100 units X \$180). The stock index futures contract specifies that no delivery of the actual stocks making up the index will take place. Instead, settlement in cash must occur upon the termination of the contract, with the settlement being the difference between the contract price and the actual level of the stock index at the expiration of the contract. For example, if the Fund enters into a futures contract to buy 100 units of the S&P 100 at a specified future date at a contract price of \$180 and the S&P 100 is at \$184 on that future date, the Fund will gain \$400 (100 units X gain of \$4). If the Fund enters into a futures contract to sell 100 units of the stock index at a specified future date at a contract price of \$180 and the S&P 100 is at \$182 on that future date, the Fund will lose \$200 (100 units X loss of \$2). The Fund may purchase or sell futures contracts with respect to any stock index. Positions in index futures may be closed out only on an exchange or board of trade which provides a secondary market for such futures.

Purchases and sales of index futures may be used to hedge an investment. To hedge an investment successfully, however, the Fund must invest in futures contracts with respect to indices or sub-indices the movements of which will have a significant correlation with movements in the prices of the Fund's securities.

Options on index futures contracts are similar to options on securities except that options on index futures contracts give the purchaser the right, in return for the premium paid, to assume a position in an index futures contract (a long position if the option is a call and a short position if the option is a put) at a specified exercise price at any time during the period of the option. Upon exercise of the option, the holder assumes the underlying futures position and receives a variation margin payment of cash or securities approximating the increase in the value of the holder's option position. If an option is exercised on the last trading day prior to the expiration date of the option, the settlement is made entirely in cash based on the difference between the exercise price of the option and the closing level of the index on which the futures contract is based on the expiration date. Purchasers of options who fail to exercise their options prior to the exercise date suffer a loss of the premium paid.

As an alternative to purchasing call and put options on index futures contracts, the Fund may purchase put and call options on the underlying indices themselves to the extent that such options are traded on national securities exchanges. Index options are similar to options on individual securities in that the purchaser of an index option acquires the right to buy, and the writer undertakes the obligation to sell, an index at a stated exercise price during the term of the option. Instead of giving the right to take or make actual delivery of securities, the holder of an index option has the right to receive a cash "exercise settlement amount." This amount is equal to the amount by which the fixed exercise price of the option exceeds (in the case of a put) or is less than (in the case of a call) the closing value

of the underlying index on the date of the exercise, multiplied by a fixed “index multiplier.” The Fund will enter into an option position only if there appears to be a liquid secondary market for such options.

The Fund will not engage in transactions in options on stock indices for speculative purposes but only to protect appreciation attained, to offset capital losses and to take advantage of the liquidity available in the option markets. The aggregate premium paid on all options on stock indices will not exceed 20% of the Fund’s total assets.

Inflation-Protected Securities

Inflation-protected securities are fixed-income securities whose principal value or interest rate is adjusted periodically according to changes in a specific price index (such as the Consumer Price Index for All Urban Consumers). If the price index falls (deflation), the principal value or interest rate of the securities will be adjusted downward, and, consequently, the interest payable on these securities will be reduced. U.S. Treasury Inflation-Protected Securities, also known as “TIPs,” are adjusted as to principal; repayment of the original principal upon maturity of the security is guaranteed if the security is purchased when originally issued. With respect to other types of inflation-protected securities that are adjusted to the principal amount, the adjusted principal value of the security repaid at maturity may be less than the original principal. Most other types of inflation-protected securities, however, are adjusted with respect to the interest rate, which has a minimum of 0%, and the principal value does not change.

Interests in Other Business Organizations

Entities such as limited partnerships, limited liability companies, business trusts and companies organized outside the United States may issue securities comparable to common or preferred stock. Limited partnerships are partnerships consisting of one or more general partners, by whom the business is conducted, and one or more limited partners who contribute capital to the partnership. Limited liability companies frequently consist of one or more managing members, by whom the business is conducted, and other members who contribute capital to the company. Limited partners and members of limited liability companies generally are not liable for the debts of the partnership beyond their capital contributions or commitments. Limited partners and non-managing members are not involved in the day-to-day management of the partnership or limited liability company. They receive income and capital gains from the partnership or company in accordance with the terms established in the partnership or operating agreement. Typical limited partnerships and limited liability companies are involved in real estate, oil and gas, and equipment leasing, but they also finance movies, research and development, and other projects.

For an organization classified as a partnership under the Code (including most limited partnerships and limited liabilities companies), each item of income, gain, loss, deduction and credit is not taxed at the partnership level but flows through with the same character to the partners or members. This allows the partnership to avoid double taxation.

A master limited partnership (“MLP”) is a publicly traded limited partnership or limited liability company. MLPs combine the tax advantages of a partnership with the liquidity of a publicly traded security. MLPs must limit their operations to avoid being taxed as corporations under the Code.

Investment Company Securities, including Money Market Mutual Funds

The Fund may invest in securities of other investment companies (“Acquired Funds”), including ETFs, as an efficient means of carrying out their investment policies and managing their uninvested cash. The Fund’s shareholders indirectly bear the expenses of the Acquired Funds in which the Fund invests.

Except under exemptive rules or relief from the Securities and Exchange Commission (“SEC”), the Fund may not invest more than 10% of its total assets at any one time in the shares of other investment companies (funds), 5% of its total assets in the shares of any one investment company, or own more than 3% of the shares of any one investment company. When the Fund invests in the shares of other investment companies, investment advisory and other fees will apply, and the investment’s yield will be reduced accordingly.

The Fund may invest their assets in common stocks and index-based securities. The Fund may also invest in ETFs, including index-based ETFs and Ultrashort ETFs that relate to real estate- or commodities-related business sectors. The shares of most index-based securities, including ETFs, are listed and traded on stock exchanges at market prices, although some shares may be redeemable at NAV for cash or securities. Index-based securities may be purchased in order to achieve exposure to a specific region, country or market sector, or for other reasons consistent with the Fund’s

investment strategy. As with traditional investment companies, index-based securities charge asset-based fees, although these fees tend to be relatively low. Index-based securities generally do not charge initial sales charges or redemption fees and investors pay only customary brokerage fees to buy and sell index-based securities.

Money Market Instruments

Except where otherwise noted, all of the Funds may, for temporary defensive or liquidity purposes, invest up to 100% of their assets in money market instruments.

Commercial Paper, Demand Notes, Variable Amount Demand Notes and Variable Amount Master Demand Notes

Consistent with its investment objective, policies, and restrictions, the Fund may invest in commercial paper (including commercial paper sold through private placements pursuant to Section 4(2) of the Securities Act of 1933) and variable amount master demand notes. Commercial paper consists of unsecured promissory notes issued by corporations normally having maturities of 270 days or less and rates of return which are fixed. These investments may include Canadian Commercial Paper, which is U.S. dollar denominated commercial paper issued by a Canadian corporation or a Canadian counterpart of a U.S. corporation, and europaper, which is U.S. dollar denominated commercial paper of a foreign issuer.

Demand notes and variable rate demand notes (“VRDNs”) are unsecured, direct lending arrangements between the Fund, as the lender, and a corporation, financial institution, government agency, municipality or other entity.

VRDNs have interest rates which float or which are adjusted at regular intervals ranging from daily to annually. Although the VRDNs are not generally traded, the Fund may demand payment of principal and accrued interest according to its arrangement with the borrower (usually upon no more than seven days’ notice). VRDNs are, therefore, treated as maturing on the later of the next interest adjustment or the date on which the Fund may next demand payment. Some VRDNs are backed by bank letters of credit.

The Fund may only invest in VRDNs which satisfy its credit requirements for commercial paper.

Variable amount master demand notes are unsecured demand notes that permit the indebtedness thereunder to vary and provide for periodic adjustments in the interest rate according to the terms of the instrument. Because master demand notes are direct lending arrangements between the Fund and the issuer, they are not normally traded. Although there is no secondary market in the notes, the Fund may demand payment of principal and accrued interest at any time. A variable amount master demand note will be deemed to have a maturity equal to the longer of the period of time remaining until the next readjustment of its interest rate or the period of time remaining until the principal amount can be recovered from the issuer through demand.

Other money market instruments may include: obligations (certificates of deposit, time deposits, bank master notes, and bankers’ acceptances) of thrift institutions, and savings and loans, provided that such institutions have total assets of \$1 billion or more as shown on their last published financial statements at the time of investment; short-term corporate obligations rated within the three highest rating categories by an NRSRO (for example, at least A by S&P or A by Moody’s) at the time of investment, or, if not rated, determined by the Advisor to be of comparable quality; general obligations issued by the U.S. Government and backed by its full faith and credit, and obligations issued or guaranteed as to principal and interest by agencies or instrumentalities of the U.S. Government (for example, obligations issued by Farmers Home Administration, Government National Mortgage Association, Federal Farm Credit Bank and Federal Housing Administration); receipts, including Treasury Receipts, Treasury Income Growth Receipts and Certificates of Accrual on Treasuries; repurchase agreements involving such obligations; money market funds, and foreign commercial paper.

Bank Obligations

Bank obligations are short-term obligations issued by U.S. and foreign banks, including bankers’ acceptances, certificates of deposit, time deposits and similar securities.

Bankers’ acceptances are negotiable drafts or bills of exchange typically drawn by an importer or exporter to pay for specific merchandise that are “accepted” by a bank, meaning, in effect, that the bank unconditionally agrees to pay the face value of the instrument on maturity. Investments in bankers’ acceptances will be limited to those guaranteed

by domestic and foreign banks having, at the time of investment, total assets of \$1 billion or more (as of the date of the institution's most recently published financial statements).

Certificates of Deposit and Time Deposits

Certificates of deposit and time deposits represent funds deposited in a commercial bank or a savings and loan association for a definite period of time and earning a specified return.

Investments in certificates of deposit and time deposits may include Eurodollar Certificates of Deposit, which are U.S. dollar denominated certificates of deposit issued by offices of foreign and domestic banks located outside the United States, Yankee Certificates of Deposit, which are certificates of deposit issued by a U.S. branch of a foreign bank denominated in U.S. dollars and held in the United States, Eurodollar Time Deposits, which are U.S. dollar denominated deposits in a foreign branch of a U.S. bank or a foreign bank, and Canadian Time Deposits, which are U.S. dollar denominated certificates of deposit issued by Canadian offices of major Canadian banks. All investments in certificates of deposit and time deposits will be limited to those (a) of domestic and foreign banks and savings and loan associations which, at the time of investment, have total assets of \$1 billion or more (as of the date of the institution's most recently published financial statements) or (b) the principal amount of which is insured by the Federal Deposit Insurance Corporation.

Mortgage Dollar Roll Transactions

A dollar roll transaction is a transaction through which the Fund sells certain of its securities to financial institutions such as banks and broker-dealers, and agrees to repurchase substantially similar securities at a mutually agreed upon date and price. At the time the Fund enters into a dollar roll agreement, it will place in a segregated custodial account assets such as U.S. Government securities or other liquid assets consistent with its investment restrictions having a value equal to the repurchase price (including accrued interest), and will subsequently continually monitor the account to insure that such equivalent value is maintained at all times. Dollar roll agreements involve the risk that the market value of securities sold by the Fund may decline below the price at which it is obligated to repurchase the securities. Dollar roll agreements are considered to be borrowings by an investment company under the 1940 Act and, therefore, a form of leverage. The Fund may experience a negative impact on its net asset value NAV if interest rates rise during the term of a dollar roll agreement. The Fund generally will invest the proceeds of such borrowings only when such borrowings will enhance the Fund's liquidity or when the Fund reasonably expects that the interest income to be earned from the investment of the proceeds is greater than the interest expense of the transaction.

Mortgage-related Securities

Mortgage-related securities are securities that, directly or indirectly, represent participations in, or are secured by and payable from, loans secured by real property. Mortgage-related securities include mortgage pass-through securities, adjustable rate mortgage securities and derivative securities such as collateralized mortgage obligations and stripped mortgage-backed securities. Mortgage-related securities fall into three categories: (a) those issued or guaranteed by the U.S. Government or one of its agencies or instrumentalities, such as Government National Mortgage Association ("GNMA"), Federal National Mortgage Association ("FNMA") and Federal Home Loan Mortgage Corporation ("FHLMC"); (b) those issued by non-governmental issuers that represent interests in, or are collateralized by, mortgage-related securities issued or guaranteed by the U.S. Government or one of its agencies or instrumentalities; and (c) those issued by non-governmental issuers that represent an interest in, or are collateralized by, whole mortgage loans or mortgage-related securities without a government guarantee but usually with over-collateralization or some other form of private credit enhancement. Non-governmental issuers include originators of investors in mortgage loans, including savings and loan associations, mortgage bankers, commercial banks, investment banks and special purpose subsidiaries of the foregoing.

There are a number of important differences both among the agencies and instrumentalities of the U.S. Government that issue mortgage-related securities and among the securities themselves. "Ginnie Maes" are Mortgage Pass-Through Certificates issued by GNMA, which is a wholly-owned U.S. Government corporation within the Department of Housing and Urban Development. Ginnie Maes are guaranteed as to the timely payment of principal and interest by GNMA and GNMA's guarantee is backed by the full faith and credit of the U.S. Treasury. In addition, Ginnie Maes are supported by the authority of GNMA to borrow funds from the U.S. Treasury to make payments under GNMA's guarantee. Mortgage-related securities issued by the FNMA include FNMA Guaranteed Mortgage Pass-Through Certificates (also known as "Fannie Maes") which are solely the obligations of the FNMA. FNMA is a

government-sponsored organization. Fannie Maes are guaranteed as to timely payment of principal and interest by FNMA but are not backed by or entitled to the full faith and credit of the U.S. Treasury. Mortgage-related securities issued by the FHLMC include FHLMC Mortgage Participation Certificates (also known as “Freddie Macs” or “PCs”). The FHLMC is a corporate instrumentality of the U.S. Government, created pursuant to an Act of Congress. Freddie Macs are not guaranteed by the U.S. Treasury or by any Federal Home Loan Bank and do not constitute a debt or obligation of the U.S. Government or of any Federal Home Loan Bank. Freddie Macs entitle the holder to timely payment of interest, which is guaranteed by the FHLMC. The FHLMC guarantees either ultimate collection or timely payment of all principal payments on the underlying mortgage loans. When the FHLMC does not guarantee timely payment of principal, FHLMC may remit the amount due on account of its guarantee of ultimate payment of principal at any time after default on an underlying mortgage, but in no event later than one year after it becomes payable.

In September 2008, the U.S. Treasury announced that FNMA and FHLMC were placed in conservatorship by the Federal Housing Finance Agency (“FHFA”), a newly created independent regulator. The conservatorship has no specified termination date. FNMA also has entered into a senior preferred stock purchase agreement with the U.S. Department of the Treasury pursuant to which Treasury has committed to provide funding to FNMA under specified circumstances. There can be no assurance as to when or how the conservatorship will be terminated or whether FNMA or FHLMC will continue to exist following the conservatorship or what their respective business structures will be during or following the conservatorship. The FHFA, as conservator, has the power to repudiate any contract entered into by FNMA or FHLMC prior to its appointment if it determines that performance of the contract is burdensome and repudiation of the contract promotes the orderly administration of FNMA’s or FHLMC’s affairs. Further, the FHFA has the right to transfer or sell any asset or liability of FNMA or FHLMC without any approval, assignment or consent. If FHFA were to transfer any such guaranty obligation to another party, holders of FNMA or FHLMC mortgage-backed securities would have to rely on that party for satisfaction of the guaranty obligation and would be exposed to the credit risk of that party.

Although certain mortgage-related securities are guaranteed by a third party or otherwise similarly secured, the market value of the security, which may fluctuate, is not so secured. If the Fund purchases a mortgage-related security at a premium, that portion may be lost if there is a decline in the market value of the security whether resulting from changes in interest rates or prepayments in the underlying mortgage collateral. As with other interest-bearing securities, the prices of mortgage-related securities are inversely affected by changes in interest rates. However, though the value of a mortgage-related security may decline when interest rates rise, the converse is not necessarily true, since in periods of declining interest rates the mortgages underlying the security are prone to prepayment. For this and other reasons, a mortgage-related security’s effective maturity may be shortened by unscheduled prepayments on the underlying mortgages and, therefore, it is not possible to predict accurately the security’s return to the Fund. In addition, regular payments received in respect of mortgage-related securities include both interest and principal. No assurance can be given as to the return the Fund will receive when these amounts are reinvested.

Mortgage Pass-through Securities

Mortgage pass-through securities provide for the pass-through to investors of their pro-rata share of monthly payments (including any prepayments) made by the individual borrowers on the pooled mortgage loans, net of any fees paid to the guarantor of such securities and the servicer of the underlying mortgage loans.

Adjustable Rate Mortgage Securities

Adjustable rate mortgage securities (“ARMS”) are pass-through mortgage securities collateralized by mortgages with interest rates that are adjusted from time to time. The adjustments usually are determined in accordance with a predetermined interest rate index and may be subject to certain limits. While the values of ARMS, like other debt securities, generally vary inversely with changes in market interest rates (increasing in value during periods of declining interest rates and decreasing in value during periods of increasing interest rates), the values of ARMS should generally be more resistant to price swings than other debt securities because the interest rates of ARMS move with market interest rates. The adjustable rate feature of ARMS will not, however, eliminate fluctuations in the prices of ARMS, particularly during periods of extreme fluctuations in interest rates.

ARMS typically have caps which limit the maximum amount by which the interest rate may be increased or decreased at periodic intervals or over the life of the loan. To the extent that interest rates increase in excess of the caps, ARMS can be expected to behave more like traditional debt securities and to decline in value to a greater extent than would be the case in the absence of such caps. Also, since many adjustable rate mortgages only reset on an annual basis, it

can be expected that the prices of ARMS will fluctuate to the extent that changes in prevailing interest rates are not immediately reflected in the interest rates payable on the underlying adjustable rate mortgages. The extent to which the prices of ARMS fluctuate with changes in interest rates will also be affected by the indices underlying the ARMS. Some indices, such as the one-year constant maturity Treasury note rate, closely mirror changes in market interest rate levels. Others, such as the 11th District Federal Reserve Cost of Funds Index (often related to ARMS issued by FNMA), tend to lag changes in market levels and tend to be somewhat less volatile.

Derivative Mortgage Securities

Collateralized mortgage obligations are derivative mortgage securities and are debt instruments issued by special purpose entities which are secured by pools of mortgage loans or other mortgage-related securities. Multi-class pass-through securities are equity interests in a trust composed of mortgage loans or other mortgage-related securities. Both are considered derivative mortgage securities and are collectively referred to as “CMOs.” Payments of principal and interest on underlying collateral provide the funds to pay debt service on the collateralized mortgage obligation or make scheduled distributions on the multi-class pass-through security.

In a CMO, a series of bonds or certificates is issued in multiple classes. Each class of CMO, often referred to as a “tranche,” is issued at a specific coupon rate and has a stated maturity or final distribution date. Principal prepayments on collateral underlying a CMO may cause it to be retired substantially earlier than the stated maturities or final distribution dates.

The principal and interest on the underlying mortgages may be allocated among the several tranches of a CMO in many ways. For example, certain tranches may have variable or floating interest rates and others may provide only the principal or interest feature of the underlying security. Generally, the purpose of the allocation of the cash flow of a CMO to the various tranches is to obtain a more predictable cash flow to certain of the individual tranches than exists with the underlying collateral of the CMO. As a general rule, the more predictable the cash flow is on a CMO tranche, the lower the anticipated yield will be on that tranche at the time of issuance relative to prevailing market yields on mortgage-related securities. As part of the process of creating more predictable cash flows on most of the tranches of a CMO, one or more tranches generally must be created that absorb most of the volatility in the cash flows on the underlying mortgage loans. The yields on these tranches, which may include inverse floaters, stripped mortgage-backed securities, and Z tranches, discussed below, are generally higher than prevailing market yields on mortgage-related securities with similar maturities. As a result of the uncertainty of the cash flows of these tranches, the market prices of and yield on these tranches generally are more volatile.

An inverse floater is a CMO tranche with a coupon rate that moves inversely to a designated index, such as LIBOR (London Inter-Bank Offered Rate) or COFI (Cost of Funds Index). Like most other fixed income securities, the value of inverse floaters will decrease as interest rates increase. Inverse floaters, however, exhibit greater price volatility than the majority of mortgage pass-through securities or CMOs. Coupon rates on inverse floaters typically change at a multiple of the change in the relevant index rate. Thus, any rise in the index rate (as a consequence of an increase in interest rates) causes a correspondingly greater drop in the coupon rate of an inverse floater while any drop in the index rate causes a correspondingly greater increase in the coupon of an inverse floater. Some inverse floaters also exhibit extreme sensitivity to changes in prepayments. Inverse floaters would be purchased by the Fund in an attempt to protect against a reduction in the income earned on the Fund’s investments due to a decline in interest rates.

Z tranches of CMOs defer interest and principal payments until one or more other classes of the CMO have been paid in full. Interest accretes on the Z tranche, being added to principal, and is compounded through the accretion period. After the other classes have been paid in full, interest payments begin and continue through maturity. Z tranches have characteristics similar to zero coupon bonds. Like a zero coupon bond, during its accretion period a Z tranche has the advantage of eliminating the risk of reinvesting interest payments at lower rates during a period of declining market interest rates. At the same time, however, and also like a zero coupon bond, the market value of a Z tranche can be expected to fluctuate more widely with changes in market interest rates than would the market value of a tranche which pays interest currently. In addition, changes in prepayment rates on the underlying mortgage loans will affect the accretion period of a Z tranche, and therefore also will influence its market value.

Stripped mortgage-backed securities (“SMBSs”) may represent an interest solely in the principal repayments or solely in the interest payments on mortgage-backed securities. SMBSs are derivative multi-class securities. SMBSs are usually structured with two classes and receive different proportions of the interest and principal distributions on the pool of underlying mortgage-backed securities. Due to the possibility of prepayments on the underlying mortgages,

SMBSs may be more interest-rate sensitive than other securities purchased. If prevailing interest rates fall below the level at which SMBSs were issued, there may be substantial prepayments on the underlying mortgages, leading to the relatively early prepayments of principal-only SMBSs (the principal-only or “PO” class) and a reduction in the amount of payments made to holders of interest-only SMBSs (the interest-only or “IO” class). Therefore, the IO class generally increases in value as interest rates rise and decreases in value as interest rates fall, counter to the PO class and to changes in value experienced by most fixed income securities. If the underlying mortgages experience slower than anticipated prepayments of principal, the yield on a PO class will be affected more severely than would be the case with a traditional mortgage-related security. Because the yield to maturity of an IO class is extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage-backed securities, it is possible that the Fund might not recover its original investment on interest-only SMBSs if there are substantial prepayments on the underlying mortgages. The Fund’s inability to fully recoup its investment in these securities as a result of a rapid rate of principal prepayments may occur even if the securities are rated AAA by an NRSRO. In view of these considerations, the Advisor intends to use these characteristics of interest-only SMBSs to reduce the effects of interest rate changes on the value of the Fund’s portfolio, while continuing to pursue current income.

Municipal Securities

Municipal securities generally include debt obligations (bonds, notes or commercial paper) issued by or on behalf of any of the 50 states and their political subdivisions, agencies and public authorities. The interest paid on municipal securities generally is tax-exempt. Municipal securities are issued to obtain funds for various public purposes, including the construction of public facilities, such as airports, bridges, highways, housing, hospitals, mass transportation, schools, streets, water and sewer works, gas, and electric utilities. They may also be issued to refund outstanding obligations or to obtain funds for general operating expenses. Municipal leases are issued by a state or local government to acquire equipment or facilities, the obligations of which are typically secured by the leased equipment or facilities.

Non-Investment Grade Securities

The fixed income securities rated below investment grade generally entail greater interest rate, liquidity and credit risks than investment grade securities.

Obligations of Supranational Entities

For a discussion of Obligations of Supranational Entities, please see the “Foreign Securities” discussion in this section.

Options

A call option gives the purchaser of the option the right to buy a security at a stated price from the writer (seller) of the option. A put option gives the purchaser of the option the right to sell a security at a stated price to the writer of the option. In a covered call option, during the option period the writer owns the security (or a comparable security sufficient to satisfy securities exchange requirements) which may be sold pursuant to the option. In a covered put option, the writer holds cash and/or short-term debt instruments sufficient in an amount equal to the exercise price of the option. In addition, a put or call option will be considered covered if and to the extent that some or all of the risk of the option has been offset by another option. The Fund may write combinations of covered puts and calls on the same underlying security.

In general, the Fund may write options in an attempt to increase returns or purchase options for hedging purposes.

The premium received from writing a put or call option, increases the Fund’s return on the underlying security in the event that the option expires unexercised or is closed out at a profit. The amount of the premium reflects, among other things, the relationship between the exercise price and the current market value of the underlying security, the volatility of the underlying security, the amount of time remaining until expiration, current interest rates, and the effect of supply and demand in the options market and in the market for the underlying security. A put option locks in the price at which the Fund may sell a security it holds, thus hedging against market declines and a call option locks in the price at which the Fund may purchase a security, thus hedging against inflation. Such protection is provided during the life of the put option since the Fund, as holder of the option, is able to sell the underlying security at the option’s exercise price regardless of any decline in the underlying security’s market price. By writing a call option, the Fund limits its opportunity to profit from any increase in the market value of the underlying security above the exercise price of the

option but continues to bear the risk of a decline in the value of the underlying security. By writing a put option, the Fund assumes the risk that it may be required to purchase the underlying security for an exercise price higher than its then current market value, resulting in a potential capital loss unless the security substantially appreciates in value.

The Fund may terminate an option that it has written prior to its expiration by entering into a closing purchase transaction, in which it purchases an offsetting option. The Fund realizes a profit or loss from a closing transaction if the cost of the transaction (option premium plus transaction costs) is less or more than the premium received from writing the option. Because increases in the market price of a call option generally reflect increases in the market price of the security underlying the option, any loss resulting from a closing purchase transaction may be offset in whole or in part by unrealized appreciation of the underlying security owned by the Fund.

In order for a put option to be profitable, the market price of the underlying security must decline sufficiently below the exercise price to cover the premium and transaction costs. By using put options in this manner the Fund will reduce any profit it might otherwise have realized from appreciation of the underlying security by the premium paid for the put option and by transaction costs.

In order for a call option to be profitable, the market price of the underlying security must rise sufficiently above the exercise price to cover the premium and transaction costs.

Those Funds that are authorized to write or purchase put and call options must cover such options.

The successful use of options depends on the ability of the Advisor or Sub-Advisor to forecast interest rate and market movements. For example, if the Fund were to write a call option based on the Advisor's or Sub-Advisor's expectation that the price of the underlying security will fall, but the price rises instead, the Fund could be required to sell the security upon exercise at a price below the current market price. Similarly, if the Fund were to write a put option based on the Advisor's or Sub-Advisor's expectations that the price of the underlying security will rise, but the price falls instead, the Fund could be required to purchase the security upon exercise at a price higher than the current market price.

When the Fund purchases an option, it runs the risk that it will lose its entire investment in the option in a relatively short period of time, unless the Fund exercises the option or enters into a closing sale transaction with respect to the option during the life of the option. If the price of the underlying security does not rise (in the case of a call) or fall (in the case of a put) to an extent sufficient to cover the option premium and transaction costs, the Fund will lose part or all of its investment in the option. This contrasts with an investment by the Fund in the underlying security, since the Fund will not lose any of its investment in such security if the price does not change.

The use of options also involves the risk of imperfect correlation between movements in option prices and movements in the value of the underlying securities.

The effective use of options also depends on the Fund's ability to terminate option positions at times when the Advisor deems it desirable to do so. Although the Fund will take an option position only if the Advisor believes there is a liquid secondary market for the option, there is no assurance that the Fund will be able to effect a closing transaction at any particular time or at an acceptable price.

The Fund generally expects that its options transactions will be conducted on recognized exchanges. In certain instances, however, the Fund may purchase and sell options in the OTC markets. The Fund's ability to terminate options in the OTC market may be more limited than for exchange-traded options and may also involve the risk that securities dealers participating in such transactions would be unable to meet their obligations to the Fund. The Fund will, however, engage in OTC market transactions only when appropriate exchange-traded transactions are unavailable and when, in the opinion of the Advisor or Sub-Advisor, the pricing mechanism and liquidity of the OTC market is satisfactory and the participants are responsible parties likely to meet their contractual obligations.

If a secondary trading market in options were to become unavailable, the Fund could no longer engage in closing transactions. Lack of investor interest might adversely affect the liquidity of the market for particular options or series of options. A market may discontinue trading of a particular option or options generally. In addition, a market could become temporarily unavailable if unusual events—such as volume in excess of trading or clearing capability—were to interrupt its normal operations.

A market may at times find it necessary to impose restrictions on particular types of options transactions, such as opening transactions. For example, if an underlying security ceases to meet qualifications imposed by the market or the Options Clearing Corporation, new series of options on that security will no longer be opened to replace expiring series, and opening transactions in existing series may be prohibited. If an options market were to become unavailable, the Fund as a holder of an option would be able to realize profits or limit losses only by exercising the option, and the Fund, as option writer, would remain obligated under the option until expiration.

Disruptions in the markets for the securities underlying options purchased or sold by the Fund could result in losses on the options. If trading is interrupted in an underlying security, the trading of options on that security is normally halted as well. As a result, the Fund as purchaser or writer of an option will be unable to close out its positions until options trading resumes, and it may be faced with considerable losses if trading in the security reopens at a substantially different price. In addition, the Options Clearing Corporation or other options markets may impose exercise restrictions. If a prohibition on exercise is imposed at the time when trading in the option has also been halted, the Fund as a purchaser or writer of an option will be locked into its position until one of the two restrictions has been lifted. If the Options Clearing Corporation were to determine that the available supply of an underlying security appears insufficient to permit delivery by the writers of all outstanding calls in the event of exercise, it may prohibit indefinitely the exercise of put options by holders who would be unable to deliver the underlying interest. The Fund, as holder of such a put option, could lose its entire investment if the prohibition remained in effect until the put option's expiration and the Fund was unable either to acquire the underlying security or to sell the put option in the market.

Special risks are presented by internationally-traded options. Because of time differences between the United States and various foreign countries, and because different holidays are observed in different countries, foreign options markets may be open for trading during hours or on days when U.S. markets are closed. As a result, option premium may not reflect the current prices of the underlying interest in the United States.

An exchange-listed option may be closed out only on an exchange which provides a secondary market for an option of the same series. There is no assurance that a liquid secondary market on an exchange will exist for any particular option or at any particular time. If no secondary market were to exist, it would be impossible to enter into a closing transaction to close out an option position. As a result, the Fund may be forced to continue to hold, or to purchase at a fixed price, a security on which it has sold an option at a time when the Advisor or Sub-Advisor believes it is inadvisable to do so.

Higher than anticipated trading activity or order flow or other unforeseen events might cause the Options Clearing Corporation or an exchange to institute special trading procedures or restrictions that might restrict the Fund's use of options. The exchanges have established limitations on the maximum number of calls and puts of each class that may be held or written by an investor or group of investors acting in concert. It is possible that the Trust and other clients of the Advisor may be considered such a group. These position limits may restrict the Trust's ability to purchase or sell options on particular securities. Options which are not traded on national securities exchanges may be closed out only with the other party to the option transaction. For that reason, it may be more difficult to close out unlisted options than listed options. Furthermore, unlisted options are not subject to the protection afforded purchasers of listed options by the Options Clearing Corporation.

Preferred Stock

Preferred stock is a type of equity security which represents an ownership interest in a corporation and the right to a portion of the assets of the corporation in the event of a liquidation. This right, however, is subordinate to that of any creditors, including holders of debt issued by the corporation. Owners of preferred stock ordinarily do not have voting rights, but are entitled to dividends at a specified rate.

Real Estate Investment Trusts ("REITs")

REITs are pooled investment vehicles which invest primarily in income producing real estate or real estate related loans or interest. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling property that has appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. The real property and mortgages serving as investment vehicles for REITs may be either residential or commercial in nature and may include healthcare facilities. Similar to investment companies,

REITs are not taxed on income distributed to shareholders provided they comply with several requirements of the Code. Such tax requirements limit a REIT's ability to respond to changes in the commercial real estate market.

Investments in REITs are subject to the same risks as direct investments in real estate. Real estate values rise and fall in response to many factors, including local, regional and national economic conditions, the demand for rental property, and interest rates. In addition, REITs may have limited financial resources, may trade less frequently and in limited volume and may be more volatile than other securities.

Repurchase Agreements

Repurchase agreements are agreements through which banks, broker-dealers and other financial institutions approved by the Trustees, sell securities (usually U.S. Government securities) to the Fund and agree to repurchase those securities at a specified price and time (usually not more than seven days from the original sale). The seller's obligation to pay the repurchase price is secured by the securities to be repurchased. These securities are required to be held by the Fund, its custodian or a third-party custodian. In order to protect the Fund's interest, collateral securities must have a value of at least 100% of the resale price at all times. (The seller must provide additional collateral in the event that this condition is not met). In general, the Advisor or Sub-Advisor will require collateral securities to have a value of at least 102% of the resale price at the time the repurchase agreement is made. The collateral is marked to market on a daily basis, thus enabling the Advisor or Sub-Advisor to determine when to request additional collateral from the seller.

If a seller defaults on its repurchase obligation, the Fund could realize a loss on the sale of the underlying securities to the extent that the proceeds of the sale (including accrued interest) are less than the resale price. In addition, even though the U.S. Bankruptcy Code provides protection to the Fund if the seller becomes bankrupt or insolvent, the Fund may suffer losses in such event.

Restricted and Illiquid Securities

Restricted securities are any securities which are subject to restriction on resale under federal securities law, including commercial paper issued in reliance on the exemption from registration afforded by Section 4(2) of the Securities Act of 1933. Illiquid securities are any securities for which there is a limited trading market and may, therefore, be difficult to sell at market value. Because restricted and illiquid securities may be difficult to sell at an acceptable price, they may be subject to greater volatility and may result in a loss to the Fund.

Section 4(a)(2) commercial paper is generally sold to institutional investors, such as mutual funds, who agree that they are purchasing the paper for investment purposes and not with a view to public distribution. Any resale by the purchaser must be in an exempt transaction. Section 4(a)(2) commercial paper is normally resold to other institutional investors through or with the assistance of the issuer or investment dealers who make a market in Section 4(a)(2) commercial paper, thus providing liquidity. The Advisor believes that Section 4(a)(2) commercial paper and possibly certain other restricted securities which meet the criteria for liquidity established by the Trustees are quite liquid. Therefore, the Trust intends to treat these securities as liquid and not subject to the investment limitation applicable to illiquid securities.

Reverse Repurchase Agreements

The Fund may borrow funds for temporary purposes by entering into reverse repurchase agreements, provided such action is consistent with the Fund's investment objective and fundamental investment restrictions. As a matter of non-fundamental policy, the Fund intends to limit total borrowings under reverse repurchase agreements to no more than 10% of the value of its total assets. Pursuant to a reverse repurchase agreement, the Fund will sell portfolio securities to financial institutions such as banks or to broker-dealers, and agree to repurchase the securities at a mutually agreed-upon date and price. The Fund intends to enter into reverse repurchase agreements only to avoid otherwise selling securities during unfavorable market conditions to meet redemptions. At the time the Fund enters into a reverse repurchase agreement, it will place in a segregated custodial account assets such as U.S. Government securities or other liquid assets consistent with the Fund's investment objective having a value equal to 100% of the repurchase price (including accrued interest), and will subsequently monitor the account to ensure that an equivalent value is maintained. Reverse repurchase agreements involve the risk that the market value of the securities sold by the Fund may decline below the price at which the Fund is obligated to repurchase the securities. Reverse repurchase agreements are considered to be borrowings by the Fund under the 1940 Act.

Securities Lending

In order to generate additional income, the Fund may lend its portfolio securities on a short-term basis to certain brokers, dealers or other financial institutions. In determining whether to lend to a particular broker, dealer or financial institution, the Advisor will consider all relevant facts and circumstances, including the size, creditworthiness and reputation of the borrower. Any loans made will be continuously secured by collateral in cash at least equal to 100% of the value of the securities on loan for the Fund. The Fund may lend up to 33 ⅓% of their total assets. Such loans must be fully collateralized by cash, U.S. government obligations or other high-quality debt obligations and marked to market daily. Although the loan is fully collateralized, if the borrower defaults, the Fund could lose money.

While portfolio securities are on loan, the borrower will pay to the lending Fund any dividends or interest received on the securities. In addition, the Fund retains all or a portion of the interest received on investment of the collateral or receives a fee from the borrower. Although voting rights, or rights to consent, with respect to the loaned securities pass to the borrower, the lending Fund retains the right to call the loans at any time on reasonable notice, and it will do so to enable the Fund to exercise voting rights on any matters materially affecting the investment. The Fund may also call such loans in order to sell the securities.

One of the risks in lending portfolio securities, as with other extensions of credit, is the possible delay in recovery of the securities or possible loss of rights in the collateral should the borrower fail financially. There is also the risk that, when lending portfolio securities, the securities may not be available to the Fund on a timely basis and the Fund may, therefore, lose the opportunity to sell the securities at a desirable price. In addition, in the event that a borrower of securities would file for bankruptcy or become insolvent, disposition of the securities may be delayed pending court action.

Small Cap/Special Equity Situation Securities

Certain Funds may invest in the securities of small capitalization companies and companies in special equity situations. Companies are considered to have a small market capitalization if their capitalization is within the range of those companies in the S&P 600 SmallCap Index. Companies are considered to be experiencing special equity situations if they are experiencing unusual and possibly non-repetitive developments, such as mergers; acquisitions; spin-offs; liquidations; reorganizations; and new products, technology or management. These companies may offer greater opportunities for capital appreciation than larger, more established companies, but investment in such companies may involve certain special risks. These risks may be due to the greater business risks of small size, limited markets and financial resources, narrow product lines and frequent lack of depth in management. The securities of such companies are often traded in the over-the-counter market and may not be traded in volumes typical on a national securities exchange. Thus, the securities of such companies may be less liquid, and subject to more abrupt or erratic market movements than securities of larger, more established growth companies. Since a “special equity situation” may involve a significant change from a company’s past experiences, the uncertainties in the appraisal of the future value of the company’s equity securities and the risk of a possible decline in the value of the Fund’s investments are significant.

Tax-Exempt Commercial Paper and Tax-Exempt Securities

Tax-exempt commercial paper typically represents very short-term, unsecured, negotiable promissory notes. These obligations are often issued to meet seasonal working capital needs of municipalities or to provide interim construction financing. The obligations are paid from general revenues of municipalities or are refinanced with long-term debt. In most cases, tax-exempt commercial paper is backed by letters of credit, lending agreements, note repurchase agreements or other credit facility agreements offered by banks or other institutions which may be called upon in the event of default by the issuer of the commercial paper.

Tax-exempt securities are debt obligations the interest on which is, in the opinion of bond counsel for the issuing governmental entity or agency, excluded from gross income for federal income tax purposes. Examples of tax-exempt securities include fixed and floating or variable rate municipal obligations, tax-exempt notes, certificates of participation, trust and partnership interests in municipal obligations, tax-exempt commercial paper, stand-by commitments and private activity bonds.

Tax-exempt securities are issued to obtain monies for various public purposes, including the construction of a wide range of public facilities such as bridges, highways, roads, schools, water and sewer works, and other utilities. Other public purposes for which tax-exempt securities may be issued include refunding outstanding obligations, obtaining

monies for general operating expenses and to lend to other public institutions and facilities. The two principal classifications of tax-exempt securities are general obligation and limited obligation (or revenue) securities. General obligation securities are obligations involving the credit of an issuer possessing taxing power and are payable from the issuer's general unrestricted revenues and not from any particular fund or source. The characteristics and methods of enforcement of general obligation securities vary according to the law applicable to the particular issuer.

Limited obligation securities are payable only from the revenues derived from a particular facility or class or facilities or, in some cases, from the proceeds of a special excise or other specific revenue source, and generally are not payable from the unrestricted revenues of the issuer. Private activity bonds generally are limited obligation securities, the credit and quality of which are usually directly related to the credit of the private user of the facilities. Payment of principal of and interest on these bonds is the responsibility of the private user (and any guarantor).

Tax-exempt notes and tax-exempt commercial paper are generally used to provide for short-term capital needs, seasonal working capital needs of municipalities or to provide interim construction financing, and generally have maturities of one year or less. Tax-exempt notes include tax anticipation notes ("TANs"), revenue anticipation notes ("RANs") and bond anticipation notes ("BANs"). TANs are issued to finance working capital needs of municipalities. Generally, they are issued in anticipation of various seasonal tax revenues, such as income, sales, use and business taxes, and are payable from these specific future taxes. RANs are issued in expectation of receipt of other kinds of revenue, such as federal revenues or grants available under the federal revenue sharing programs. BANs are issued to provide interim financing until long-term financing can be arranged. In most cases, the long-term bonds then provide the money for the repayment of the notes. Tax-exempt commercial paper is typically backed by letters of credit, lending agreements, note repurchase agreements or other credit facility agreements offered by banks or other institutions and is actively traded.

Private activity bonds (sometimes called "industrial development bonds") may be issued by or on behalf of public authorities to obtain funds to support certain privately owned or operated facilities. Because dividends attributable to interest on such bonds may not be tax exempt, it may not be desirable for an investor to purchase shares of the Fund which invests in private activity bonds, if such investor is a "substantial user" of facilities which are financed by private activity bonds or industrial development bonds or a "related person" of such a substantial user.

Tax-exempt securities may be purchased through the acquisition of certificates of accrual or similar instruments evidencing direct ownership of interest payments or principal payments, or both, on tax-exempt securities. In such arrangements, any discount accruing on a certificate or instrument that is purchased at a yield not greater than the coupon rate of interest on the related tax-exempt securities must be exempt from federal income tax and applicable state income taxes to the same extent as interest on such tax-exempt securities, in the opinion of counsel to the initial seller of each such certificate or instrument.

Tax-exempt securities may also be acquired by purchasing from banks participation interests in all or part of specific holdings of tax-exempt securities. Such participations may be backed in whole or in part by an irrevocable letter of credit or guarantee of the selling bank. The Fund will have the right to sell the interest back to the bank or other financial institutions and draw on the letter of credit on demand, generally on seven days' notice, for all or any part of the Fund's participation interest in the par value of the municipal obligation plus accrued interest. The Advisor will generally exercise the demand on a letter of credit only under the following circumstances: (1) upon default of any of the terms of the documents of the municipal obligation, (2) as needed to provide liquidity in order to meet redemptions, or (3) in order to maintain a high quality investment portfolio. The selling bank may receive a fee in connection with the arrangement. Banks and financial institutions are subject to extensive governmental regulations which may limit the amounts and types of loans and other financial commitments that may be made and interest rates and fees which may be charged. The profitability of banks and financial institutions is largely dependent upon the availability and cost of capital funds to finance lending operations under prevailing money market conditions. General economic conditions also play an important part in the operations of these entities and exposure to credit losses arising from possible financial difficulties of borrowers may affect the ability of a bank or financial institution to meet its obligations with respect to a participation interest. The Fund which purchases a participation interest must receive an opinion of counsel or a ruling of the Internal Revenue Service stating that interest earned by it on the tax-exempt securities in which it holds such participation interest is excluded from gross income for federal regular income tax purposes and applicable state income taxes.

Prices and yields on tax-exempt securities are dependent on a variety of factors, including general money market conditions, the financial condition of the issuer, general conditions in the market for tax-exempt obligations, the size of a particular offering, and the maturity of the obligation and ratings of particular issues, and are subject to change from time to time. Information about the financial condition of an issuer of tax-exempt bonds or notes may not be as extensive as that which is made available by corporations whose securities are publicly traded.

Congress or state legislatures may seek to extend the time for payment of principal or interest, or both, or to impose other constraints upon enforcement of tax-exempt securities. There is also the possibility that, as a result of litigation or other conditions, the power or ability of issuers to meet their obligations to pay interest on and principal of their tax-exempt securities may be materially impaired or their obligations may be found to be invalid or unenforceable. Such litigation or conditions may from time to time have the effect of introducing uncertainties in the market for tax exempt obligations or certain segments thereof, or may materially affect the credit risk with respect to particular bonds or notes. Adverse economic, business, legal or political developments might affect all or a substantial portion of tax-exempt securities in the same manner. Obligations of issuers of tax-exempt securities are subject to the provisions of bankruptcy, insolvency and other laws, such as the Federal Bankruptcy Code, affecting the rights and remedies of creditors.

The Code imposes certain continuing requirements on issuers of tax-exempt securities regarding the use, expenditure and investment of bond proceeds and the payment of rebates to the United States of America. Failure by the issuer to comply subsequent to the issuance of tax-exempt bonds with certain of these requirements could cause interest on the bonds to become includable in gross income retroactive to the date of issuance.

Time Deposits

For a discussion of Time Deposits, please see the “Money Market Instruments” discussion in this section.

Treasury Receipts

For a discussion of Treasury Receipts, please see the “Money Market Instruments” discussion in this section.

Unit Investment Trusts

Unit Investment Trusts are a type of investment company, registered with the SEC under the 1940 Act, that purchases a fixed portfolio of income-producing securities, such as corporate, municipal, or government bonds, mortgage-backed securities, or preferred stock. Unit holders receive an undivided interest in both the principal and the income portion of the portfolio in proportion to the amount of capital they invest. The portfolio of securities remains fixed until all the securities mature and unit holders have recovered their principal. Certain exchange traded funds are organized as unit investment trusts.

U.S. Government Securities

U.S. Government securities are securities that are either issued or guaranteed as to payment of principal and interest by the U.S. Government, its agencies or instrumentalities. U.S. Government securities are limited to: direct obligations of the U.S. Treasury; such as bills, notes, and bonds of the U.S. Treasury, and notes, bonds, and discount notes of U.S. Government agencies or instrumentalities, including certain mortgage securities.

Some obligations issued or guaranteed by agencies or instrumentalities of the U.S. Government, such as Government National Mortgage Association participation certificates, are backed by the full faith and credit of the U.S. Treasury.

Other such obligations are only supported by: the issuer’s right to borrow an amount limited to a specific line of credit from the U.S. Treasury; the discretionary authority of the U.S. Government to purchase certain obligations of an agency or instrumentality; or the credit of the agency or instrumentality.

Agency securities are issued or guaranteed by a federal agency or other government sponsored entity (“GSE”) acting under federal authority. Some GSE securities are supported by the full faith and credit of the U.S. Government and some GSE securities are not. GSE securities backed by the full faith and credit of the U.S. Government include the Government National Mortgage Association, Small Business Administration, Farm Credit System Financial Assistance Corporation, Farmer’s Home Administration, Federal Financing Bank, General Services Administration,

Department of Housing and Urban Development, Export-Import Bank, Overseas Private Investment Corporation, and Washington Metropolitan Area Transit Authority Bonds.

GSE securities, not backed by the full faith and credit of the U.S. Government but that receive support through federal subsidies, loans or other benefits include those issued by the Federal Home Loan Bank System, Federal Home Loan Mortgage Corporation (“FHLMC”), Federal National Mortgage Association (“FNMA”) and Tennessee Valley Authority in support of such obligations.

In September 2008, the U.S. Treasury announced that FNMA and FHLMC were placed in conservatorship by the Federal Housing Finance Agency (“FHFA”), a newly created independent regulator. The conservatorship has no specified termination date. FNMA also has entered into a senior preferred stock purchase agreement with the U.S. Department of the Treasury pursuant to which Treasury has committed to provide funding to FNMA under specified circumstances. There can be no assurance as to when or how the conservatorship will be terminated or whether FNMA or FHLMC will continue to exist following the conservatorship or what their respective business structures will be during or following the conservatorship. The FHFA, as conservator, has the power to repudiate any contract entered into by FNMA or FHLMC prior to its appointment if it determines that performance of the contract is burdensome and repudiation of the contract promotes the orderly administration of FNMA’s or FHLMC’s affairs. Further, the FHFA has the right to transfer or sell any asset or liability of FNMA or FHLMC without any approval, assignment or consent. If FHFA were to transfer any such guaranty obligation to another party, holders of FNMA or FHLMC mortgage-backed securities would have to rely on that party for satisfaction of the guaranty obligation and would be exposed to the credit risk of that party. FNMA also has entered into a senior preferred stock purchase agreement with the U.S. Department of the Treasury pursuant to which Treasury has committed to provide funding to FNMA under specified circumstances.

Certain other GSE securities are not backed by the full faith and credit of the U.S. Government and have no explicit financial support, including the Farm Credit System, Financing Corporation, and Resolution Funding Corporation.

Investors regard agency securities as having low credit risks, but not as low as Treasury securities. The Fund treats mortgage-backed securities guaranteed by a GSE as if issued or guaranteed by a federal agency. Although such a guarantee protects against credit risks, it does not reduce market and prepayment risks.

U.S. Treasury Obligations

For a discussion of U.S. Treasury Obligations, please see the “U.S. Government Securities” discussion above.

U.S. Treasury Security Futures Contracts and Options

U.S. Treasury security futures contracts require the seller to deliver, or the purchaser to take delivery of, the type of U.S. Treasury security called for in the contract at a specified date and price. Options on U.S. Treasury securities futures contracts give the purchaser the right in return for the premium paid to assume a position in a U.S. Treasury security futures contract at the specified option exercise price at any time during the period of the option. U.S. Treasury security futures contracts and options on such contracts may be used to hedge against movements in the value of tax-exempt securities.

Successful use of U.S. Treasury security futures contracts depends on the ability to predict the direction of interest rate movements and the effects of other factors on the value of debt securities. For example, the sale of U.S. Treasury security futures contracts is used to hedge against the possibility of an increase in interest rates which would adversely affect the value of tax-exempt securities held in the Fund’s portfolio. If, unexpectedly, the prices of the tax-exempt securities increase following a decline in interest rates, the Fund will lose part or all of the benefit of the increased value of its securities which it has hedged because it will have offsetting losses in its futures positions. In addition, in such situations, if the Fund has insufficient cash, it may have to sell securities to meet daily maintenance margin requirements at a time when it may be disadvantageous to do so.

There is also a risk that price movements in U.S. Treasury security futures contracts and related options will not correlate closely with price movements in markets for tax-exempt securities. For example, if the Fund has hedged against a decline in the values of tax-exempt securities held by it by selling U.S. Treasury securities futures and the value of U.S. Treasury securities subsequently increases while the value of its tax-exempt securities decreases, the Fund will incur losses on both its U.S. Treasury security futures contracts and its tax-exempt securities. The Advisor

or Sub-Advisor will seek to reduce this risk by monitoring movements in markets for U.S. Treasury security futures and options and for tax-exempt securities closely.

Warrants

Warrants are basically options to purchase common stock at a specific price (usually at a premium above the market value of the optioned common stock at issuance) valid for a specific period of time. Warrants may have a life ranging from less than a year to twenty years or may be perpetual. However, most warrants have expiration dates after which they are worthless. In addition, if the market price of the common stock does not exceed the warrant's exercise price during the life of the warrant, the warrant will expire as worthless. Warrants have no voting rights, pay no dividends, and have no rights with respect to the assets of the corporation issuing them. The percentage increase or decrease in the market price of the warrant may tend to be greater than the percentage increase or decrease in the market price of the optioned common stock.

When-issued and Delayed Delivery Transactions

When-issued and delayed delivery transactions are arrangements through which the Fund purchases securities with payment and delivery scheduled for a future time. No fees or other expenses, other than normal transaction costs, are incurred. However, liquid assets of the purchasing Fund sufficient to make payment for the securities are segregated on the Fund's records at the trade date. These assets are then marked to market daily and maintained until the transaction has been settled. A seller's failure to complete a transaction may cause the Fund to miss a desired price or yield. In addition, because of delayed settlement, the Fund may pay more than market value on the settlement date. The Advisor may choose to dispose of a commitment prior to settlement.

The Fund may invest up to 25% of its total assets in securities purchased on a when-issued or delayed delivery basis.

Zero-coupon Securities

Zero-coupon securities are debt obligations which are generally issued at a discount and payable in full at maturity, and which do not provide for current payments of interest prior to maturity. Zero-coupon securities usually trade at a deep discount from their face or par value and are subject to greater market value fluctuations from changing interest rates than debt obligations of comparable maturities which make current distributions of interest. As a result, the NAV of shares of the Fund investing in zero-coupon securities may fluctuate over a greater range than shares of other mutual funds investing in securities making current distributions of interest and having similar maturities.

Zero-coupon securities may include U.S. Treasury bills issued directly by the U.S. Treasury or other short-term debt obligations, and longer-term bonds or notes and their unmatured interest coupons which have been separated by their holder, typically a custodian bank or investment brokerage firm. A number of securities firms and banks have stripped the interest coupons from the underlying principal (the "corpus") of U.S. Treasury securities and resold them in custodial receipt programs with a number of different names, including TIGRS and CATS. The underlying U.S. Treasury bonds and notes themselves are held in book-entry form at the Federal Reserve Bank or, in the case of bearer securities (i.e., unregistered securities which are owned ostensibly by the bearer or holder thereof), in trust on behalf of the owners thereof.

In addition, the U.S. Treasury has facilitated transfers of ownership of zero-coupon securities by accounting separately for the beneficial ownership of particular interest coupons and corpus payments on U.S. Treasury securities through the Federal Reserve book-entry record-keeping system. The Federal Reserve program, as established by the U.S. Treasury Department, is known as "STRIPS" or "Separate Trading of Registered Interest and Principal of Securities." Under the STRIPS program, the Fund will be able to have its beneficial ownership of U.S. Treasury zero-coupon securities recorded directly in the book-entry record-keeping system in lieu of having to hold certificates or other evidence of ownership of the underlying U.S. Treasury securities. When debt obligations have been stripped of their unmatured interest coupons by the holder, the stripped coupons are sold separately. The principal or corpus is sold at a deep discount because the buyer receives only the right to receive a future fixed payment on the security and does not receive any rights to periodic cash interest payments. Once stripped or separated, the corpus and coupons may be sold separately.

Typically, the coupons are sold separately or grouped with other coupons with like maturity dates and sold in such bundled form. Purchasers of stripped obligations acquire, in effect, discount obligations that are economically identical to the zero-coupon securities issued directly by the obligor.

INVESTMENT RISKS

There are many factors which may affect an investment in the Fund. The Fund's principal risks are described in the Prospectus. Additional risk factors are outlined below.

Active Trading Risk

Active trading will cause the Fund to have an increased portfolio turnover rate, which is likely to generate shorter-term gains (losses) for its shareholders, which are taxed at a higher rate than longer-term gains (losses). Actively trading portfolio securities increases the Fund's trading costs and may have an adverse impact on the Fund's performance.

American Depository Receipts ("ADRs") and Domestically Traded Foreign Securities Risk

Because the Fund (except the Money Market Funds) may invest in ADRs and other domestically traded securities of foreign companies, the Fund's share price may be more affected by foreign economic and political conditions, taxation policies and accounting and auditing standards than would otherwise be the case. Foreign companies may not provide information as frequently or to as great an extent as companies in the United States. Foreign companies may also receive less coverage than U.S. companies by market analysts and the financial press. In addition, foreign companies may lack uniform accounting, auditing and financial reporting standards or regulatory requirements comparable to those applicable to U.S. companies. These factors may prevent the Fund and its Advisor from obtaining information concerning foreign companies that is as frequent, extensive and reliable as the information concerning companies in the United States.

Asset-Backed Securities Risk

Asset-backed securities include interests in pools of debt securities, commercial or consumer loans, or other receivables. The value of these securities depends on many factors, including changes in interest rates, the availability of information concerning the pool and its structure, the credit quality of the underlying assets, the market's perception of the servicer of the pool, and any credit enhancement provided. In addition, asset-backed securities have prepayment risks similar to mortgage-backed securities.

Call Risk

Call risk is the possibility that an issuer may redeem a fixed income security before maturity (a call) at a price below its current market price. An increase in the likelihood of a call may reduce the security's price.

If a fixed income security is called, the Fund may have to reinvest the proceeds in other fixed income securities with lower interest rates, higher credit risks, or other less favorable characteristics.

Class/Sector/Region Focus Risk

When the Fund invests more than 25% of its net assets in securities of issuers within a particular geographic region or business sector or asset class, such as real estate-related or commodities-related securities, it is subject to increased risk. Performance will generally depend on the region's performance, which may differ in direction and degree from that of the overall stock market. In addition, financial, economic, business and political developments affecting the region or sector may have a greater effect on the Fund than it would on a fund that did not focus on the sector, asset class or region.

Correlation Risk

A number of factors may affect the Fund's ability to achieve a high degree of correlation with its benchmark, and there can be no guarantee that the Fund will achieve a high degree of correlation. A failure to achieve a high degree

of correlation may prevent the Fund from achieving its investment objective. A number of factors may adversely affect the Fund's correlation with its benchmark, including fees, expenses, transaction costs, costs associated with the use of leveraged investment techniques, income items and accounting standards. The Fund may not have investment exposure to all securities in its underlying benchmark index, or its weighting of investment exposure to such stocks or industries may be different from that of the index. In addition, the Fund may invest in securities or financial instruments not included in the index underlying its benchmark. The Fund may be subject to large movements of assets into and out of the Fund, potentially resulting in the Fund being over- or under-exposed to its benchmark.

Activities surrounding annual index reconstitutions and other index rebalancing or reconstitution events may hinder the Fund's ability to meet their daily investment objective on that day. The Fund seeks to rebalance its portfolio daily to keep leverage consistent with the Fund's daily investment objective.

Counterparty Risk

The value of the Fund's investments may be adversely affected if a security's credit rating is downgraded; an issuer of an investment held by the Fund fails to pay an obligation on a timely basis, otherwise defaults or is perceived by other investors to be less creditworthy; or a counterparty to a derivatives or other transaction with the Fund files for bankruptcy, becomes insolvent, or otherwise becomes unable or unwilling to honor its obligation to the Fund.

Credit Enhancement Risk

The securities in which the Fund invests may be subject to credit enhancement (for example, guarantees, letters of credit or bond insurance). Credit enhancement is designed to assure timely payment of the security; it does not protect the Fund against losses caused by declines in a security's value due to changes in market conditions. Securities subject to credit enhancement generally would be assigned a lower credit rating if the rating were based primarily on the credit quality of the issuer without regard to the credit enhancement. If the credit quality of the credit enhancement provider (for example, a bank or bond insurer) is downgraded, the rating on a security credit enhanced by such credit enhancement provider also may be downgraded.

A single bank, bond insurer or other enhancement provider may provide credit enhancement to more than one of the Fund's investments. Having multiple securities credit enhanced by the same enhancement provider will increase the adverse effects on the Fund that are likely to result from a downgrading of, or a default by, such an enhancement provider. Adverse developments in the banking or bond insurance industries also may negatively affect the Fund, as the Fund may invest its assets in securities credit enhanced by banks or by bond insurers without limit. Bond insurers that provide credit enhancement for large segments of the fixed income markets, particularly the municipal bond market, may be more susceptible to being downgraded or defaulting during recessions or similar periods of economic stress.

Credit Risk

Credit risk is the possibility that an issuer may default on a security by failing to pay interest or principal when due. If an issuer defaults, the Funds will lose money.

Many fixed income securities receive credit ratings from NRSROs which assign ratings to securities by assessing the likelihood of issuer default. Lower credit ratings correspond to higher credit risk. If a security has not received a rating, the Funds must rely entirely upon the Advisor's credit assessment.

Fixed income securities generally compensate for greater credit risk by paying interest at a higher rate. The difference between the yield of a security and the yield of a U.S. Treasury security with a comparable maturity (the spread) measures the additional interest paid for risk. Spreads may increase generally in response to adverse economic or market conditions. A security's spread may also increase if the security's rating is lowered, or the security is perceived to have an increased credit risk. An increase in the spread will cause the price of the security to decline.

Derivative Contracts and Hybrid Instruments Risk

The Fund's investments in derivatives can significantly increase the Fund's exposure to market risk or credit risk of the counterparty. Derivatives also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the relevant assets, rates and indices.

When a derivative or other instrument is used as a hedge against an offsetting position that the Fund also holds, any loss generated by that derivative or other instrument will be substantially offset by the gains on the hedged security, and vice versa. To the extent the Fund uses a derivative security or other instrument for purposes other than as a hedge, or, if the Fund hedges imperfectly, the Fund is directly exposed to the risks of that derivative or other instrument and the risk that any loss generated by that derivative or other instrument will not be offset by a gain.

Derivative contracts and hybrid instruments involve risks different from, or possibly greater than, risks associated with investing directly in securities and other traditional investments. Specific risk issues related to the use of such contracts and instruments include valuation and tax issues, increased potential for losses and/or costs to the Fund, and a potential reduction in gains to the Fund. Each of these issues is described in greater detail in this prospectus. Derivative contracts and hybrid instruments may also involve other risks described in the prospectus or this SAI, such as market, interest rate, credit, currency, liquidity and leverage risks.

Emerging Markets Risk

In addition to all of the risks of investing in foreign developed markets, emerging market securities involve risks attendant to less mature and stable governments and economies, such as lower trading volume, trading suspension, security price volatility, repatriation restrictions, government confiscation, inflation, deflation, currency devaluation and adverse government regulations of industries or markets. As a result of these risks, the prices of emerging market securities tend to be more volatile than the securities of issuers located in developed markets.

Equity Securities Risk

Equity securities include common, preferred and convertible preferred stocks and securities the values of which are tied to the price of stocks, such as rights, warrants and convertible debt securities. Common and preferred stocks represent equity ownership in a company. Stock markets are volatile. The price of equity securities will fluctuate and can decline, reducing the value of the Fund. The price of equity securities fluctuates based on changes in a company's financial condition and overall market and economic conditions. The value of equity securities purchased by the Fund could decline if the financial condition of the companies in which the Fund is invested in declines or if overall market and economic conditions deteriorate.

Even Funds that invest in high quality or "blue chip" equity securities or securities of established companies with large market capitalizations (which generally have strong financial characteristics) can be negatively impacted by poor overall market and economic conditions. Companies with large market capitalizations may also have less growth potential than smaller companies and may be able to react less quickly to changes in the marketplace.

The Fund may maintain substantial exposure to equities and generally do not attempt to time the market. Because of this exposure, the possibility that stock market prices in general will decline over short or extended periods subjects the Fund to unpredictable declines in the value of their investments, as well as periods of poor performance.

Exchange-Traded Commodity Funds ("ETCFs") Risk

Commodities are tangible assets such as oil, agriculture, livestock, industrial metals, and precious metals such as gold or silver. The values of ETCFs are highly dependent on the prices of the commodities in which they invest; however, most ETCFs utilize futures trading to implement their strategies, which may produce returns that differ from those that would result from owning the underlying commodity. The demand and supply of these commodities may fluctuate widely based on such factors as interest rates, investors' expectations with respect to the rate of inflation, currency exchange rates, the production and cost levels of producing countries and/or forward selling by such producers, global or regional political, economic or financial events, purchases and sales by central banks, and trading activities by hedge funds and other commodity funds. ETCFs may use derivatives, such as futures, options and swaps, which exposes them to further risks, including counterparty risk (i.e., the risk that the institution on the other side of their trade will default). There may be times when the market price and NAV of an ETCF may vary significantly, and because the Fund buys and sells ETCFs at market price, it may pay more than NAV when buying an ETCF, and receive less than NAV when selling an ETCF. Additionally, an active trading market for an ETCF's shares may not develop or be maintained. The trading of an ETCF's shares may be halted if the listing exchange's officials deem such action appropriate, the shares are delisted from the exchange, or by the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) that halt stock trading generally. Finally, the Fund incurs certain transaction costs in purchasing and selling ETCFs in the secondary market.

Exchange-Traded Funds/Index-Based Securities Risk

An investment in an ETF or index-based security generally presents the same primary risks as an investment in a mutual fund that has the same investment objectives, strategies, and policies. The price of an ETF or index-based security can fluctuate up or down, and the Fund could lose money investing in an ETF or index-based security if the prices of the securities owned by the ETF or index-based security go down. In addition, ETFs and index-based securities may be subject to the following risks that do not apply to conventional mutual funds: (i) the market price of an ETF's or index-based security's shares may trade above or below their net asset value; (ii) an active trading market for an ETF's or index-based security's shares may not develop or be maintained; or (iii) trading of an ETF's or index-based security's shares may be halted if the listing exchange's officials deem such action appropriate, the shares are delisted from the exchange, or by the activation of market-wide "circuit breakers" (which are tied to large decreases in stock prices) that halt stock trading generally. See also "Ultrashort ETFs Risk" for further discussion on ETF Risk.

Extension Risk

Extension risk is the possibility that rising interest rates may cause prepayments on underlying obligations to occur at a slower than expected rate. This particular risk may effectively change a security which was considered short- or intermediate-term at the time of purchase into a long-term security. Long-term securities generally fluctuate more widely in response to changes in interest rates than short- or intermediate-term securities.

Foreign Custodial Services and Related Investment Costs Risk

Foreign custodial services and other costs relating to investment in international securities markets are generally more expensive than in the United States. Such markets have settlement and clearance procedures that differ from those in the United States. In certain markets, particularly emerging markets, there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions. Inability of the Fund to make intended securities purchases due to settlement problems could cause the Fund to miss attractive investment opportunities. Inability to dispose of a portfolio security caused by settlement problems could result in losses to the Fund due to a subsequent decline in value of the portfolio security. In addition, security settlement and clearance procedures in some emerging market countries may not fully protect the Fund against loss or theft of its assets.

Foreign Investment/Currency Risk

Compared with investing in the United States, investing in foreign markets involves a greater degree and variety of risk. Investors in international or foreign markets may face delayed settlements, currency controls and adverse economic developments as well as higher overall transaction costs. In addition, fluctuations in the U.S. dollar's value versus other currencies may erode or reverse gains from investments denominated in foreign currencies or widen losses. Exchange rates for currencies fluctuate daily. Foreign governments may expropriate assets, impose capital or currency controls, impose punitive taxes, impose limits on ownership or nationalize a company or industry. Any of these actions could have a severe effect on security prices and impair the fund's ability to bring its capital or income back to the U.S. Exchange rate fluctuations also may impair an issuer's ability to repay U.S. dollar denominated debt, thereby increasing credit risk of such debt. Finally, the value of foreign securities may be affected by incomplete, less frequent or inaccurate financial information about their issuers, social upheavals or political actions ranging from tax code changes to governmental collapse. Foreign companies may also receive less coverage than U.S. companies by market analysts and the financial press. In addition, foreign countries may lack uniform accounting, auditing and financial reporting standards or regulatory requirements comparable to those applicable to U.S. companies. These risks are greater in emerging markets. The combination of currency risk and market risk tends to make securities traded in foreign markets more volatile than securities traded exclusively in the United States.

Government Intervention and Extreme Volatility Risk

In the past, instability in the financial markets led the United States Government and other governments to take a number of unprecedented actions designed to support certain financial institutions and segments of the financial markets that experienced extreme volatility, and in some cases a lack of liquidity. Federal, state, and other governments, their regulatory agencies, or self-regulatory organizations could take actions that affect the regulation of the instruments in which the Fund invests, or the issuers of such instruments, in ways that are unforeseeable.

Legislation or regulation may also change the way in which the Funds themselves are regulated. Such legislation or regulation could limit or preclude the Fund's ability to achieve its investment objective.

Reduced liquidity in credit and fixed-income markets may adversely affect many issuers worldwide. Reduced liquidity may also result in less money being available to purchase raw materials, goods and services from emerging markets, which may, in turn, bring down the prices of these economic staples. It may also result in emerging market issuers having more difficulty obtaining financing, which may, in turn, cause a decline in their stock prices. If they arise, these issues may have an adverse effect on the Fund.

In the wake of the financial crises that began in 2008, the Federal Reserve System attempted to stabilize the U.S. economy and support the U.S. economic recovery by keeping the federal funds rate at or near zero percent. In addition, the Federal Reserve has purchased large quantities of securities issued or guaranteed by the U.S. government, its agencies or instrumentalities on the open market (the "quantitative easing program"). As a result, the United States is experiencing historically low interest rate levels. A low interest rate environment may have an adverse impact on the Fund's ability to provide a positive yield to its shareholders and pay expenses out of Fund assets because of the low yields from the Fund's portfolio investments.

However, continued economic recovery and the cessation of the quantitative easing program increase the risk that interest rates will rise in the near future and that the Fund will face a heightened level of interest rate risk. Federal Reserve policy changes may expose fixed-income and related markets to heightened volatility and may reduce liquidity for certain Fund investments, which could cause the value of the Fund's investments and the Fund's share price to decline or create difficulties for the Fund in disposing of investments. The Fund that invests in derivatives tied to fixed-income markets may be more substantially exposed to these risks than the Fund that does not invest in derivatives. If rising interest rates cause the Fund to lose enough value, the Fund could also face increased shareholder redemptions, which could force the Fund to liquidate its investments at disadvantageous times or prices, thereby adversely affecting the Fund. To the extent the Fund experiences high redemptions because of these policy changes, the Fund may experience increased portfolio turnover, which will increase the costs that the Fund incurs and lower the Fund's performance.

Hedging Risk

When a derivative (a security whose value is based on that of another security or index) is used as a hedge against an opposite position that a fund holds, any loss on the derivative should be substantially offset by gains on the hedged investment, and vice versa. Although hedging can be an effective way to reduce the Fund's risk, it may not always be possible to perfectly offset one position with another. As a result, there is no assurance that the Fund's hedging transactions will be effective.

Interest Rate Risk

Prices of fixed income securities rise and fall in response to changes in the interest rate paid by similar securities. Generally, when interest rates rise, prices of fixed income securities fall. However, market factors, such as the demand for particular fixed income securities, may cause the price of certain fixed income securities to fall while the prices of other securities rise or remain unchanged.

Interest rate changes have a greater effect on the price of fixed income securities with longer durations. Duration measures the price sensitivity of a fixed income security to changes in interest rates. See also Government Intervention and Extreme Volatility Risk.

Investment Style Risk

The risk that the particular type of investment on which the Fund focuses (such as small cap value stocks or large-cap growth stocks) may underperform other asset classes or the overall market. Individual market segments tend to go through cycles of performing better or worse than other types of securities. These periods may last as long as several years. Additionally, a particular market segment could fall out of favor with investors, causing the Fund that focuses on that market segment to underperform those that favor other kinds of securities.

Leverage Risk

Some transactions, such as derivatives, reverse repurchase agreements and dollar rolls, may give rise to a form of leverage, which may expose the Fund to greater risk and increase its costs. When transactions create leverage, adverse

changes in the value or level of the underlying asset, reference rate or index can result in a loss substantially greater than the amount invested in the derivatives or other instruments themselves. Certain transactions have the potential for unlimited loss, regardless of the size of the initial investments. Increases and decreases in the value of the securities held by the Fund and therefore in the Fund's net asset value will be magnified when the Fund uses leverage because leverage tends to increase the Fund's exposure to market risk, interest rate risk or other risks by, in effect, increasing assets available for investment.

To mitigate leverage risk, the Advisor will segregate liquid assets on the books of the Fund or otherwise cover the transactions. The use of leverage may cause the Fund to liquidate Fund positions when it may not be advantageous to do so to satisfy its obligations or to meet segregation requirements. The Fund will also have to pay interest on its borrowing, reducing the Fund's return. This interest expense may be greater than the Fund's return on the underlying investment.

Liquidity Risk

Liquidity risk refers to the possibility that the Fund may not be able to sell a security or close out a derivative contract when it wants to. If this happens, the Fund will be required to continue to hold the security or keep the position open, and the Fund could incur losses. OTC derivative contracts generally carry greater liquidity risk than exchange-traded contracts.

Management Risk

The risk that a strategy used by the Fund's portfolio manager may fail to produce the intended result. This includes the risk that changes in the value of a hedging instrument will not match those of the asset being hedged.

Manager Risk

The Advisor's or Sub-Advisor's selection of securities for the Fund may cause the Fund to underperform similar funds or relevant benchmarks.

Market Capitalization Risk

Stocks fall into three broad market capitalization categories—large, medium and small. The Fund that invests primarily in one of these categories carries the risk that due to current market conditions that category may be out of favor with investors. If valuations of large capitalization companies appear to be greatly out of proportion to the valuations of small or medium capitalization companies, investors may migrate to the stocks of small and medium-sized companies. Larger, more established companies may also be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. Investing in medium and small capitalization companies may be subject to special risks associated with narrower product lines, more limited financial resources, fewer experienced managers, dependence on a few key employees, and a more limited trading market for their stocks, as compared with larger companies. In addition, securities of these companies are subject to the risk that, during certain periods, the liquidity of particular issuers or industries will shrink or disappear with little forewarning as a result of adverse economic or market conditions, or adverse investor perceptions, whether or not accurate. Securities of medium and smaller capitalization issuers may therefore be subject to greater price volatility and may decline more significantly in market downturns than securities of larger companies. Smaller and medium capitalization issuers may also require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition, and may be susceptible to bankruptcy. Transaction costs for these investments are often higher than those of larger capitalization companies. There is typically less publicly available information about small capitalization companies. Some small and medium capitalization companies also may be relatively new issuers, which carries risks in addition to the risks of other medium and small capitalization companies. New issuers may be

more speculative because such companies are relatively unseasoned. These companies will often be involved in the development or marketing of a new product with no established market, which could lead to significant losses.

Market Risk

Market risk is the risk that the value of a security will move up or down, sometimes rapidly and unpredictably. These fluctuations, which are often referred to as “volatility,” may cause a security to be worth less than it was worth at an earlier time. Market risk may affect a single issuer, industry or sector of the economy or the market as a whole. Market risk is common to most investments, including stocks and bonds, and the mutual funds that invest in them. Bonds and other fixed income securities generally involve less market risk than stocks. The risks of investing in bonds, however, can vary significantly depending upon factors such as issuer and maturity. The bonds of some companies may be riskier than the stocks of others.

Mid/Small Cap Stock Risk

To the extent that the Fund invests in small cap and mid cap stocks, it takes on additional risks. Generally, the smaller the market capitalization of a company, the fewer the number of shares traded daily, the less liquid its stock and the more volatile its price. Market capitalization is determined by multiplying the number of its outstanding shares by the current market price per share. Companies with smaller market capitalizations also tend to have unproven track records, a limited product or service base and limited access to capital. These factors also increase risks and make these companies more likely to fail than companies with larger market capitalizations.

Mortgage-backed and Asset-backed Securities Risk

Mortgage-backed securities represent participating interests in pools of residential mortgage loans, some of which are guaranteed by the U.S. Government, its agencies or instrumentalities. However, the guarantee of these types of securities relates to the principal and interest payments and not the market value of such securities. In addition, the guarantee only relates to the mortgage-backed securities held by the Fund and not the purchase of shares of the Fund.

Mortgage-backed securities do not have a fixed maturity and their expected maturities may vary when interest rates rise or fall. An increased rate of prepayments on the Fund’s mortgage-backed securities will result in an unforeseen loss of interest income to the Fund as the Fund may be required to reinvest assets at a lower interest rate. A decreased rate of prepayments lengthens the expected maturity of a mortgage-backed security. The prices of mortgage-backed securities may decrease more than prices of other fixed-income securities when interest rates rise.

Collateralized Mortgage Obligations: The Fund may invest in mortgage-backed securities called collateralized mortgage obligations (“CMOs”). CMOs are issued in separate classes with different stated maturities. As the mortgage pool experiences prepayments, the pool pays off investors in classes with shorter maturities first. By investing in CMOs, the Fund may manage the prepayment risk of mortgage-backed securities. However, prepayments may cause the actual maturity of a CMO to be substantially shorter than its stated maturity.

Asset-backed Securities: Asset-backed securities include interests in pools of debt securities, commercial or consumer loans, or other receivables. The value of these securities depends on many factors, including changes in interest rates, the availability of information concerning the pool and its structure, the credit quality of the underlying assets, the market’s perception of the servicer of the pool, and any credit enhancement provided. In addition, asset-backed securities have prepayment risks similar to those of mortgage-backed securities.

Non-Investment Grade Securities Risk

The securities in which the Fund may invest may be rated below investment grade. Such securities are known as junk bonds. Junk bonds generally entail greater market, credit and liquidity risks than investment grade securities. For example, their prices are more volatile, economic downturns and financial setbacks may affect their prices more negatively, and their trading market may be more limited.

Prepayment Risk

Many types of fixed-income securities are subject to prepayment risk, including mortgage-backed securities. Prepayment risk occurs when the issuer of a security can repay principal prior to the security’s maturity. This is more

likely to occur when interest rates fall. The prepayment of principal can adversely affect the return of the Fund since it may have to reinvest the proceeds in securities that pay a lower interest rate.

Generally, mortgage-backed securities compensate for the increased risk associated with prepayments by paying a higher yield. The additional interest paid for risk is measured by the difference between the yield of a mortgage-backed security and the yield of a U.S. Treasury security with a comparable maturity (the spread). An increase in the spread may cause the price of the mortgage-backed security to decline. Spreads generally increase in response to adverse economic or market conditions. Spreads may also increase if the security is perceived to have an increased prepayment risk or is perceived to have less market demand.

Securities Linked to the Real Estate Market and REIT Risk

Investing in securities of companies in the real estate industry subjects the Fund to the risks associated with the direct ownership of real estate. These risks include:

- declines in the value of real estate;
- risks related to general and local economic conditions;
- possible lack of availability of mortgage funds;
- overbuilding;
- extended vacancies of properties;
- increased competition;
- increases in property taxes and operating expenses;
- change in zoning laws;
- losses due to costs resulting from the clean-up of environmental problems;
- liability to third parties for damages resulting from environmental problems;
- casualty or condemnation losses;
- limitations on rents;
- changes in neighborhood values and the appeal of properties to tenants; and
- changes in interest rates.

Therefore, for the Fund investing a substantial amount of its assets in securities of companies in the real estate industry, the value of the Fund's shares may change at different rates compared to the value of shares of the Fund with investments in a mix of different industries.

Securities of companies in the real estate industry include real estate investment trusts ("REITs") including equity REITs and mortgage REITs. Equity REITs may be affected by changes in the value of the underlying property owned by the trusts, while mortgage REITs may be affected by the quality of any credit extended. Further, equity and mortgage REITs are dependent upon management skills and generally may not be diversified. Equity and mortgage REITs are also subject to heavy cash flow dependency, defaults by borrowers and self-liquidations. In addition, equity and mortgage REITs could possibly fail to qualify for tax free pass-through of income under the Code, or to maintain their exemptions from registration under the 1940 Act. The above factors may also adversely affect a borrower's or a lessee's ability to meet its obligations to the REIT. In the event of a default by a borrower or lessee, the REIT may experience delays in enforcing its rights as a mortgagee or lessor and may incur substantial costs associated with protecting its investments.

In addition, even the larger REITs in the industry tend to be small to medium-sized companies in relation to the equity markets as a whole. See "Small and Medium Size Company Risk" for a discussion of the risks associated with investments in these companies.

Security-Specific Risk

Security-specific risk is the risk that the value of a particular security may or may not move in the same direction as the market as a whole. All Funds are subject to this type of risk.

Small and Medium Size Company Risk

Companies that are small or unseasoned (that is, less than three years of operating history) are more likely than larger or established companies to fail or not to accomplish their goals. As a result, the value of their securities could decline significantly. These companies are less likely to survive since they are often dependent upon a small number of products and may have limited financial resources and a small management group. Small or unseasoned companies often have a greater degree of change in earnings and business prospects than larger or established companies, resulting in more volatility in the price of their securities. The securities of small or unseasoned companies may have limited marketability. This factor could cause the value of the Fund's investments to decrease if it needs to sell such securities when there are few interested buyers. Small or unseasoned companies usually have fewer outstanding shares than larger or established companies. Therefore, it may be more difficult to buy or sell large amounts of these shares without unfavorably impacting the price of the security. There may be less publicly available information about small or unseasoned companies. Therefore, when making a decision to purchase a security for the Fund, the Advisor or Sub-Advisor may not be aware of problems associated with the company issuing the security. Investments in the securities of medium sized companies present risks similar to those associated with small or unseasoned companies although to a lesser degree due to the larger size of the companies.

Ultrashort ETFs Risk

Ultrashort ETFs use investment techniques that may be considered aggressive, including the use of futures contracts, options on futures contracts, securities and indices, forward contracts, swap agreements and similar instruments. An Ultrashort ETF's investment in financial instruments may involve a small investment relative to the amount of investment exposure assumed and may result in losses exceeding the amounts invested. Such instruments, particularly when used to create leverage, may expose the Ultrashort ETF and the Fund to potentially dramatic changes (losses or gains) in the value of the instruments and imperfect correlation between the value of the instruments and the security or index. The use of aggressive investment techniques also exposes the Fund to risks different from, or possibly greater than, the risks associated with investing directly in securities contained in an index underlying an Ultrashort ETF benchmark, including: (1) the risk that an instrument is mispriced; (2) credit or performance risk on the amount the Ultrashort ETF expects to receive from a counterparty; (3) the risk that securities prices, interest rates and currency markets will move adversely and the Ultrashort ETF will incur significant losses; (4) the risk that there may be imperfect correlation between the price of financial instruments and movements in the prices of the underlying securities; (5) the risk that the cost of holding a financial instrument might exceed its total return; and (6) the possible absence of a liquid secondary market for any particular instrument and/or possible exchange-imposed price fluctuation limits, which may make it difficult or impossible to adjust an Ultrashort ETF's position in a particular financial instrument when desired.

Unrated Securities Risk

To the extent that the Fund invests in unrated securities, these securities may prove less liquid than rated securities as less information is available regarding the securities and a market may not exist for the securities at a given point in time.

DISCLOSURE OF PORTFOLIO HOLDINGS

The Fund's Board of Trustees has adopted policies and procedures for the public and nonpublic disclosure of the Fund's portfolio securities. The Fund's portfolio holdings are currently disclosed to the public through filings with the SEC. The Fund discloses its portfolio holdings by mailing the annual and semi-annual reports to shareholders approximately two months after the end of the fiscal year and semi-annual period. In addition, the Fund discloses its portfolio holdings reports on Forms N-CSR and Form N-Q two months after the end of each quarter/semi-annual period

As a general matter, no information concerning the portfolio holdings of the Fund may be disclosed to any unaffiliated third party except (1) to service providers that require such information in the course of performing their duties (for example, the Fund's custodian, administrator, the Advisor, sub-advisor, independent public accountants, attorneys, officers and trustees) and are subject to a duty of confidentiality including a duty not to trade on non-public information, and (2) pursuant to certain exceptions that serve a legitimate business purpose. These exceptions may include: (1) disclosure of portfolio holdings only after such information has been publicly disclosed and (2) to third-party vendors, currently consisting of Morningstar Investment Services and Lipper Analytical Services that (a) agree

to not distribute the portfolio holdings or results of the analysis to third parties, other departments or persons who are likely to use the information for purposes of purchasing or selling the Fund before the portfolio holdings or results of the analysis become publicly available; and (b) sign a written confidentiality agreement. The confidentiality agreement must provide, but is not limited to, that the recipient of the portfolio holdings information agrees to limit access to the portfolio holdings information to its employees who, on a need to know basis are (1) authorized to have access to the portfolio holdings information and (2) subject to confidentiality obligations, including duties not to trade on non-public information, no less restrictive than the confidentiality obligations contained in the confidentiality agreement.

Neither the Fund nor the Advisor may enter into any arrangement providing for the disclosure of non-public portfolio holding information for the receipt of compensation or benefit of any kind. Any exceptions to the policies and procedures may only be made by the consent of the Trust’s chief compliance officer upon a determination that such disclosure serves a legitimate business purpose and is in the best interests of the Funds and will be reported to the Board at the Board’s next regularly scheduled meeting.

TRUSTEES AND OFFICERS

The following tables provide information about Board of Trustees and the senior officers of the Trust. Each of the Trustees is deemed to be an Independent Trustee of the Trust. Each Trustee oversees all portfolios of the Trust and serves for an indefinite term (subject to mandatory retirement provisions). Information about each Trustee is provided below and includes each person’s: name, address, age (as of the date of the Funds’ most recent fiscal year end), present position(s) held with the Trust, principal occupations for the past five years and total compensation received as a Trustee for the most recent fiscal year. Unless otherwise noted, the business address of each person listed below is c/o Mutual Fund and Variable Insurance Trust, 36 North New York Avenue, Huntington, NY 11743. Unless otherwise noted, each officer is elected annually by the Board. Each Trustee and officer also serves in the same capacity for the Strategy Shares, another open-end investment company whose series are managed by the Advisor. Collectively, the Funds, Strategy Shares, Mutual Fund Series Trust comprise the “Fund Complex”.

Independent Trustees

Name, Address and Year of Birth	Position with the Trust	Term of Office and Length of Time Served*	Principal Occupation(s) During Past 5 Years	Number of Portfolios in Fund Complex Overseen by Trustee**	Other Directorships Held During Past 5 Years
Tobias Caldwell Year of Birth: 1968	Chairman of the Board and Trustee	Since January 2016	Managing Member, Genovese Family Enterprises, LLC (1999 – present) (real estate firm); Managing member, PTL Real Estate, LLC (2000 – present) (real estate/investment firm); Managing member, Bear Properties, LLC (2006 - present) (real estate firm).	56	Chairman of the Board, Strategy Shares (2016-present); Lead Independent Trustee and Chair of Audit Committee, Mutual Fund Series Trust (2006- present); Independent Trustee and Chair of Audit Committee, Variable Insurance Trust (2010- present); Trustee, M3Sixty Trust (2016-present); Chairman of the Board, AlphaCentric Prime Meridian Income Fund (July 2018 to present).

Stephen P. Lachenauer	Chair of the Audit Committee and Trustee	Since January 2016	Attorney, private practice (2011 to present).	16	Trustee and Chair of the Audit Committee, Strategy Shares (2016 – present); Trustee, TCG Financial Series Trusts I-X (2015-present); Trustee and Chair of the Audit Committee, AlphaCentric Prime Meridian Income Fund (July 2018 – present).
Year of Birth: 1968					
Donald McIntosh	Trustee	Since January 2016	Credit risk review analyst, Santander Holdings USA (May 2015 – present); Governance analyst, Santander Bank (2011 – April 2015).	16	Trustee, Strategy Shares (2016– present); Trustee, TCG Financial Series Trusts I-X (2015-present); Trustee, AlphaCentric Prime Meridian Income Fund (July 2018 – present).
Year of Birth: 1969					

* The term of office of each Trustee is indefinite.

** The “Fund Complex” includes the Trust, Strategy Shares, Mutual Fund Series Trust, AlphaCentric Prime Meridian Income Fund and the TCG Financial Services Trusts I-X, each a registered open-end investment company.

Officers*

Name, Address, Year of Birth	Position(s) Held with Registrant	Term and Length Served*	Principal Occupation(s) During Past 5 Years

* Officers do not receive any compensation from the Trust.

COMMITTEE OF THE BOARD OF TRUSTEES

Audit Committee. The Board has an Audit Committee. The Audit Committee is comprised of each of the Trustees. The primary function of the Audit Committee is to assist the full Board in fulfilling its oversight responsibilities to the shareholders and the investment community relating to fund accounting, reporting practices and the quality and integrity of the financial reports. To satisfy these responsibilities, the Audit Committee reviews with the independent auditors, the audit plan and results and recommendations following independent audits, reviews the performance of the independent auditors and recommends engagement or discharge of the auditors to the full Board, reviews the independence of the independent auditors, reviews the adequacy of the Funds’ internal controls and prepares and submits Committee meeting minutes and supporting documentation to the full Board. The Audit Committee met 3 times during the fiscal year ended December 31, 2017.

Valuation Committee. The Valuation Committee is comprised of (1) either the Trust’s Treasurer or Assistant Treasures and (2) either the Trust’s Chief Compliance Officer or a Trustee that is independent of the advisor/sub-advisor and the fund involved in the subject valuation. The Valuation Committee is responsible for the valuation and revaluation of any portfolio investment for which market quotations or sale prices are not readily available. The Valuation Committee meets as is required. During the fiscal year ended December 31, 2017, the Valuation Committee held ten meetings.

Compensation of the Board of Trustees

The Independent Trustees are paid a quarterly retainer, and receive compensation for each committee meeting, telephonic Board meeting, and special in-person Board meeting attended. Officers receive no compensation from the Trust. The Trust reimburses each of the Independent Trustees for travel and other expenses incurred in connection with attendance at such meetings. The Trust has no retirement or pension plans.

The following table describes the compensation paid to the Trustees of the Trust during the most recent fiscal year ended December 31, 2017. The Trust has no retirement or pension plans. The Fund was not in operation during the Trust’s fiscal year ended December 31, 2017. The compensation amounts provided in the table below for the Fund is the estimated compensation to be paid by the Fund to the Trustees for the fiscal year ending December 31, 2019.

Compensation Table		
Name of Person, Position(s)	Aggregate Compensation from the Fund	Total Compensation from Fund Complex*
Tobias Caldwell	\$3,200	\$184,6000
Stephen. Lachenauer	\$3,200	\$53,600
Donald McIntosh	\$2,200	\$40,200

* The “Fund Complex” includes the Trust, Strategy Shares, Mutual Fund Series Trust, AlphaCentric Prime Meridian Income Fund and the TCG Financial Services Trusts I-X, each a registered open-end investment company.

TRUSTEES OWNERSHIP OF SHARES IN A FUND AND IN THE FUND COMPLEX AS OF DECEMBER 31, 2017

Name of Trustee	Dollar Range of Shares Owned in the Funds	Dollar Range of Shares Owned in the Fund Complex*
Tobias Caldwell	None	Over \$100,000
Stephen Lachenauer	None	None
Donald McIntosh	None	None

* The “Fund Complex” includes the Trust, Strategy Shares, Mutual Fund Series Trust, AlphaCentric Prime Meridian Income Fund and the TCG Financial Services Trusts I-X, each a registered open-end investment company.

None of the Trustees (including their immediate family members) owned beneficially or of record securities of the Advisor, Sub-Advisor or the Distributor or any entity directly or indirectly controlling, controlled by, or under common control with the Advisor, Sub-Advisor or Distributor as of the date of this SAI.

Qualifications and Experience of the Trustees

The following provides an overview of the considerations that led the Board to conclude that each individual serving as a Trustee of the Trust should so serve. Generally, no one factor was decisive in the original selection of an individual to join the Board. Among the factors the Board considered when concluding that an individual should serve on the Board were the following: (1) the individual’s business and professional experience and accomplishments; (2) the individual’s prior experience serving on the boards of public companies, and other complex enterprises and organizations; and (3) how the individual’s skills, experience, and attributes would contribute to an appropriate mix of relevant skills and experience on the Board.

In respect of each current Trustee, the individual’s substantial professional accomplishments and prior experience, including, in some cases, in fields related to the operations of the Trust, were a significant factor in the determination that the individual should serve as a Trustee of the Trust.

In addition to the information set forth above, the following sets forth additional information about the qualifications and experience of each of the Trustees that lead to the conclusion that each Trustee should serve as Trustee of the Trust.

Tobias Caldwell

Mr. Caldwell is the manager of a real estate investment firm. Mr. Caldwell has served on the boards of mutual funds for over ten years, including as chair of the audit committee for over ten years. Mr. Caldwell also serves as a Trustee of other mutual funds in the Fund Complex. His experience in the real estate and investment industries would provide the Board with an additional perspective and understanding of investment strategies used by advisors to the funds.

Stephen Lachenauer

Mr. Lachenauer has been an attorney in private practice for over six years, providing advice and counsel to small businesses and individuals on business and financial matters. Mr. Lachenauer’s previous experience at large law firms and as an attorney at a large investment bank provides the Board with knowledge of financial and investment regulatory matters. Mr. Lachenauer also serves on the boards of other registered investment companies.

Donald McIntosh

Mr. McIntosh is a credit risk review analyst for a large international financial services company, and he has many years of credit analysis and loan servicing experience. Mr. McIntosh's experience in evaluating companies' financial condition would provide the Board with knowledge about investment strategies used by the advisors of the funds. Mr. McIntosh also serves as a Trustee of other mutual funds in the Fund Complex.

Board Structure

The Board is responsible for overseeing the management and operations of the Trust. The Board consists of three Independent Trustees. The Chairperson of the Trust, Tobias Caldwell, is an Independent Trustee.

The Board has one standing Committee, the Audit Committee. The Audit Committee is comprised of each of the Trustees. Through the Audit Committee, the Independent Trustees consider and address important matters involving the Trust, including those presenting conflicts or potential conflicts of interest for Trust management. The Board holds four regular meetings each year to consider and address matters involving the Funds. The Board also may hold special meetings to address matters arising between regular meetings. In addition, the Independent Trustees regularly meet outside the presence of management and are advised by independent legal counsel. These meetings may take place in-person or by telephone.

The Board reviews its structure regularly and believes that its leadership structure, including having a super-majority of Independent Trustees, coupled with an Independent Chairperson, is appropriate and in the best interests of the Trust, given its specific characteristics. The Board of Trustees also believes its leadership structure facilitates the orderly and efficient flow of information to the Independent Trustees from Trust management.

When considering potential nominees to fill vacancies on the Board, and as part of its annual self-evaluation, the Board reviews the mix of skills and other relevant experiences of the Trustees.

Board Oversight of Risk

An integral part of the Board's overall responsibility for overseeing the management and operations of the Trust is the Board's oversight of the risk management of the Trust's investment programs and business affairs. The Fund is subject to a number of risks, such as investment risk, valuation risk, risk of operational failure or lack of business continuity, and legal, compliance and regulatory risk. The Fund, the Advisor, and other service providers to the Trust have implemented various processes, procedures, and controls to identify risks to the Fund, to lessen the probability of their occurrence, and to mitigate any adverse effect should they occur. Different processes, procedures, and controls are employed with respect to different types of risks.

The Board exercises oversight of the risk management process through the Audit Committee and through oversight by the Board itself. The Board holds four regular meetings each year to consider and address matters involving the Fund. The Board also may hold special meetings to address matters arising between regular meetings. In addition, the Independent Trustees regularly meet outside the presence of management and are advised by independent legal counsel. These meetings may take place in person or by telephone.

In addition to adopting, and periodically reviewing, policies and procedures designed to address risks to the Fund, the Board requires management of the Advisor and the Trust, including the Trust's Chief Compliance Officer ("CCO"), to report to the Board and the Audit Committee of the Board on a variety of matters, including matters relating to risk management, at regular and special meetings. The Board and the Audit Committee receive regular reports from the Trust's independent public accountants on internal control and financial reporting matters. On at least a quarterly basis, the Independent Trustees meet with the Trust's CCO, including outside the presence of management, to discuss issues related to compliance. Furthermore, the Board receives a quarterly report from the Trust's CCO regarding the operation of the compliance policies and procedures of the Trust and its primary service providers. The Board monitors the Fund's investment policies and procedures as well as valuation of the Fund's securities. The Board also receives quarterly reports from the Advisor on the investments and securities trading of the Fund, including their investment performance and asset weightings compared to appropriate benchmarks, as well as reports regarding the valuation of the Fund's securities. The Board also receives reports from the Trust's primary service providers regarding their operations as they relate to the Fund.

PRINCIPAL SHAREHOLDERS

Persons controlling the Fund can determine the outcome of any proposal submitted to the shareholders for approval, including changes to the Fund's fundamental policies or the terms of the advisory agreement with the advisor. Persons owning 25% or more of the outstanding shares of the Fund (or a class of shares of the Fund) may be deemed to control the Fund (or class of the Fund). As of the date of this Statement of Additional Information, each Fund had not yet commenced operations and had no shareholders. As of December 17, 2018, the Trustees and Officers, as a group, held less than 1% of the Fund's shares.

ADVISOR AND SUB-ADVISOR

Rational Advisors, Inc. has been retained by the Trust under a Management Agreement to act as the investment advisor to the Funds, subject to the authority of the Board of Trustees. The Advisor (formerly a wholly owned subsidiary of Huntington National Bank and known as Huntington Asset Advisors, Inc.) was organized under the laws of Ohio in 2001. The Advisor oversees the day-to-day investment decisions for the Fund and continuously reviews, supervises and administers the Fund's investment programs. The Advisor is under common control with Catalyst Capital Advisors LLC and AlphaCentric Advisors LLC, the investment advisers of other funds in the same group of investment companies also known as a "fund complex". The address of the Advisor is 36 North New York Avenue, Huntington, NY 11743.

The Management Agreement provides that the Advisor will provide the Fund with investment advice and supervision and will continuously furnish an investment program for the Fund consistent with the investment objectives and policies of the Fund. The Advisor is responsible for the payment of the salaries and expenses of all of its personnel, office rent and the expenses of providing investment advisory and related clerical expenses.

Under the terms of the Management Agreements, the Advisor manages the investment of the assets of the Fund in conformity with the investment objectives and policies of the Fund. It is the responsibility of the Advisor to make investment decisions for the Fund and to provide continuous supervision of the investment portfolio of the Fund.

For its services under the Management Agreement, the Advisor is paid a monthly management fee at the annual rates noted in the table below, based upon the average daily net assets of the Fund. The Advisor pays expenses incurred by it in connection with acting as advisor, other than costs (including taxes and brokerage commissions, borrowing costs, costs of investing in underlying funds and extraordinary expenses, if any) of securities purchased for the Fund and other expenses paid by the Fund as detailed in the Management Agreement. The Advisor pays for all employees, office space and facilities required by it to provide services under the Management Agreement, except for specific items of expense referred to below.

	Contractual Advisory Fee
Context Insurance Linked Income Fund	1.50%

Except for the expenses described above that have been assumed by the Advisor, all expenses incurred in administration of a Fund will be charged to the Fund, including investment management fees; fees and expenses of the Board of Trustees; interest charges; taxes; brokerage commissions; expenses of valuing assets; expenses of continuing registration and qualification of the Fund and the shares under federal and state law; share issuance expenses; fees and disbursements of independent accountants and legal counsel; fees and expenses of custodians, including sub-custodians and securities depositories, transfer agents and shareholder account servicing organizations; expenses of preparing, printing and mailing prospectuses, reports, proxies, notices and statements sent to shareholders; expenses of shareholder meetings; costs of investing in underlying funds; and insurance premiums. Each Fund is also liable for nonrecurring expenses, including litigation to which it may from time to time be a party. Expenses incurred for the operation of the portfolio, including the expenses of communications with its shareholders, are paid by the Fund.

The Advisor has contractually agreed to waive all or a portion of its investment advisory fee (based on average daily net assets) and/or reimburse certain operating expenses of the Fund to the extent necessary in order to limit each Fund's

total annual fund operating expenses (after the fee waivers and/or expense reimbursements, and exclusive of acquired fund fees and expenses, brokerage costs, interest, taxes and dividends, and extraordinary expenses) to not more than the levels set forth in the table below (based on the average daily net assets of each class of the Fund) through April 30, 2020. Under certain conditions, the Advisor may recapture operating expenses waived and/or reimbursed under this agreement for a period of three years after the fees were waived or reimbursed, if the recapture can be achieved within the lesser of the expense limits in effect at the time of such reimbursement and the expense limits in place at the time of the recapture, after taking into account the amounts recaptured. The Agreement shall terminate automatically upon the termination of the Management Agreement. The Advisor may elect in its discretion to terminate the Agreement for any period following the term period of the Agreement, but no such termination shall affect the obligation (including the amount of the obligation) of the Fund to repay amounts of waived fees or reimbursed expenses with respect to periods prior to such termination.

Fund	Expense Limitation
Context Insurance Linked Income Fund	1.75%, 2.00% and 2.75% of the average daily net assets of the Institutional Shares, Class A Shares and Class C Shares, respectively.

The Management Agreement with the Fund continues in effect for an initial two year term and then from year to year as long as its continuation is approved at least annually by the Board of Trustees, including a majority of the Trustees who are not “interested persons,” or by the shareholders of the Fund. The Management Agreement may be terminated at any time upon 60 days’ written notice by the Fund or by a majority vote of the outstanding shares or 90 days’ written notice by the Advisor and will terminate automatically upon assignment. A discussion of the matters considered by the Board in connection with the approval of the Management Agreement will be available in the Fund’s Semi-Annual Report to Shareholders dated June 30, 2019.

The Management Agreement provides that the Advisor shall not be liable for any error of judgment or mistake of law or for any loss suffered by the Trust in connection with the performance of its duties, except a loss resulting from a breach of fiduciary duty with respect to the receipt of compensation for services or a loss resulting from willful misfeasance, bad faith, or gross negligence on the part of the Advisor in the performance of its duties, or from reckless disregard of its duties and obligations thereunder.

From time to time, the Advisor may use a portion of its reasonable resources and profits to pay for certain administrative services provided by financial institutions for Shareholders of the Fund.

Sub-Advisor

Context Insurance Strategies, LLC, located at 401 City Ave., Suite 800, Bala Cynwyd, PA 19004, has been retained to act as the sub-advisor to the Fund under an Investment Sub-Advisory Agreement (“Sub-Advisory Agreement”) with the Advisor. The Advisor and the Trustees have chosen to engage Sub-Advisor’s services as sub-advisor to the Fund in part because of the Sub-Advisor’s management’s prior expertise and performance in advising other accounts similar in objective to that of the Fund.

As compensation for the sub-advisory services it provides to the Fund, the Advisor will pay the Sub-Advisor fifty percent of the net advisory fees paid by the Fund to the Advisor. For this purpose, “net advisory fees” mean advisory fees collected from the Fund (net of fee waivers due to expense caps) less any revenue sharing and asset-based fees paid to broker-dealers or custodians with assets in the Fund. The fee paid to the Sub-Advisor by the Advisor will be paid from the Advisor’s management fee and is not an additional cost to the Fund. The Sub-Advisory Agreement is effective for an initial two year period and continues in effect for successive twelve-month periods, provided that the Board of Trustees annually approves it for continuance. A discussion of the matters considered by the Board in connection with the approval of the Sub-Advisory Agreement will be available in the Fund’s Semi-Annual Report to Shareholders dated June 30, 2019.

Portfolio Managers

Peter Vloedman and Andrew Sterge are Portfolio Managers of the Fund and are jointly and primarily responsible for the day-to-day management of the Fund's portfolio.

Unless otherwise noted, the following information about the Fund's portfolio manager is provided as of October 31, 2018.

Total Other Accounts Managed

Portfolio Managers	Registered Investment Company Accounts	Assets Managed (\$ millions)	Pooled Investment Vehicle Accounts	Assets Managed (\$ millions)	Other Accounts	Assets Managed (\$ millions)
Peter Vloedman	None	N/A	None	N/A	None	N/A
Andrew Sterge	None	N/A	None	N/A	None	N/A

Other Accounts Managed Subject to Performance-Based Fees

Portfolio Managers	Registered Investment Company Accounts	Assets Managed (\$ millions)	Pooled Investment Vehicle Accounts	Assets Managed (\$ millions)	Other Accounts	Assets Managed (\$ millions)
Peter Vloedman	None	N/A	None	N/A	None	N/A
Andrew Sterge	None	N/A	None	N/A	None	N/A

Compensation.

Messrs. Sterge and Vloedman receive their compensation from Context Capital Partners, LP ("Context Partners"), the sole owner of the Sub-Advisor. The basis of Messrs. Sterge and Vloedman's compensations from Context Partners is a salary, discretionary bonus and 401K profit share.

Ownership.

The following table shows the dollar range of equity securities beneficially owned by the portfolio manager(s) in the Fund as of the date of this SAI.

Name of Portfolio Manager	Dollar Range of Equity Securities in the Fund
Peter Vloedman	None
Andrew Sterge	None

Potential Conflicts of Interest

Actual or apparent conflicts of interest may arise when a portfolio manager has day-to-day management responsibilities with respect to more than one fund or other accounts. More specifically, portfolio managers who manage multiple funds are presented with the following potential conflicts:

The management of multiple accounts may result in a portfolio manager devoting unequal time and attention to the management of each account. The management of multiple funds and accounts also may give rise to potential conflicts of interest if the funds and accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his time and investment ideas across multiple funds and accounts.

- With respect to securities transactions for the Fund, the Advisor or Sub-Advisor determines which broker to use to execute each order, consistent with the duty to seek best execution of the transaction. The portfolio manager may execute transactions for another fund or account that may adversely impact the value of

securities held by the Fund. Securities selected for funds or accounts other than the Fund may outperform the securities selected for the Fund.

- The appearance of a conflict of interest may arise where the Advisor or Sub-Advisor has an incentive, such as a performance-based management fee. The management of personal accounts may give rise to potential conflicts of interest; there is no assurance that the Fund's code of ethics will adequately address such conflicts. One of the portfolio managers' numerous responsibilities is to assist in the sale of Fund shares. Because the portfolio managers' compensation is indirectly linked to the sale of Fund shares, they may have an incentive to devote time to marketing efforts designed to increase sales of Fund shares.
- The Fund may invest in affiliated funds advised by the Advisor. The Advisor is subject to conflicts of interest in allocating the Fund's assets among the affiliated funds. The Advisor will receive more revenue when it selects an affiliated fund rather than an unaffiliated fund for inclusion in a Fund's portfolio. This conflict may provide an incentive for the Advisor to invest Fund assets in affiliated funds that perform less well than unaffiliated funds. The Advisor may have an incentive to allocate the Fund's assets to those affiliated funds for which the net advisory fees payable to the Advisor are higher than the fees payable by other affiliated funds.
- The Fund and Advisor or Sub-Advisor have each adopted a code of ethics that, among other things, permits personal trading by employees under conditions where it has been determined that such trades would not adversely impact client accounts. Nevertheless, the management of personal accounts may give rise to potential conflicts of interest, and there is no assurance that these codes of ethics will adequately address such conflicts.

Each the Advisor and the Fund has adopted certain compliance procedures which are designed to address these types of conflicts. However, there is no guarantee that such procedures will detect each and every situation in which a conflict arises.

CODE OF ETHICS

The Advisor, Sub-Advisor, Northern Lights Distributors, LLC (the "Distributor") and the Fund have adopted codes of ethics (each a "Code" and collectively the "Codes") under Rule 17j-1(c) of the 1940 Act. The purpose of each Code is to avoid potential conflicts of interest and to prevent fraud, deception or misconduct with respect to the Fund. Each Code permit personnel covered by the codes to invest in securities that may be purchased by the Fund, subject to the restrictions of the Code. The Codes are filed as exhibits to the Trust's registration statement.

TRANSFER AGENT, FUND ACCOUNTING AGENT AND ADMINISTRATOR

Gemini Fund Services, LLC ("GFS"), which has its principal office at 80 Arkay Drive., Hauppauge, New York 11788, serves as administrator, fund accountant and transfer agent for the Fund pursuant to a Fund Services Agreement (the "Agreement") with the Fund and subject to the supervision of the Board. GFS is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. GFS is an affiliate of the Distributor.

GFS may also provide persons to serve as officers of the Trust. Such officers may be directors, officers or employees of GFS or its affiliates.

The Agreement will remain in effect for an initial term of three years from the effective date for the Fund, and will continue in effect for successive twelve-month periods provided that such continuance is specifically approved at least annually by a majority of the Board. The Agreement is terminable by the Board or GFS on 90 days' written notice and may be assigned by either party, provided that the Trust may not assign this agreement without the prior written consent of GFS. The Agreement provides that GFS shall be without liability for any action reasonably taken or omitted pursuant to the Agreement.

Under the Agreement, GFS performs administrative services, including: (1) monitor the performance of administrative and professional services rendered to the Trust by other service providers; (2) monitor Fund holdings and operations for post-trade compliance with the Fund's registration statement and applicable laws and rules; (3) prepare and coordinate the printing of semi-annual and annual financial statements; (4) prepare selected management reports for performance and compliance analyses; (5) prepare and disseminate materials for and attend and participate in meetings of the Board; (6) determine income and capital gains available for distribution and calculate distributions required to meet regulatory, income, and excise tax requirements; (7) review the Trust's federal, state, and local tax returns as prepared and signed by the Trust's independent public accountants; (8) prepare and maintain the Trust's operating expense budget to determine proper expense accruals to be charged to each Fund to calculate its daily net asset value; (9) assist in and monitor the preparation, filing, printing and where applicable, dissemination of periodic reports to the Trustees, shareholders and the SEC, notices pursuant to Rule 24f-2, proxy materials and reports to the SEC on Forms N-CEN, N-CSR, N-Q and N-PX; (10) coordinate the Trust's audits and examinations by assisting the Fund's independent public accountants; (11) determine, in consultation with others, the jurisdictions in which shares of the Trust shall be registered or qualified for sale and facilitate such registration or qualification; (12) monitor sales of shares and ensure that the shares are properly and duly registered with the SEC; (13) monitor the calculation of performance data for the Fund; (14) prepare, or cause to be prepared, expense and financial reports; (15) prepare authorization for the payment of Trust expenses and pay, from Trust assets, all bills of the Trust; (16) provide information typically supplied in the investment company industry to companies that track or report price, performance or other information with respect to investment companies; (17) upon request, assist the Fund in the evaluation and selection of other service providers, such as independent public accountants, printers, EDGAR providers and proxy solicitors (such parties may be affiliates of GFS); and (18) perform other services, recordkeeping and assistance relating to the affairs of the Trust as the Trust may, from time to time, reasonably request.

GFS also provides the Fund with accounting services, including: (i) daily computation of net asset value; (ii) maintenance of security ledgers and books and records as required by the 1940 Act; (iii) production of the Fund's listing of portfolio securities and general ledger reports; (iv) reconciliation of accounting records; (v) calculation of yield and total return for the Fund; (vi) maintaining certain books and records described in Rule 31a-1 under the 1940 Act, and reconciling account information and balances among the Fund's custodian and Advisor; and (vii) monitoring and evaluating daily income and expense accruals, and sales and redemptions of shares of the Fund.

GFS also acts as transfer, dividend disbursing, and shareholder servicing agent for the Fund pursuant to the Agreement. Under the agreement, GFS is responsible for administering and performing transfer agent functions, dividend distribution, shareholder administration, and maintaining necessary records in accordance with applicable rules and regulations.

For the services rendered to the Fund by GFS, the Fund pays GFS the greater of an annual minimum fee or an asset based fee, which scales downward based upon net assets. The Fund also pays GFS for any out-of-pocket expenses.

MFund Services LLC ("MFund") provides the Fund with various management and administrative services. For these services, the Fund pays MFund an annual fixed fee and an asset-based fee, which scales downward based upon net assets, applied at the fund family level (i.e., all the funds in the Trust advised by the Advisor):

In addition, the Fund reimburses MFund for any reasonable out-of-pocket expenses incurred in the performance of its duties under the Management Services Agreement. Jerry Szilagyi is the controlling member of MFund Services, the controlling member of the Advisor, Catalyst Capital Advisors LLC and AlphaCentric Advisors LLC (each an investment advisor to certain series of the Trust), and a Trustee of the Trust.

COMPLIANCE SERVICES

Pursuant to a Compliance Services Agreements, MFund provides chief compliance officer services to the Funds. For these services, the Fund pays MFund a monthly base fee plus an asset-based fee. In addition, the Fund reimburses MFund for any reasonable out-of-pocket expenses incurred in the performance of its duties under the Services Agreement.

CUSTODIAN

The Huntington National Bank, 41 South High Street, Columbus, OH 43215, serves as the custodian of the Fund. The custodian has custody of all securities and cash of the Fund. The custodian, among other things, attends to the collection of principal and income and payment for and collection of proceeds of securities bought and sold by the Fund.

Brown Brothers Harriman & Co., 50 Post Office Square, Boston, MA 02110, serves as sub-custodian for the Fund's foreign assets.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The Fund's independent registered public accounting firm is Cohen & Company, Ltd., located at 1350 Euclid Ave., Suite 800, Cleveland, OH 44115. Shareholders will receive annual financial statements, together with a report of independent accountants, and semiannual unaudited financial statements of the Fund. Cohen & Company, Ltd. will report on the Fund's annual financial statements, review certain regulatory reports and the Fund's income tax returns, and perform other professional accounting, auditing, tax and advisory services when engaged to do so by the Fund.

COUNSEL

Thompson Hine LLP, 41 South High Street, Suite 1700, Columbus, Ohio 43215, serves as counsel for the Trust and the independent Trustees.

DISTRIBUTOR

Northern Lights Distributors, LLC, located at 17605 Wright Street, Omaha, Nebraska 68130 ("Distributor"), serves as the principal underwriter and national distributor for the shares of the Fund pursuant to an Underwriting Agreement with the Trust (the "Underwriting Agreement"). The Distributor is registered as a broker-dealer under the Securities Exchange Act of 1934 and each state's securities laws and is a member of FINRA. The offering of the Fund's shares is continuous. The Underwriting Agreement provides that the Distributor, as agent in connection with the distribution of Fund shares, will use its reasonable efforts to facilitate the sale of the Fund's shares.

The Underwriting Agreement provides that, unless sooner terminated, it will continue in effect for two years initially and thereafter shall continue from year to year, subject to annual approval by (a) the Board or a vote of a majority of the outstanding shares, and (b) by a majority of the Trustees who are not interested persons of the Trust or of the Distributor by vote cast in person at a meeting called for the purpose of voting on such approval.

The Underwriting Agreement may be terminated by the Fund at any time, without the payment of any penalty, by vote of a majority of the entire Board of the Trust or by vote of a majority of the outstanding shares of the Fund on 60 days' written notice to the Distributor, or by the Distributor at any time, without the payment of any penalty, on 60 days' written notice to the Fund. The Underwriting Agreement will automatically terminate in the event of its assignment.

12b-1 Plans

As a compensation-type plan, the Rule 12b-1 Plan is designed to pay a financial intermediary (including the Distributor, the Advisor and their affiliates) for activities principally intended to result in the sale of Shares such as advertising and marketing of Shares (including printing and disseminating prospectuses and sales literature to prospective shareholders and financial intermediaries) and providing incentives to financial intermediaries to sell Shares. The Plan is also designed to cover the cost of administrative services performed in conjunction with the sale of Shares, including, but not limited to, shareholder services, recordkeeping services and educational services, as well as the costs of implementing and operating the Plan. In accordance with the Distribution Plan, the Distributor or the Fund may enter into agreements with financial intermediaries and dealers relating to distribution and/or marketing services with respect to the Class A Shares, Class C Shares and Institutional Shares of the Fund. The Distributor or the Fund may also enter into Rule 12b-1 related agreements with financial institutions (including fiduciaries, custodians for public funds, and investment advisers) to provide distribution related and other services with respect to

each class of shares. The Rule 12b-1 Plan may benefit the Fund in a number of ways. For example, it is anticipated that the Plan may help the Fund attract and retain assets, thus providing cash for orderly portfolio management and Share redemptions and possibly helping to stabilize or reduce other operating expenses.

In addition, the Plan is integral to the multiple class structure of the Fund, which promotes the sale of Shares by providing a range of options to investors. The Fund's service providers that receive asset-based fees also benefit from stable or increasing Fund assets.

Under the 12b-1 Plan, the Fund may compensate a financial intermediary more or less than its actual marketing and administrative expenses. In no event will the Fund pay for any expenses of a financial intermediary that exceed the maximum Rule 12b-1 Plan fee.

The fee paid to the Advisor and/or Distributor by the Fund is computed on an annualized basis reflecting the average daily net assets of the class. The maximum distribution and service fee for Class A, and Institutional shares is 0.25% of the average daily net assets of the class of shares. Class C Shares of the Fund pays a maximum distribution and service fee of 1.00% of the Fund's Class C Shares' average daily net assets. Of this amount, 0.75% represents distribution 12b-1 fees and 0.25% represents shareholder servicing fees. The 12b-1 Plan has not been implemented for the Institutional Shares and there are no plans to impose these fees.

SHAREHOLDER SERVICES

With respect to Class A, Class C and Institutional Shares, the Fund may pay a shareholder servicing fee of up to 0.25% of its average daily net assets to financial intermediaries, including the Distributor, the Advisor and their affiliates for providing shareholder services and maintaining shareholder accounts. The financial intermediary may select others to perform these services for their customers and may pay them fees.

ADDITIONAL COMPENSATION TO FINANCIAL INTERMEDIARIES

The Fund may directly enter into agreements with "financial intermediaries" pursuant to which the Fund will pay the financial intermediary for services such as networking or sub-transfer agency, including the maintenance of "street name" or omnibus accounts and related sub-accounting, record-keeping and administrative services provided to such accounts. Payments made pursuant to such agreements are generally based on either: (1) a percentage of the average daily net assets of clients serviced by such financial intermediary, or (2) the number of accounts serviced by such financial intermediary. Any payments made pursuant to such agreements are in addition to, rather than in lieu of, Rule 12b-1 or shareholder service fees the financial intermediary may also be receiving. From time to time, the Advisor or its affiliates may pay a portion of the fees for networking or sub-transfer agency at its or their own expense and out of its or their legitimate profits. These payments may be material to financial intermediaries relative to other compensation paid by the Fund and/or the Underwriter, the Advisor and their affiliates. The payments described above may differ and may vary from amounts paid to the Fund's transfer agent or other service providers for providing similar services to other accounts. The financial intermediaries are not audited by the Fund, the Advisor or their service providers to determine whether such intermediaries are providing the services for which they are receiving such payments.

The Advisor or affiliates of the Advisor may also, at their own expense and out of their own legitimate profits, provide additional cash payments to financial intermediaries who sell shares of the Fund. These additional cash payments are payments over and above sales commissions or reallowances, distribution fees or servicing fees (including networking, administration and sub-transfer agency fees) payable to a financial intermediary which are disclosed elsewhere in the prospectus or this SAI. These additional cash payments are generally made to financial intermediaries that provide sub-accounting, sub-transfer agency, shareholder or administrative services or marketing support. Marketing support may include: (i) access to sales meetings or conferences, sales representatives and financial intermediary management representatives; (ii) inclusion of the Fund on a sales list, including a preferred or select sales list, or other sales programs to which financial intermediaries provide more marketing support than to other sales programs on which the Advisor or its affiliates may not need to make

additional cash payments to be included; (iii) promotion of the sale of the Fund's shares in communications with a financial intermediary's customers, sales representatives or management representatives; and/or (iv) other specified services intended to assist in the distribution and marketing of the Fund's shares. These additional cash payments also may be made as an expense reimbursement in cases where the financial intermediary provides shareholder services to Fund shareholders. The Advisor and its affiliates may also pay cash compensation in the form of finders' fees or referral fees that vary depending on the dollar amount of shares sold.

The amount and value of additional cash payments vary for each financial intermediary. The availability of these additional cash payments, the varying fee structure within a particular additional cash payment arrangement and the basis for and manner in which a financial intermediary compensates its sales representatives may create a financial incentive for a particular financial intermediary and its sales representatives to recommend the Fund's shares over the shares of other mutual funds based, at least in part, on the level of compensation paid. A financial intermediary and its sales representatives may have similar financial incentives to recommend a particular class of the Fund's shares over other classes of the Fund's shares. You should consult with your financial adviser and review carefully any disclosure by the financial firm as to compensation received by your financial adviser.

Although the Fund may use financial firms that sell its shares to effect portfolio transactions for the Fund, the Fund and the Advisor will not consider the sale of Fund shares as a factor when choosing financial firms to effect those transactions.

PROXY VOTING POLICY

The Board of Trustees of the Trust has delegated responsibilities for decisions regarding proxy voting for securities held by the Fund to the Sub-Advisor. The Sub-Advisor may delegate such proxy voting to a third party proxy voting service provider. The proxy voting delegate will vote such proxies in accordance with its proxy policies and procedures. In some instances, the proxy voting delegate may be asked to cast a proxy vote that presents a conflict between its interests and the interests of the Fund's shareholders. In such a case, the Trust's policy requires that the proxy voting delegate abstain from making a voting decision and to forward all necessary proxy voting materials to the Trust to enable the Board of Trustees to make a voting decision. When the Board of Trustees of the Trust is required to make a proxy voting decision, only the Trustees without a conflict of interest with regard to the security in question or the matter to be voted upon shall be permitted to participate in the decision of how the Fund's vote will be cast. Each proxy voting delegate has developed a detailed proxy voting policy that has been approved by the Board of Trustees. The Sub-Advisor's Proxy Voting Policies are attached hereto as Appendix B.

Information on how the Fund voted proxies relating to portfolio securities, for the most-recent one year period ended June 30, is available without charge, upon request, by calling 800-253-0412 or on the SEC's Internet site at www.sec.gov. In addition, a copy of the Fund's proxy voting policies and procedures is also available by calling 800-253-0412 and will be sent within three business days of receipt of a request.

PORTFOLIO TURNOVER

Turnover rates are primarily a function of the Fund's response to market conditions. Since the Fund has not commenced operations as of the end of the Trust's last fiscal year, it does not have any annual portfolio turnover data to report. Such information will be provided in future filings.

PORTFOLIO TRANSACTIONS

Purchases and sales of securities on a securities exchange are effected by brokers, and the Fund pays a brokerage commission for this service. In transactions on stock exchanges, these commissions are negotiated. In the over-the-counter market, securities (e.g., debt securities) are normally traded on a "net" basis with dealers acting as principal for their own accounts without a stated commission, although the price of the securities usually includes a profit to the dealer. In underwritten offerings, securities are purchased at a fixed price, which includes an amount of compensation to the underwriter, generally referred to as the underwriter's concession or discount.

The primary consideration in placing portfolio security transactions with broker-dealers for execution is to obtain and maintain the availability of execution at the most favorable prices and in the most effective manner possible. The Advisor attempts to achieve this result by selecting broker-dealers to execute portfolio transactions on behalf of the Fund on the basis of the broker-dealers' professional capability, the value and quality of their brokerage services and the level of their brokerage commissions.

Although commissions paid on every transaction will, in the judgment of the Advisor, be reasonable in relation to the value of the brokerage services provided, under the Management Agreement and as permitted by Section 28(e) of the Securities Exchange Act of 1934, the Advisor may cause the Fund to pay a commission to broker-dealers who provide brokerage and research services to the Advisor for effecting a securities transaction for the Fund. Such commission may exceed the amount other broker-dealers would have charged for the transaction, if the Advisor determines in good faith that the greater commission is reasonable relative to the value of the brokerage and the research and investment information services provided by the executing broker-dealer viewed in terms of either a particular transaction or the Advisor's overall responsibilities to the Fund and to its other clients. Such research and investment information services may include advice as to the value of securities, the advisability of investing in, purchasing or selling securities, the availability of securities or of purchasers or sellers of securities, furnishing analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy and the performance of accounts, and effecting securities transactions and performing functions incidental thereto such as clearance and settlement.

Research provided by brokers is used for the benefit of all of the clients of the Advisor and not solely or necessarily for the benefit of the Fund. The Advisor's investment management personnel attempt to evaluate the quality of research provided by brokers. Results of this effort are sometimes used by the Advisor as a consideration in the selection of brokers to execute portfolio transactions.

The investment advisory fees that the Fund pays to the Advisor will not be reduced as a consequence of the Advisor's receipt of brokerage and research services. To the extent the Fund's portfolio transactions are used to obtain such services, the brokerage commissions paid by the Fund will exceed those that might otherwise be paid, by an amount, which cannot be presently determined. Such services would be useful and of value to the Advisor in serving both the Fund and other clients and, conversely, such services obtained by the placement of brokerage business of other clients would be useful to the Advisor in carrying out its obligations to the Fund.

Certain investments may be appropriate for the Fund and also for other clients advised by the Advisor. Investment decisions for the Fund and other clients are made with a view to achieving their respective investment objectives and after consideration of such factors as their current holdings, availability of cash for investment and the size of their investments generally. To the extent possible, Fund transactions are traded separately from trades of other clients advised by the Advisor. Occasionally, a particular security may be bought or sold for one or more clients in different amounts. In such event, and to the extent permitted by applicable law and regulations, such transactions with respect to the Advisor will be allocated among the clients in a manner believed to be equitable to each. Ordinarily, such allocation will be made on the basis of the weighted average price of such transactions effected during a trading day.

The Fund has no obligation to deal with any broker or dealer in the execution of its transactions. However, the Fund may place substantially all or a significant portion of its transactions, both in stocks and options, with affiliates of the Advisor or the Distributor. As the level of securities trading increases, the level of commissions paid by the Fund to the affiliates increases. Such transactions will be executed at competitive commission rates through the affiliated broker's clearing broker. Because the affiliates receive compensation based on the amount of transactions completed, there could be an incentive on the part of the Advisor to effect as many transactions as possible thereby maximizing the commissions and premiums it receives. In connection with the execution of transactions, subject to its policy of best execution, the Fund may pay higher brokerage commissions to the affiliate than it might pay to unaffiliated broker-dealers.

In order for the affiliated broker to effect any portfolio transactions for the Fund on an exchange, the commissions, fees or other remuneration received by the affiliated broker must be reasonable and fair compared to the commissions, fees or other remuneration paid to other brokers in connection with comparable transactions involving similar securities being purchased or sold on an exchange during a comparable period of time. This standard would allow the

affiliated broker to receive no more than the remuneration that would be expected to be received by an unaffiliated broker in a commensurate arms-length transaction.

Under the Investment Company Act of 1940, persons affiliated with the Advisor or the Distributor, or an affiliate of the Advisor (such as J.A. Glynn Investments, LLC, a wholly-owned subsidiary of J.A. Glynn & Co.) or the Distributor, may be prohibited from dealing with the Fund as a principal in the purchase and sale of securities. Therefore, affiliates of the Advisor or Distributor will not serve as the Fund's dealer in connection with over-the-counter transactions. However, affiliates of the Advisor may serve as the Fund's broker in over-the-counter transactions conducted on an agency basis and will receive brokerage commissions in connection with such transactions. Such agency transactions will be executed through the clearing broker.

The Fund will not effect any brokerage transactions in its portfolio securities with an affiliate if such transactions would be unfair or unreasonable to Fund shareholders, and the commissions will be paid solely for the execution of trades and not for any other services. The Investment Advisory Agreements provide that affiliates of affiliates of the Advisor may receive brokerage commissions in connection with effecting such transactions for the Fund. In determining the commissions to be paid to an affiliated broker, it is the policy of the Trust that such commissions will, in the judgment of the Trust's Board of Trustees, be (a) at least as favorable to the Fund as those which would be charged by other qualified brokers having comparable execution capability and (b) at least as favorable to the Fund as commissions contemporaneously charged by the affiliated broker on comparable transactions for its most favored unaffiliated customers, except for customers of the affiliated broker considered by a majority of the Trust's disinterested Trustees not to be comparable to the Fund. The disinterested Trustees from time to time review, among other things, information relating to the commissions charged by an affiliated broker to the Fund and its other customers, and rates and other information concerning the commissions charged by other qualified brokers.

The Agreement does not provide for a reduction of the Distributor's or Advisor's fee by the amount of any profits earned by an affiliated broker from brokerage commissions generated from portfolio transactions of the Fund. While other brokerage business may be given from time to time to other firms, the affiliated brokers will not receive reciprocal brokerage business as a result of the brokerage business placed by the Fund with others.

The Fund will not acquire portfolio securities issued by, or enter into repurchase agreements or reverse repurchase agreements with, the Advisor, the Distributor or their affiliates.

PURCHASE AND REDEMPTION OF SHARES

Fund shares may be purchased from investment dealers who have sales agreements with the Fund's Distributor or from the Distributor directly. As described in the Prospectus, the Fund provides you with alternative ways of purchasing Fund shares based upon your individual investment needs and preferences by offering multiple classes of shares. Additional information about sales charges (loads) for the purchase of Class A shares of the Fund is below.

Shares may be purchased at the public offering price through any securities dealer having a sales agreement with the Distributor. Shares may also be purchased through banks and certain other financial institutions that have agency agreements with the Distributor. These financial institutions will receive transaction fees that are the same as the commissions to dealers and may charge their customers service fees relating to investments in the Fund. Purchase requests should be addressed to the dealer or agent from which the Prospectus was received which has a sales agreement with the Distributor. Such dealer or agent may place a telephone order with the Distributor for the purchase of Fund shares. It is a dealer's or broker's responsibility to promptly forward payment and registration instructions (or completed applications) to the Transfer Agent for shares being purchased in order for investors to receive the next determined net asset value (or public offering price). Reference should be made to the wire order to ensure proper settlement of the trade.

Reference should be made to the wire order to ensure proper settlement of the trade. Payment for redemptions of shares purchased by telephone should be processed within three business days. Payment must be received within seven days of the order or the trade may be canceled, and the dealer or broker placing the trade will be liable for any losses.

Class A Shares

You may purchase Class A shares at a public offering price equal to the applicable net asset value per share plus an up-front sales charge imposed at the time of purchase as set forth in the Prospectus.

18f-1 Election

The Trust has elected to be governed by Rule 18f-1 under the 1940 Act pursuant to which the Trust is obligated during any 90 day period to redeem shares for any one shareholder of record solely in cash up to the lesser of \$250,000 or 1% of the NAV of the Fund at the beginning of such period. The Trust has made this election to permit certain funds of the Trust to deliver, in lieu of cash, readily marketable securities from its portfolio should a redemption exceed such limitations. The securities delivered will be selected at the sole discretion of such Fund, will not necessarily be representative of the entire portfolio and may be securities, which the Fund would otherwise sell. The redeeming shareholder will usually incur brokerage costs in converting the securities to cash. The method of valuing securities used to make the redemptions in kind will be the same as the method of valuing portfolio securities and such valuation will be made as of the same time the redemption price is determined. However, the Board of Trustees of the Trust has determined that, until otherwise approved by the Board, all redemptions in the Fund be made in cash only. If the Board determines to allow the Fund to redeem in kind in the future, the Fund will provide shareholders with notice of such change to the redemption policy.

SALES CHARGE WAIVERS AND REDUCTIONS AVAILABLE THROUGH CERTAIN FINANCIAL INTERMEDIARIES

The availability of certain sales charge waivers and discounts may depend on whether you purchase your shares directly from the Fund or through a financial intermediary. Intermediaries may impose different sales charges other than those listed below for Class A and Class C shares and may have different policies and procedures regarding the availability of sales load and waivers or reductions. Such intermediary-specific sales charge variations are described in Appendix A to the prospectus, titled “Intermediary-Specific Sales Charge Reductions and Waivers”. Appendix A is incorporated by reference into (or legally considered part of) the prospectus.

In all instances, it is the shareholder’s responsibility to notify the Fund or the shareholder’s financial intermediary at the time of purchase of any relationship or other facts qualifying the shareholder for sales charge reductions or waivers. For reductions and waivers not available through a particular intermediary, shareholders will have to purchase Fund shares directly from the Fund or through another intermediary to receive these reductions or waivers.

REDUCTION OF UP-FRONT SALES CHARGE ON CLASS A SHARES

Letters of Intent

An investor may qualify for a reduced sales charge on Class A shares immediately by stating his or her intention to invest in Class A shares of the Fund, during a 13-month period, an amount that would qualify for a reduced sales charge shown in the Fund’s Prospectus under “How to Buy Shares — Class A Shares” and by signing a non-binding Letter of Intent, which may be signed at any time within 90 days after the first investment to be included under the Letter of Intent. After signing the Letter of Intent, each investment in Class A shares made by an investor will be entitled to the sales charge applicable to the total investment indicated in the Letter of Intent. If an investor does not complete the purchases under the Letter of Intent within the 13-month period, the sales charge will be adjusted upward, corresponding to the amount actually purchased. When an investor signs a Letter of Intent, Class A shares of the Fund with a value of up to 5% of the amount specified in the Letter of Intent will be restricted. If the total purchases of Class A shares made by an investor under the Letter of Intent, less redemptions, prior to the expiration of the 13-month period equals or exceeds the amount specified in the Letter of Intent, the restriction on the shares will be removed. In addition, if the total purchases of Class A shares exceed the amount specified and qualify for a further quantity discount, the Distributor will make a retroactive price adjustment and will apply the adjustment to purchase additional Class A shares at the then current applicable offering price. If an investor does not complete purchases under a Letter of Intent, the sales charge is adjusted upward, and, if after written notice to the investor, he or she does not pay the increased sales charge, sufficient Class A restricted shares will be redeemed at the current net asset value to pay such

charge. You should retain any records necessary to substantiate historical costs of share purchases because the Fund, the transfer agent and any financial intermediaries may not maintain this information.

Rights of Accumulation

A right of accumulation ("ROA") permits an investor to aggregate shares owned by the investor, his spouse, children and grandchildren under 21 (cumulatively, the "Investor") in some or all Funds in the Trust to reach a breakpoint discount. This includes accounts held with other financial institutions and accounts established for a single trust estate or single fiduciary account, including a qualified retirement plan such as an IRA, 401(k) or 403(b) plan (some restrictions may apply). The value of shares eligible for a cumulative quantity discount equals the cumulative cost of the shares purchased (not including reinvested dividends) or the current account market value; whichever is greater. The current market value of the shares is determined by multiplying the number of shares by the previous day's net asset value.

- (a) Investor's current purchase of Class A shares in the Fund; and
- (b) The net asset value (at the close of business on the previous day) of the Class A shares of the Fund held by Investor.

For example, if Investor owned Class A shares worth \$40,000 at the current net asset value and purchased an additional \$10,000 of Class A shares, the sales charge for the \$10,000 purchase would be at the rate applicable to a single \$50,000 purchase.

To qualify for a ROA on a purchase of Class A shares through a broker-dealer, when each purchase is made, the individual investor or the broker-dealer must provide the Fund with sufficient information to verify that the purchase qualifies for the discount.

If you plan to rely on this right of accumulation, you must notify the Fund's distributor, Northern Lights Distributors, LLC, directly or through your financial intermediary, at the time of your purchase. You will need to give the distributor or your financial intermediary your account numbers. If applicable, you will need to provide the account numbers of your spouse and your minor children as well as the ages of your minor children.

Investments of \$1 Million or More

With respect to Class A shares, if you invest \$1 million or more, either as a lump sum or through our rights of accumulation quantity discount or letter of intent programs, you can buy Class A shares without an initial sales charge. However, you may be subject to a 1% contingent deferred sales charge ("CDSC") on shares redeemed within two years of purchase (excluding shares purchased with reinvested dividends and/or distributions).

WAIVERS OF UP-FRONT SALES CHARGE ON CLASS A SHARES

The Prospectus describes the classes of persons that may purchase shares without an up-front sales charge. The elimination of the up-front sales charge for redemptions by certain classes of persons is provided because of anticipated economies of scale and sales related efforts.

To qualify for a waiver of the up-front sales charge on a purchase of Class A shares through a broker-dealer, when each purchase is made, the individual investor or the broker-dealer must provide the Fund with sufficient information to verify that the purchase qualifies for the discount.

The Fund makes available, free of charge, more information about sales charge reductions and waivers through the prospectus.

WAIVERS OF DEFERRED SALES CHARGE ON CLASS C SHARES

Class C Shares are sold without an initial front-end sales charge, but a deferred sales charge of 1.00% applies, however, if Class C Shares are sold within 12 months of purchase.

FRONT-END SALES CHARGE REALLOWANCES

The Distributor receives a front-end sales charge on certain Share sales. The Distributor generally pays a portion of this charge to eligible financial intermediaries for sales of Fund shares and/or administrative services. The Distributor retains any portion not paid to a financial intermediary, and can make this available for marketing and sales-related activities and expenses, including those of the Advisor and its affiliates.

SHAREHOLDER RIGHTS

The Trust is an open-end management investment company, whose Declaration of Trust permits the Trust to offer separate series of Shares of beneficial interest, representing interests in separate portfolios of securities. The Shares in any one portfolio may be offered in two or more separate classes. As of the date of this SAI, the Trustees have established four classes of Shares, known as Class A Shares, Class C Shares and Institutional Shares. Class A Shares, Class C Shares, and Institutional Shares, of the Fund are fully transferable. Each class is entitled to dividends from the respective class assets of the Fund as declared by the Trustees, and if the Trust (or the Fund) were liquidated, the shareholders of each class would receive the net assets of the Fund attributable to each respective class.

All shareholders are entitled to one vote for each Share held on the record date for any action requiring a vote by the shareholders and a proportionate fractional vote for each fractional Share held. Shareholders of the Trust will vote in the aggregate and not by Fund or class except (i) as otherwise expressly required by law or when the Trustees determine that the matter to be voted upon affects only the interests of the shareholders of the Fund or class, or (ii) only holders of Class A Shares, Class C Shares will be entitled to vote on matters submitted to shareholder vote with respect to the Rule 12b-1 Plan applicable to such class or classes.

The rights of shareholders cannot be modified without a majority vote.

The Trust is not required to hold annual meetings of shareholders for the purpose of electing Trustees except that (i) the Trust is required to hold a shareholder meeting for the election of Trustees at such time as less than a majority of the Trustees holding office have been elected by shareholders and (ii) if, as a result of a vacancy on the Board, less than two-thirds of the Trustees holding office have been elected by the shareholders, that vacancy may only be filled by a vote of the shareholders. In addition, a Trustee may be removed from office by a written consent signed by the holders of Shares representing two-thirds of the outstanding Shares of the Trust at a meeting duly called for the purpose, which meeting must be held upon written request of not less than 10% of the outstanding Shares of the Trust. Upon written request by the holders of Shares representing 1% of the outstanding Shares of the Trust stating that such shareholders wish to communicate with the other shareholders for the purpose of obtaining the signatures necessary to demand a meeting to consider removal of a Trustee, the Trust will provide a list of shareholders or disseminate appropriate materials (at the expense of the requesting shareholders). Except as set forth above, a Trustee may continue to hold office and may appoint successor Trustees.

Shareholder inquiries regarding the Fund should be directed to the Trust, c/o Gemini Fund Service, LLC, 80 Arkay Drive, Suite 110, Hauppauge, NY 11788.

Additional Information on Purchases, Exchanges and Redemptions

Class C Shares may be purchased, exchanged with other Class C Shares within the Complex, or redeemed by contacting the Trust or your investment professional. Class C Shares may also be offered through other financial intermediaries.

Class A Shares of the Fund may be purchased, exchanged or redeemed by contacting the Trust or your investment professional. Class A Shares may also be offered through other financial intermediaries.

Institutional Shares may be purchased only through fiduciary, advisory, agency and other similar accounts maintained by or on behalf of Rational or its affiliates or correspondent banks as well as similar customers of third party financial institutions. Individuals who receive Institutional Shares as a result of a Trust distribution or similar transaction or by

operation of law, will be permitted to retain such Shares, but may not purchase additional Institutional Shares, except by means of the reinvestment of dividends or distributions. Exchanges of Institutional Shares, if permitted by the account agreement, as well as redemptions of Institutional Shares, are made by contacting the Trust.

Telephone purchase, exchange or redemption requests may be recorded and will be binding upon an investor. Use of the telephone for exchanges or redemptions involves the possible risk of loss, since anyone providing the required information may be able to use the service without the shareholder's permission. If reasonable procedures are not followed by the Trust, it may be liable for losses due to unauthorized or fraudulent telephone instructions.

In times of extreme economic or market conditions, shareholders may have difficulty making redemptions or exchanges by telephone. If a shareholder cannot make contact by telephone, redemption or exchange requests should be made in writing and sent by overnight mail to the Trust.

In connection with certain redemption or exchange requests, a shareholder may be required to obtain a signature guarantee for authentication purposes. Only New Technology Medallion imprints will be accepted as signature guarantees.

Other Purchase Information

Purchases of all classes of Shares are made at NAV, plus (for Class A Shares only) any applicable sales charge. All purchases are subject to minimum purchase requirements, but these requirements may be waived by the Distributor. Payment for Class A Shares and Class C Shares may not be by third party check, and any checks drawn from a bank located outside the U.S. will result in a delay in processing until the check has cleared.

If at any time the right to purchase Shares is suspended, although no new purchases may be made, in some circumstances existing shareholders may be permitted to purchase additional Shares and have dividends reinvested.

Payment in Kind. In addition to payment by check, Shares of the Fund may be purchased by customers of the Advisor in exchange for securities held by an investor which are acceptable to that Fund. Investors interested in exchanging securities must first telephone the Fund at 800-253-0412 for instructions regarding submission of a written description of the securities the investor wishes to exchange. Within five business days of the receipt of the written description, the Fund will advise the investor by telephone whether the securities to be exchanged are acceptable to the Fund whose Shares the investor desires to purchase and will instruct the investor regarding delivery of the securities. There is no charge for this review. Securities which have been accepted by the Fund must be delivered within five days following acceptance.

Securities accepted by the Fund are valued in the manner and on the days described in the section entitled "Determination of Net Asset Value" as of 4:00 p.m. (Eastern Time).

The value of the securities to be exchanged and of the Shares of the Fund may be higher or lower on the day Fund Shares are offered than on the date of receipt by the Fund of the written description of the securities to be exchanged. The basis of the exchange of such securities for Shares of the Fund will depend on the value of the securities and the NAV of Fund Shares next determined following acceptance on the day Fund Shares are offered. Securities to be exchanged must be accompanied by a transmittal form which is available from the Fund.

A gain or loss for federal income tax purposes may be realized by the investor upon the securities exchange depending upon the cost basis of the securities tendered. All interest, dividends, subscription or other rights with respect to accepted securities which go "ex" (the interval between the announcement and the payments of the next dividend or right) after the time of valuation become the property of the Fund and must be delivered to the Fund by the investor forthwith upon receipt from the issuer. Further, the investor must represent and agree that all securities offered to the Fund are not subject to any restrictions upon their sale by the Fund under the Securities Act of 1933, or otherwise.

Reinstatement Privilege. Every shareholder has a one-time right, within 60 days of redeeming Class A Shares the Fund, to reinvest the redemption proceeds at the next-determined NAV in Class A Shares without any sales charge. The investor must notify the Trust in writing of the reinvestment by the shareholder in order to eliminate a sales charge.

If the shareholder redeems Class A Shares and utilizes the reinstatement privilege, there may be tax consequences.

Other Exchange Information

Exchanges may only be made between Funds having identical shareholder registrations. For any other exchanges you must obtain a New Technology Medallion Signature Guarantee.

Unless otherwise specified in writing, the existing registration and reinvestment options relating to the Fund being exchanged will be used for any new Fund accounts required to be opened in the exchange.

Exchanges will not be available for Shares purchased by check until the check has cleared.

Other Redemption Information

Redemptions of all classes of Shares are made at NAV, less any applicable contingent deferred sales charge (CDSC). If you make exchanges of your Class A Shares among the Funds, the holding period for purposes of determining the applicable CDSC will be determined based on the purchase date of your original Shares.

If a shareholder wishes to wire redemption proceeds to a bank other than the one previously designated, redemption may be delayed by as much as seven days. To change the name of the bank account to which redemption proceeds will be wired, a shareholder should send a written request (and, if necessary, with a New Technology Medallion Signature Guarantee) to the Trust, P.O. Box 6110, Indianapolis, IN 46206-6110.

Proceeds from the redemption of Shares purchased by check will not be available until the check has cleared.

Redemption in kind. Although the Fund intends to pay Share redemptions in cash, they reserve the right, as described below, to pay the redemption price in whole or in part by a distribution of the Fund's portfolio securities.

Because the Fund has elected to be governed by Rule 18f-1 under the 1940 Act, the Fund is obligated to pay Share redemptions to any one shareholder in cash only up to the lesser of \$250,000 or 1% of the net assets represented by such Share class during any 90-day period.

Any Share redemption payment greater than this amount will also be in cash unless the Fund determines that payment should be in kind. In such a case, the Fund will pay all or a portion of the remainder of the redemption in portfolio securities, valued in the same way as the Fund determines its NAV. The portfolio securities will be selected in a manner that the Fund's Trustees deem fair and equitable and, to the extent available, such securities will be readily marketable.

Redemption in kind is not as liquid as a cash redemption. If redemption is made in kind, shareholders receiving the portfolio securities and selling them before their maturity could receive less than the redemption value of the securities and could incur certain transaction costs.

NET ASSET VALUE

Net asset value per share is determined by dividing the total value of the Fund's assets, less any liabilities, by the number of shares of the Fund outstanding.

The NAV per share of the Fund is determined by the Administrator as of the close of regular trading on the New York Stock Exchange (normally 4:00 p.m., EST) on each day when the New York Stock Exchange is open for trading. The New York Stock Exchange is closed on the following holidays: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day as observed.

Assets for which market quotations are available are valued as follows: (a) each listed security is valued at its closing price obtained from the respective primary exchange on which the security is listed, or, if there were no sales on that day, at its last reported current bid price; (b) each unlisted security is valued at the last current bid price obtained from the National Association of Securities Dealers Automated Quotation System; (c) United States Government and agency obligations are valued based upon bid quotations from the Federal Reserve Bank for identical or similar obligations; (d) short-term money market instruments (such as certificates of deposit, bankers' acceptances and commercial paper) are most often valued by bid quotation or by reference to bid quotations of available yields for similar instruments of issuers with similar credit ratings. All of these prices are obtained by the Administrator from

services, which collect and disseminate such market prices. Bid quotations for short-term money market instruments reported by such a service are the bid quotations reported to it by the major dealers.

Certain securities may be valued on the basis of valuations provided by an independent pricing service when such prices the Advisor believes reflect the fair value of such securities. These securities would normally be those, which have no available recent market value, have few outstanding shares and therefore infrequent trades, or for which there is a lack of consensus on the value, with quoted prices covering a wide range. The lack of consensus would result from relatively unusual circumstances such as no trading in the security for long periods of time, or a company's involvement in merger or acquisition activity, with widely varying valuations placed on the company's assets or stock. Prices provided by an independent pricing service may be determined without exclusive reliance on quoted prices and may take into account appropriate factors such as institutional-size trading in similar groups of securities, yield, quality, coupon rate, maturity, type of issue, trading characteristics and other market data.

In the absence of an ascertainable market value, assets are valued at their fair value as determined by the Fund's Advisor using methods and procedures reviewed and approved by the Trustees.

Short-term securities with remaining maturities of sixty days or less for which market quotations and information pricing service are not readily available are valued either at amortized cost or at original cost plus accrued interest, both of which approximate current value.

Exchange Privilege

As described in the Fund's Prospectus under "How To Redeem Shares—Exchanging Shares," the Fund offers an exchange privilege pursuant to which a shareholder in the Fund may exchange some or all of his shares in any of the funds in the Trust advised by the Advisor, in the same class shares at net asset value. The exchange privilege may be changed or discontinued upon 60 days' written notice to shareholders and is available only to shareholders where such exchanges may be legally made. A shareholder considering an exchange should obtain and read the prospectus of the Fund and consider the differences between it and the Fund whose shares he owns before making an exchange. For further information on how to exercise the exchange privilege, contact the Transfer Agent.

TAX INFORMATION

The Fund has qualified, and intends to continue to qualify, as a regulated investment company, or "RIC", under the Internal Revenue Code of 1986, as amended (the "Code"). Qualification generally will relieve the Fund of liability for federal income taxes. If for any taxable year the Fund does not qualify for the special tax treatment afforded regulated investment companies, all of its taxable income will be subject to federal tax at regular corporate rates (without any deduction for distributions to its shareholders). In such event, dividend distributions would be taxable to shareholders to the extent of the Fund's earnings and profits, and would be eligible for the dividends-received deduction for corporations.

The Fund's net realized capital gains from securities transactions will be distributed only after reducing such gains by the amount of any available capital loss carryforwards. Capital losses incurred in tax years beginning after December 22, 2010 may now be carried forward indefinitely and retain the character of the original loss. Under previously enacted laws, capital losses could only be carried forward to offset any capital gains for eight years, and carried forward as short-term capital, irrespective of the character of the original loss. Capital loss carryforwards are available to offset future realized capital gains. To the extent that these carryforwards are used to offset future capital gains it is probable that the amount offset will not be distributed to shareholders.

For taxable years beginning after December 31, 2012, certain U.S. shareholders, including individuals and estates and trusts, will be subject to an additional 3.8% Medicare tax on all or a portion of their "net investment income," which should include dividends from the Fund and net gains from the disposition of shares of the Fund. U.S. shareholders are urged to consult their own tax advisors regarding the implications of the additional Medicare tax resulting from an investment in the Fund.

Payments to a shareholder that is either a foreign financial institution ("FFI") or a non-financial foreign entity ("NFFE") within the meaning of the Foreign Account Tax Compliance Act ("FATCA") may be subject to a generally

nonrefundable 30% withholding tax on: (a) income dividends paid by a Fund after June 30, 2014 and (b) certain capital gain distributions and the proceeds arising from the sale of Fund shares paid by the Fund after December 31, 2016. FATCA withholding tax generally can be avoided: (a) by an FFI, subject to any applicable intergovernmental agreement or other exemption, if it enters into a valid agreement with the IRS to, among other requirements, report required information about certain direct and indirect ownership of foreign financial accounts held by U.S. persons with the FFI and (b) by an NFFE, if it: (i) certifies that it has no substantial U.S. persons as owners or (ii) if it does have such owners, reports information relating to them. A Fund may disclose the information that it receives from its shareholders to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of a Fund fails to provide the Fund with appropriate certifications or other documentation concerning its status under FATCA.

INVESTMENTS IN FOREIGN SECURITIES

The Fund may be subject to foreign withholding taxes on income from certain foreign securities. This, in turn, could reduce the Fund's income dividends paid to you.

Pass-Through of Foreign Tax Credits. The Fund may be subject to certain taxes imposed by the countries in which it invests or operates. If the Fund qualifies as a regulated investment company and if more than 50% of the value of the Fund's total assets at the close of any taxable year consists of stocks or securities of foreign corporations, the Fund may elect, for U.S. federal income tax purposes, to treat any foreign taxes paid by the Fund that qualify as income or similar taxes under U.S. income tax principles as having been paid by the Fund's shareholders. It is not likely that the Fund will be able to do so. For any year for which the Fund makes such an election, each shareholder will be required to include in its gross income an amount equal to its allocable share of such taxes paid by the Fund and the shareholders will be entitled, subject to certain limitations, to credit their portions of these amounts against their U.S. federal income tax liability, if any, or to deduct their portions from their U.S. taxable income, if any. No deduction for foreign taxes may be claimed by individuals who do not itemize deductions. In any year in which it elects to "pass through" foreign taxes to shareholders, the Fund will notify shareholders within 60 days after the close of the Fund's taxable year of the amount of such taxes and the sources of its income. Furthermore, the amount of the foreign tax credit that is available may be limited to the extent that dividends from a foreign corporation qualify for the lower tax rate on "qualified dividend income."

Effect of Foreign Debt Investments and Hedging on Distributions. Under the Code, gains or losses attributable to fluctuations in exchange rates, which occur between the time the Fund accrues receivables or liabilities denominated in a foreign currency, and the time the Fund actually collects such receivables or pays such liabilities, generally are treated as ordinary income or ordinary loss. Similarly, on disposition of debt securities denominated in a foreign currency and on disposition of certain options and futures contracts, gains or losses attributable to fluctuations in the value of foreign currency between the date of acquisition of the security or contract and the date of disposition also are treated as ordinary gain or loss. These gains when distributed are taxable to you as ordinary income, and any losses reduce the Fund's ordinary income otherwise available for distribution to you. This treatment could increase or decrease the Fund's ordinary income distributions to you, and may cause some or all of the Fund's previously distributed income to be classified as a return of capital. A return of capital generally is not taxable to you, but reduces the tax basis of your shares in the Fund. Any return of capital in excess of your basis, however, is taxable as a capital gain.

PFIC securities. The Fund may invest in securities of foreign entities that could be deemed for tax purposes to be passive foreign investment companies (PFICs). In general, a foreign corporation is classified as a PFIC if at least one-half of its assets constitute investment-type assets, or 75% or more of its gross income is investment-type income. When investing in PFIC securities, the Fund may elect to mark-to-market a PFIC and recognize any gains at the end of its fiscal and excise (described above) tax years. Deductions for losses are allowable only to the extent of any current or previously recognized gains. These gains (reduced by allowable losses) are treated as ordinary income that the Fund is required to distribute, even though it has not sold the securities. You should also be aware that distributions from a PFIC are generally not eligible for the reduced rate of tax on "qualified dividend income." In the alternative, the Fund may elect to treat the PFIC as a "qualified electing fund" (a "QEF election"), in which case the Fund would be required to include its share of the company's income and net capital gains annually, regardless of whether it receives distributions from the company. The QEF and mark-to-market elections may require the Fund to sell

securities it would have otherwise continued to hold in order to make distributions to shareholders to avoid any Fund-level tax. Income from investments in PFICs generally will not qualify for treatment as qualified dividend income.

BACKUP WITHHOLDING

The Fund may be required to withhold U.S. federal income tax at the fourth lowest tax rate applicable to unmarried individuals of all reportable payments, including dividends, capital gain distributions and redemptions payable to shareholders who fail to provide the Fund with their correct taxpayer identification number or to make required certifications, or who have been notified by the IRS that they are subject to backup withholding. Corporate shareholders and certain other shareholders specified in the Code generally are exempt from such backup withholding. Backup withholding is not an additional tax. Any amounts withheld may be credited against the shareholder's U.S. federal income tax liability.

Other Reporting and Withholding Requirements. Payments to a shareholder that is either a foreign financial institution ("FFI") or a non-financial foreign entity ("NFFE") within the meaning of the Foreign Account Tax Compliance Act ("FATCA") may be subject to a generally nonrefundable 30% withholding tax on: (a) income dividends paid by the Fund after June 30, 2014 and (b) certain capital gain distributions and the proceeds arising from the sale of Fund shares paid by the Fund after December 31, 2016. FATCA withholding tax generally can be avoided: (a) by an FFI, subject to any applicable intergovernmental agreement or other exemption, if it enters into a valid agreement with the IRS to, among other requirements, report required information about certain direct and indirect ownership of foreign financial accounts held by U.S. persons with the FFI and (b) by an NFFE, if it: (i) certifies that it has no substantial U.S. persons as owners or (ii) if it does have such owners, reports information relating to them. The Fund may disclose the information that it receives from its shareholders to the IRS, non-U.S. taxing authorities or other parties as necessary to comply with FATCA. Withholding also may be required if a foreign entity that is a shareholder of the Fund fails to provide the Fund with appropriate certifications or other documentation concerning its status under FATCA.

Foreign Shareholders

The United States imposes a withholding tax (at a 30% or lower treaty rate) on all Fund dividends of ordinary income. Capital gain dividends paid by the Fund from its net long-term capital gains and exempt-interest dividends are generally exempt from this withholding tax. The American Jobs Creation Act of 2004 (2004 Tax Act) amends these withholding tax provisions to exempt most dividends paid by the Fund from short-term capital gains and U.S. source interest income to the extent such gains and income would be exempt if earned directly by the non-U.S. investor. Under 2004 Tax Act, ordinary dividends designated as short-term capital gain dividends and interest-related dividends designated as a payment out of qualified interest income will generally not be subject to a U.S. withholding tax, *provided* you certify you are a non-U.S. investor. These exemptions from withholding are effective for distributions of income earned by the Fund in its fiscal years beginning after December 31, 2004 and ending before January 1, 2008. The 2004 Tax Act also provides a partial exemption from U.S. estate tax for shares in the Fund held by the estate of a non-U.S. decedent. The amount treated as exempt is based on the proportion of assets in the Fund at the end of the quarter immediately preceding the decedent's death that would be exempt if held directly by the non-U.S. investor. This provision applies to decedents dying after December 31, 2004 and before January 1, 2008.

Please be aware that the U.S. tax information contained in this Statement of Additional Information is not intended or written to be used, and cannot be used, for the purpose of avoiding U.S. tax penalties.

DIVIDENDS AND DISTRIBUTIONS

The Funds will declare and distribute dividends from net investment income of each class of Shares, if any, and will distribute its net realized capital gains, with respect to each class of Shares, if any, at least annually.

FINANCIAL STATEMENTS

The Fund has not yet commenced operations and, therefore, has not produced financial statements. Once produced, you can obtain a copy of the financial statements contained in the Fund's Annual or Semi-Annual Report without charge by calling the Fund at 1-800-253-0412.

APPENDIX A

INVESTMENT RATINGS

A.M. BEST

LONG-TERM DEBT RATINGS

Investment Grade

Aaa: Exceptional

aa: Very Strong

a: Strong

bbb: Adequate

Non-Investment Grade

Bb: Speculative

b: Very Speculative

ccc, cc, c: Extremely Speculative

d: In Default

SHORT-TERM DEBT RATINGS

Investment Grade

AMB-1+: Strongest

AMB-1: Outstanding

AMB-2: Satisfactory

AMB-3: Adequate

Non-Investment Grade

AMB-4: Speculative

D: In Default

FITCH

LONG-TERM DEBT RATINGS

Investment grade

AAA: the best quality companies, reliable and stable

AA: quality companies, a bit higher risk than AAA

A: economic situation can affect finance

BBB: medium class companies, which are satisfactory at the moment

Non-investment grade

BB: more prone to changes in the economy

B: financial situation varies noticeably

CCC: currently vulnerable and dependent on favorable economic conditions to meet its commitments

CC: highly vulnerable, very speculative bonds

C: highly vulnerable, perhaps in bankruptcy or in arrears but still continuing to pay out on obligations

D: has defaulted on obligations and Fitch believes that it will generally default on most or all obligations

NR: not publicly rated

SHORT-TERM DEBT RATINGS

Fitch's short-term ratings indicate the potential level of default within a 12-month period.

F1+ : best quality grade, indicating exceptionally strong capacity of obligor to meet its financial commitment

F1: best quality grade, indicating strong capacity of obligor to meet its financial commitment

F2: good quality grade with satisfactory capacity of obligor to meet its financial commitment

F3: fair quality grade with adequate capacity of obligor to meet its financial commitment but near term adverse conditions could impact the obligor's commitments
B: of speculative nature and obligor has minimal capacity to meet its commitment and vulnerability to short term adverse changes in financial and economic conditions
C: possibility of default is high and the financial commitment of the obligor are dependent upon sustained, favorable business and economic conditions
D: the obligor is in default as it has failed on its financial commitments.

Fitch also uses intermediate +/- modifiers for each category between AA and CCC (e.g., AA+, AA, AA-, A+, A, A-, BBB+, BBB, BBB-, etc.).

MOODY'S

GLOBAL LONG-TERM RATING SCALE

Aaa: Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa: Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A: Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa: Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba: Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B: Obligations rated B are considered speculative and are subject to high credit risk.

Caa: Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca: Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C: Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category. Additionally, a "(hyb)" indicator is appended to all ratings of hybrid securities issued by banks, insurers, finance companies, and securities firms.

Moody's differentiates structured finance ratings from fundamental ratings (i.e., ratings on nonfinancial corporate, financial institution, and public sector entities) on the global long-term scale by adding (sf) to all structured finance ratings. The (sf) indicator was introduced on August 11, 2010 and explained in a special comment entitled, "Moody's Structured Finance Rating Scale." The addition of (sf) to structured finance ratings should eliminate any presumption that such ratings and fundamental ratings at the same letter grade level will behave the same. The (sf) indicator for structured finance security ratings indicates that otherwise similarly rated structured finance and fundamental securities may have different risk characteristics.

GLOBAL SHORT-TERM RATING SCALE

P-1 Issuers (or supporting institutions) rated Prime-1: have a superior ability to repay short-term debt obligations.

P-2 Issuers (or supporting institutions) rated Prime-2: have a strong ability to repay short-term debt obligations.

P-3 Issuers (or supporting institutions) rated Prime-3: have an acceptable ability to repay short-term obligations.

NP Issuers (or supporting institutions) rated Not Prime: do not fall within any of the Prime rating categories.

US MUNICIPAL SHORT-TERM DEBT OBLIGATION RATINGS

MIG 1: This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

MIG 2: This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

MIG 3: This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established. **SG** This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

STANDARD AND POORS

AAA: An obligation rated 'AAA' has the highest rating assigned by Standard & Poor's. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA: An obligation rated 'AA' differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

A: An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB: An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

BB; B; CCC; CC; and C

Obligations rated 'BB', 'B', 'CCC', 'CC', and 'C' are regarded as having significant speculative characteristics. 'BB' indicates the least degree of speculation and 'C' the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB: An obligation rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

B: An obligation rated 'B' is more vulnerable to nonpayment than obligations rated 'BB', but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

CCC: An obligation rated 'CCC' is currently vulnerable to nonpayment, and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC An obligation rated 'CC' is currently highly vulnerable to nonpayment.

C: A 'C' rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the 'C' rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument's terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

D: An obligation rated 'D' is in payment default. The 'D' rating category is used when payments on an obligation are not made on the date due, unless Standard & Poor's believes that such payments will be made within five business days, irrespective of any grace period. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation's rating is lowered to 'D' upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

NR: This indicates that no rating has been requested, that there is insufficient information on which to base a rating, or that Standard & Poor's does not rate a particular obligation as a matter of policy.

***The ratings from 'AA' to 'CCC' may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.**

Appendix B

CONTEXT INSURANCE STRATEGIES, LLC

A. Proxy Voting and Corporate Actions

As a fiduciary, an investment adviser with proxy voting authority has a duty to monitor corporate events and to vote proxies and corporate actions as well as a duty to cast votes in the best interest of clients and not subrogate client interests to its own interests. Rule 206(4)-6 under the Advisers Act (the “Proxy Voting Rule”) places specific requirements on registered investment advisers with proxy voting authority. Because Context Insurance Strategies has been delegated the authority to vote and execute proxies for financial instruments owned by the Fund or a client or to delegate such voting authority to a third party per the Investment Management Agreement. Accordingly, Context Insurance Strategies is subject to the Proxy Voting Rule. These policies and procedures are reasonably designed to ensure that Context Insurance Strategies votes proxies in the best interest of the Fund and address how to resolve any conflict of interest that may arise when voting proxies.

Employees who receive proxies, notifications or other correspondence concerning voting on corporate events involving companies in which Context Insurance Strategies or the Fund have or have had investments should promptly forward such correspondence to the COO.

1. General Policy

Context Insurance Strategies’ general policy is to vote proxy proposals, corporate actions, amendments, consents or resolutions relating to the Fund’s securities, including interests in private investment funds, if any, (collectively, “proxies”) in a manner that serves the best interests of the Fund, a Private Fund, or a client as determined by Context Insurance Strategies in its discretion, taking into account relevant factors including but not limited to:

- a) the impact on the value of the securities;
- b) the anticipated costs and benefits associated with the proposal;
- c) the effect on liquidity; and
- d) customary industry and business practices.

2. Routine Matters

Routine matters are typically proposed by Management (as defined below) of a company and meet the following criteria:

- a) they do not measurably change the structure, management, control or operation of the company;
- b) they do not measurably change the terms of or fees or expenses associated with an investment in the company; and
- c) they are consistent with customary industry standards and practices as well as the laws of the state of incorporation applicable to the company. Routine matters include, but are not limited to, the election or re-election of board members, appointment of auditors, and other general matters such as setting the time and location of an annual meeting and changing the name of the company.

For routine matters, the Firm will vote in accordance with the recommendation of the company’s management, directors, general partners, managing members or trustees (collectively,

“Management”), as applicable unless, in Context Insurance Strategies’ opinion, such recommendation is not in the best interests of the Fund.

3. Non-Routine Matters

Non-routine matters involve a variety of issues and may be proposed by a company’s Management, or beneficial owners (i.e., shareholders, members, partners, etc.). These proxies may involve one or more of the following:

- a) a measurable change in the structure, management, control or operation of the company;
- b) a measurable change in the terms of or fees or expenses associated with an investment in the company; or
- c) a change that is inconsistent with industry standards and/or the laws of the state of incorporation applicable to the company.

Non-routine matters include, but are not limited to, term limits of board members, liability of board members, ownership issues, reincorporation, debt issuance, mergers or acquisitions, and termination or liquidation of the company. For non-routine matters, Context Insurance Strategies will generally vote in accordance with the recommendation of the company’s Management; however, such proxies related to non-routine matters may be voted on a case-to-case basis in the best interests of the Fund, a Private Fund, or a client (as determined by portfolio managers and analysts whose responsibilities include coverage of the sector for which the proxies are being voted).

4. Social Issues

These proposals range from divestment from geographical or industrial representation to environmental or other matters, either internal or external. Context Insurance Strategies’ policy is that the merit of the social issues should not take precedence over financial ones. Context Insurance Strategies will consider voting for issues that have redeeming social merit that neither compromises the company’s competitive position within an industry, nor adversely impacts the goal of maximizing shareholder value.

5. Abstaining from Voting or Affirmatively Not Voting

Context Insurance Strategies will abstain from voting (which generally requires submission of a proxy voting card) or affirmatively decide not to vote if it determines that abstaining or not voting is in the best interests of the Fund. In making such a determination, Context Insurance Strategies will consider various factors, including but not limited to: (i) the costs associated with exercising the proxy (e.g. translation or travel costs); and (ii) any legal restrictions on trading resulting from the exercise of a proxy. Context Insurance Strategies will not abstain from voting or affirmatively decide not to vote a proxy if the Fund is a plan asset fund subject to the requirements of the Employee Retirement Income Security Act of 1974, as amended.

6. Conflicts of Interest

At times, conflicts may arise between the interests of the Fund, a Private Fund, or a client on the one hand and the interests of the Firm or its affiliates on the other hand. If Context Insurance Strategies determines that it, or the Firm, has or may be perceived to have a conflict of interest when voting a proxy, Context Insurance Strategies will address matters involving such conflicts of interest as follows:

- a) If a proposal is addressed by the specific policies herein, Context Insurance Strategies will vote in accordance with such policies;

- b) If Context Insurance Strategies believes it is in the best interest of the Fund, a Private Fund, or a client to depart from the specific policies provided for herein, it would be subject to the requirements of C or D below, as applicable;
- c) If the proxy proposal is (1) not addressed by the specific policies or (2) requires a case-by-case determination by Context Insurance Strategies, Context Insurance Strategies may vote such proxy as it determines to be in the best interest of the Fund, a Private Fund, or a client without taking any action described in D below, provided that such vote would be against the Firm's own interest in the matter (i.e., against the perceived or actual conflict). Context Insurance Strategies will memorialize the rationale of such vote in writing; and
- d) If the proxy proposal is (1) not addressed by the specific policies or (2) requires a case-by-case determination by Context Insurance Strategies and Context Insurance Strategies believes it should vote in a way that may also benefit or be perceived to benefit its own interest, then Context Insurance Strategies must take one of the following actions in voting such proxy: (a) delegate the voting decision for such proxy proposal to an independent third party; (b) delegate the voting decision to an independent committee of partners, members, directors, or other representatives of the fund, or account, as applicable; (c) inform the Fund, the Private Fund, or the client of the conflict of interest and obtain consent to vote the proxy as recommended by Context Insurance Strategies; or (d) obtain approval of the decision from the CCO or COO.

7. Procedures for Proxies

- a) The COO will be responsible for determining whether each proxy is for a "routine" matter or not, as described above. All proxies identified as "routine" will be voted by the COO in accordance with this policy.
- b) The COO will determine how to vote each proxy that is clearly not "routine" by applying this policy. The COO is responsible for the voting of proxies and the maintenance of any such records.
- c) In the event Context Insurance Strategies determines that the Fund, a Private Fund, or a client should rely on the advice of an independent third party or a committee regarding the voting of a proxy, Context Insurance Strategies will submit the proxy to such third party or committee for a decision. Context Insurance Strategies will execute the proxy in accordance with such third party's or committee's decision.

8. Record of Proxy Voting

- a) Context Insurance Strategies will maintain or have available written or electronic copies of each proxy statement received and of each executed proxy.
- b) Context Insurance Strategies will also maintain records relating to each proxy including (i) the determination as to whether the proxy was routine or not; (ii) the voting decision with regard to each proxy; and (iii) any documents created by the Portfolio Manager or Context Insurance Strategies (or others) that were material to making the voting decision.
- c) Context Insurance Strategies will maintain a record of each written request from a Client for proxy voting information and the written response to any request (oral or written) from an investor in the Fund or a Private Fund for proxy voting information.
- d) Context Insurance Strategies will maintain such records in its offices for two years and for an additional three years in an easily accessible place.

The COO is responsible for ensuring, if requested, that investors are provided with (i) a description of Context Insurance Strategies' proxy voting policies and procedures and (ii) instructions about how investors may obtain information from Context Insurance Strategies on how it voted with respect to the Fund's securities. The CCO is responsible for responding to requests from investors regarding how proxies were voted.

B. Class Action Notifications

Employees who receive notifications or other correspondence concerning legal proceedings or class actions involving companies in which Context Insurance Strategies or the Fund, a Private Fund, or a client have or have had investments should promptly forward such correspondence to the COO. The COO will determine whether Context Insurance Strategies should join or otherwise participate in such class action or litigation in light of the relative costs and benefits of doing so.
